

# Study plan

## Name of study plan: Open Informatics - Computer Engineering

Faculty/Institute/Others: Faculty of Electrical Engineering  
 Department: Department of Control Engineering  
 Branch of study guaranteed by the department:  
 Garant of the study branch: prof. Dr. Ing. Zdeněk Hanzálek  
 Program of study: Open Informatics  
 Type of study: Follow-up master full-time  
 Required credits: 85  
 Elective courses credits: 35  
 Sum of credits in the plan: 120  
 Note on the plan:

Name of the block: Compulsory courses in the program  
 Minimal number of credits of the block: 49  
 The role of the block: P

Code of the group: 2018\_MOIDIP  
 Name of the group: Diploma Thesis  
 Requirement credits in the group: In this group you have to gain 25 credits  
 Requirement courses in the group: In this group you have to complete 1 course  
 Credits in the group: 25  
 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BDIP25	Diploma Thesis	Z	25	22s	L	P

### Characteristics of the courses of this group of Study Plan: Code=2018\_MOIDIP Name=Diploma Thesis

BDIP25	Diploma Thesis				Z	25
Independent final comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or her branch of study, which will be specified by branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the comprehensive final examination.						

Code of the group: 2018\_MOIP  
 Name of the group: Compulsory subjects of the programm  
 Requirement credits in the group: In this group you have to gain 24 credits  
 Requirement courses in the group: In this group you have to complete 4 courses  
 Credits in the group: 24  
 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M35KO	<b>Combinatorial Optimization</b> Zdeněk Hanzálek	Z,ZK	6	3P+2C	L	P
B4M33PAL	<b>Advanced algorithms</b> Marko Genyk-Berezovskij, Daniel Průša, Daniel Průša, Daniel Průša (Gar.)	Z,ZK	6	2P+2C	Z	P
B4MSVP	<b>Software or Research Project</b> Martin Šipoš, Drahomíra Hejtmánová, Jaroslav Sloup, Jana Zichová, Petr Pošík, Martin Hlinovský, Katarína Āakušová, Jaroslav Sloup	KZ	6		Z,L	P
B4M01TAL	<b>Theory of Algorithms</b>	Z,ZK	6	3P+2S	L	P

### Characteristics of the courses of this group of Study Plan: Code=2018\_MOIP Name=Compulsory subjects of the programm

B4M35KO	Combinatorial Optimization				Z,ZK	6
The goal is to show the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term operations research). Following the courses on linear algebra, graph theory, and basics of optimization, we show optimization techniques based on graphs, integer linear programming, heuristics, approximation algorithms and state space search methods. We focus on application of optimization in stores, ground transportation, flight transportation, logistics, planning of human resources, scheduling in production lines, message routing, scheduling in parallel computers.						

B4M33PAL	Advanced algorithms Basic graph algorithms and graph representation. Combinatorial algorithms. Application of formal languages theory in computer science - pattern matching.	Z,ZK	6
B4MSVP	Software or Research Project	KZ	6
B4M01TAL	Theory of Algorithms The course brings theoretical background of the theory of algorithms with the focus at first on the time and space complexity of algorithms and problems, secondly on the correctness of algorithms. Further it is dealt with the theory of complexity; the classes P, NP, NP-complete, PSPACE and NPSPACE are treated and properties of them investigated. Probabilistic algorithms are studied and the classes RP and ZPP introduced.	Z,ZK	6

Name of the block: Compulsory courses of the specialization

Minimal number of credits of the block: 36

The role of the block: PO

Code of the group: 2018\_MOIPO4

Name of the group: Compulsory subjects of the branch

Requirement credits in the group: In this group you have to gain 36 credits

Requirement courses in the group: In this group you have to complete 6 courses

Credits in the group: 36

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M38AVS	<b>Embedded Systems Application</b>	Z,ZK	6	2P+2L	L	PO
B4M36ESW	<b>Effective Software</b>	Z,ZK	6	2P+2C	L	PO
B4M34ISC	<b>Systems on Chip</b> Jiří Jakovenko, Vladimír Janíček, Jan Novák <b>Vladimír Janíček</b> Jiří Jakovenko (Gar.)	Z,ZK	6	2P+2L	Z	PO
B4M38KRP	<b>Computer Interfaces</b> Jiří Novák <b>Jiří Novák</b> Jiří Novák (Gar.)	Z,ZK	6	2P+2L	Z	PO
B4M35PAG	<b>Parallel algorithms</b> Přemysl Štěpán <b>Přemysl Štěpán</b> Přemysl Štěpán (Gar.)	Z,ZK	6	2P+2S	Z	PO
B4M35PAP	<b>Advanced Computer Architectures</b> Pavel Píša, Karel Koříš <b>Pavel Píša</b> Pavel Píša (Gar.)	Z,ZK	6	2P+2C	Z	PO

