

# Study plan

## Name of study plan: Open Informatics - Computer Graphics

Faculty/Institute/Others: Faculty of Electrical Engineering  
 Department: Department of Computer Graphics and Interaction  
 Branch of study guaranteed by the department:  
 Garant of the study branch: prof. Ing. Jiří Žára, CSc.  
 Program of study: Open Informatics  
 Type of study: Follow-up master full-time  
 Required credits: 85  
 Elective courses credits: 35  
 Sum of credits in the plan: 120  
 Note on the plan:

Name of the block: Compulsory courses in the program  
 Minimal number of credits of the block: 49  
 The role of the block: P

Code of the group: 2018\_MOIDIP  
 Name of the group: Diploma Thesis  
 Requirement credits in the group: In this group you have to gain 25 credits  
 Requirement courses in the group: In this group you have to complete 1 course  
 Credits in the group: 25  
 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BDIP25	Diploma Thesis	Z	25	22s	L	P

### Characteristics of the courses of this group of Study Plan: Code=2018\_MOIDIP Name=Diploma Thesis

BDIP25	Diploma Thesis	Z	25	Independent final comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or her branch of study, which will be specified by branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the comprehensive final examination.		
--------	----------------	---	----	---	--	--

Code of the group: 2018\_MOIP  
 Name of the group: Compulsory subjects of the programm  
 Requirement credits in the group: In this group you have to gain 24 credits  
 Requirement courses in the group: In this group you have to complete 4 courses  
 Credits in the group: 24  
 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M35KO	<b>Combinatorial Optimization</b> Zdeněk Hanzálek <b>Zdeněk Hanzálek</b> Zdeněk Hanzálek (Gar.)	Z,ZK	6	3P+2C	L	P
B4M33PAL	<b>Advanced algorithms</b> Marko Genyk-Berezovskij, Daniel Průša <b>Daniel Průša</b> Daniel Průša (Gar.)	Z,ZK	6	2P+2C	Z	P
B4MSVP	<b>Software or Research Project</b> Ivan Jelínek, Jaroslav Sloup, Martin Šipoš, Drahomíra Hejtmánová, Jana Zichová, Petr Pošík, Martin Hlinovský, Katarína Ťakušová <b>Jaroslav Sloup</b>	KZ	6		Z,L	P
B4M01TAL	<b>Theory of Algorithms</b> Marie Demlová, Natalie Žukovec <b>Marie Demlová</b> Marie Demlová (Gar.)	Z,ZK	6	3P+2S	L	P

### Characteristics of the courses of this group of Study Plan: Code=2018\_MOIP Name=Compulsory subjects of the programm

B4M35KO	Combinatorial Optimization	Z,ZK	6	The goal is to show the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term operations research). Following the courses on linear algebra, graph theory, and basics of optimization, we show optimization techniques based on graphs, integer linear programming, heuristics, approximation algorithms and state space search methods. We focus on application of optimization in stores, ground transportation, flight transportation, logistics, planning of human resources, scheduling in production lines, message routing, scheduling in parallel computers.		
---------	----------------------------	------	---	---	--	--

B4M33PAL	Advanced algorithms Basic graph algorithms and graph representation. Combinatorial algorithms. Application of formal languages theory in computer science - pattern matching.	Z,ZK	6
B4MSVP	Software or Research Project	KZ	6
B4M01TAL	Theory of Algorithms The course brings theoretical background of the theory of algorithms with the focus at first on the time and space complexity of algorithms and problems, secondly on the correctness of algorithms. Further it is dealt with the theory of complexity; the classes P, NP, NP-complete, PSPACE and NPSpace are treated and properties of them investigated. Probabilistic algorithms are studied and the classes RP and ZPP introduced.	Z,ZK	6