Characteristics of the courses of this group of Study Plan: Code=2018\_MOIPO4 Name=Compulsory subjects of the branch

B4M38AVS	Embedded Systems Application This course presents applications of embedded systems and their specifics. It is expected that the students have had a programming course, and thus the course is more oriented on explaining and describing the blocks and functions of embedded systems and their use in signal processing, rather than writing code. After completing this course, students should have an overview of usability and power of available processors, and their peripherals, on the basis of which, they should be able to independently design embedded systems for a wide spectrum of applications.	Z,ZK	6
B4M36ESW	Effective Software Within the course of Efficient software you will get familiar with the area of software and algorithm optimization under limited resources. The course is focused on the efficient usage of modern hardware architectures - multi-core and multi-processor systems with shared memory. Students will practically implement and use presented techniques in C and Java. Main topics are: code optimization, effective data structures and processor cache usage, data structures in multi-threaded applications and implementation of efficient network servers.	Z,ZK	6
B4M34ISC	Systems on Chip Main responsibilities of integrated circuits designer; design abstraction levels - Y chart. Specification designation, feasibility study, criteria for technology and design kits selection. Analogue and digital integrated systems design and simulation methodologies. Main features of application specific ICs - full custom design, gate arrays, standard cells, programmable array logic. Design aspects mobile and low power systems. Hardware Description languages (HDL). Logic and physical synthesis. Front End and Back End design. Floorplanning, place and route, layout, parasitic extraction, time analysis, testbenche construction and verification.	Z,ZK	6
B4M38KRP	Computer Interfaces Students are acquainted with functional principles of computers and embedded systems communication interfaces and with a design of typical peripherals. Technologies like USB, PCI, and PCI Express, wired and wireless computer and sensor networks as well as industrial distributed systems like CAN and LIN are introduced. Project oriented laboratories will allow students to become familiar with implementation of communication hardware and software into the real devices, including their support in operating systems.	Z,ZK	6
B4M35PAG	Parallel algorithms In the introductory lectures, we will focus on general approaches to design of parallel algorithms and their properties important for understanding the fundamental principles of parallel and distributed algorithms. Subsequently we will talk about fundamental parallel algorithms; typically, constituting cornerstones of algorithms for real-world problems. The laboratory exercise will be aimed at hardware platform commonly used in practice.	Z,ZK	6
B4M35PAP	Advanced Computer Architectures	Z,ZK	6

**Characteristics of the courses of this group of Study Plan: Code=2018\_MOIH Name=Humanities subjects**

B0M16FIL	Philosophy 2 The course is oriented on the transdisciplinary aspects of philosophy, informatics, physics, mathematics and biology.	Z,ZK	5
B0M16HVT	History of science and technology 2 This subject traces historical developments in electrical engineering branches in the world and in the Czech Lands. Its ultimate goal is to stimulate students' interest in the history and traditions of the subject, while highlighting the developments in technical education and professional organizations, the process of shaping scientific life and the influence of technical engineers	Z,ZK	5
B0M16HSD1	History of economy and social studies This subject deals with the history of the Czech society in the 19th - 21th centuries. It follows the forming of the Czech political representation, its aims and achieved results as well as the social and cultural development and coexistence of the various ethnical groups in the Czech countries.	Z,ZK	5
B0M16PSM	Psychology	Z,ZK	5
B0M16TEO	Theology This subject provides to students the basic orientation in christian theology and requires no special previous education. After short philosophic lecture the basic theologic disciplines are gone through. The subject is determined not only to believer students who want to know the reliable theologic grounding but also above all to ones who want to get know Christianity - religion from which grows our civilization up.	Z,ZK	5