Name of the block: Compulsory courses of the specialization

Minimal number of credits of the block: 36

The role of the block: PO

Code of the group: 2018\_MOIPO3

Name of the group: Compulsory subjects of the branch

Requirement credits in the group: In this group you have to gain 36 credits

Requirement courses in the group: In this group you have to complete 6 courses

Credits in the group: 36

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M39APG	<b>Algorithms of Computer Graphics</b> Jiří Žára, Jiří Bittner <b>Jiří Žára</b> Jiří Žára (Gar.)	Z,ZK	6	2P+2C	Z	PO
B4M39DPG	<b>Data Structures for Computer Graphics</b> Jiří Bittner, Vlastimil Havran <b>Vlastimil Havran</b> Vlastimil Havran (Gar.)	Z,ZK	6	2P+2S	Z	PO
B4M33GVG	<b>Geometry of Computer Vision and Graphics</b> Martin Matoušek, Tomáš Pajdla <b>Tomáš Pajdla</b> Tomáš Pajdla (Gar.)	Z,ZK	6	2P+2C	L	PO
B4M39MMA	<b>Multimedia and Computer Animation</b> Roman Berka <b>Roman Berka</b> Roman Berka (Gar.)	Z,ZK	6	2P+2L	Z	PO
B4M39VIZ	<b>Visualization</b> Pavel Slavík, Ladislav Čmolík <b>Ladislav Čmolík</b> Ladislav Čmolík (Gar.)	Z,ZK	6	2P+2C	L	PO
B4M39VG	<b>Computational Geometry</b> Petr Felkel <b>Petr Felkel</b> Petr Felkel (Gar.)	Z,ZK	6	2P+2S	Z	PO

Characteristics of the courses of this group of Study Plan: Code=2018\_MOIPO3 Name=Compulsory subjects of the branch

B4M39APG	Algorithms of Computer Graphics In this course you will get acquainted with basic problems and their solutions in computer graphics. The main topic of the course are graphics primitives in 2D and 3D for modeling and rendering, color models, image representations, and basic photorealistic rendering algorithms.	Z,ZK	6
B4M39DPG	Data Structures for Computer Graphics This course provides you with the fundamentals of data structures commonly used in computer graphics. In contrast to standard binary search trees used in one dimension, the presented theory focuses on multidimensional data used to describe 3D scenes. In addition to the theory, the course emphasizes individual and team projects, where the importance and advantages of multidimensional data are demonstrated on practical examples. The students will gain practical experience through their own individual projects.	Z,ZK	6
B4M33GVG	Geometry of Computer Vision and Graphics We will explain fundamentals of image and space geometry including Euclidean, affine and projective geometry, the model of a perspective camera, image transformations induced by camera motion, and image normalization for object recognition. The theory will be demonstrated on practical task of creating mosaics from images, measuring the geometry of objects by a camera, and reconstructing geometrical properties of objects from their projections. We will build on linear algebra and optimization and lay down foundation for other subjects such as computational geometry, computer vision, computer graphics, digital image processing and recognition of objects in images.	Z,ZK	6
B4M39MMA	Multimedia and Computer Animation The course is focused on methods often applied in the area of computer animation. Students will get an overview of algorithms and methods solving typical problems of 3D animation (inverse kinematics, animation of human body, dynamics, etc.). Part of the course is devoted to principles used during creative work with sound. The last part of lectures will give information about methods and technologies used in movie production (MOCAP, stereoscopy, visual effects).	Z,ZK	6
B4M39VIZ	Visualization In this course, you will get the knowledge of theoretical background for visualization and the application of visualization in real-world examples. The visualization methods are aimed at exploiting both the full power of computer technologies and the characteristics (and limits) of human perception. Well-chosen visualization methods can help to reveal hidden dependencies in the data that are not evident at the first glance. This in turn enables a more precise analysis of the data, or provides a deeper insight into the core of the particular problem represented by the data.	Z,ZK	6
B4M39VG	Computational Geometry The goal of computational geometry is analysis and design of efficient algorithms for determining properties and relations of geometric entities. The lecture focuses on geometric search, point location, convex hull construction for sets of points in d-dimensional space, searching nearest neighbor points, computing intersection of polygonal areas, geometry of parallelograms. New directions in algorithmic design. Computational geometry is applied not only in geometric applications, but also in common database searching problems.	Z,ZK	6

Name of the block: Elective courses

Minimal number of credits of the block: 0

**Characteristics of the courses of this group of Study Plan: Code=2018\_MOIH Name=Humanities subjects**

B0M16FIL	Philosophy 2	Z,ZK	5
The course is oriented on the transdisciplinary aspects of philosophy, informatics, physics, mathematics and biology.			
B0M16HVT	History of science and technology 2	Z,ZK	5
This subject traces historical developments in electrical engineering branches in the world and in the Czech Lands. Its ultimate goal is to stimulate students' interest in the history and traditions of the subject, while highlighting the developments in technical education and professional organizations, the process of shaping scientific life and the influence of technical engineers			
B0M16HSD1	History of economy and social studies	Z,ZK	5
This subject deals with the history of the Czech society in the 19th - 21th centuries. It follows the forming of the Czech political representation, its aims and achieved results as well as the social and cultural development and coexistence of the various ethnical groups in the Czech countries.			
B0M16PSM	Psychology	Z,ZK	5
B0M16TEO	Theology	Z,ZK	5
This subject provides to students the basic orientation in christian theology and requires no special previous education. After short philosophic lecture the basic theologic disciplines are gone through. The subject is determined not only to believer students who want to know the reliable theologic grounding but also above all to ones who want to get know Christianity - religion from which grows our civilization up.
