

Study plan

Name of study plan: Open Informatics - Software Engineering

Faculty/Institute/Others: Faculty of Electrical Engineering

Department: Department of Computer Science

Branch of study guaranteed by the department:

Garantor of the study branch: doc. Ing. Miroslav Bureš, Ph.D.

Program of study: Open Informatics

Type of study: Follow-up master full-time

Required credits: 85

Elective courses credits: 35

Sum of credits in the plan: 120

Note on the plan:

Name of the block: Compulsory courses in the program

Minimal number of credits of the block: 49

The role of the block: P

Code of the group: 2018_MOIDIP

Name of the group: Diploma Thesis

Requirement credits in the group: In this group you have to gain 25 credits

Requirement courses in the group: In this group you have to complete 1 course

Credits in the group: 25

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BDIP25	Diploma Thesis	Z	25	22s	L	P

Characteristics of the courses of this group of Study Plan: Code=2018_MOIDIP Name=Diploma Thesis

BDIP25	Diploma Thesis	Z	25	Independent final comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or her branch of study, which will be specified by branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the comprehensive final examination.		
--------	----------------	---	----	---	--	--

Code of the group: 2018_MOIP

Name of the group: Compulsory subjects of the programm

Requirement credits in the group: In this group you have to gain 24 credits

Requirement courses in the group: In this group you have to complete 4 courses

Credits in the group: 24

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M35KO	Combinatorial Optimization Zdeněk Hanzálek Zdeněk Hanzálek Zdeněk Hanzálek (Gar.)	Z,ZK	6	3P+2C	L	P
B4M33PAL	Advanced algorithms Marko Genyk-Berezovskij, Daniel Průša Daniel Průša Daniel Průša (Gar.)	Z,ZK	6	2P+2C	Z	P
B4MSVP	Software or Research Project Ivan Jelínek, Jaroslav Sloup, Martin Šipoš, Drahomíra Hejtmánová, Jana Zichová, Petr Pošík, Martin Hlinovský, Katarína Ťakušová Jaroslav Sloup	KZ	6		Z,L	P
B4M01TAL	Theory of Algorithms Marie Demlová, Natalie Žukovec Marie Demlová Marie Demlová (Gar.)	Z,ZK	6	3P+2S	L	P

Characteristics of the courses of this group of Study Plan: Code=2018_MOIP Name=Compulsory subjects of the programm

B4M35KO	Combinatorial Optimization	Z,ZK	6	The goal is to show the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term operations research). Following the courses on linear algebra, graph theory, and basics of optimization, we show optimization techniques based on graphs, integer linear programming, heuristics, approximation algorithms and state space search methods. We focus on application of optimization in stores, ground transportation, flight transportation, logistics, planning of human resources, scheduling in production lines, message routing, scheduling in parallel computers.		
---------	----------------------------	------	---	---	--	--

B4M33PAL	Advanced algorithms Basic graph algorithms and graph representation. Combinatorial algorithms. Application of formal languages theory in computer science - pattern matching.	Z,ZK	6
B4MSVP	Software or Research Project	KZ	6
B4M01TAL	Theory of Algorithms The course brings theoretical background of the theory of algorithms with the focus at first on the time and space complexity of algorithms and problems, secondly on the correctness of algorithms. Further it is dealt with the theory of complexity; the classes P, NP, NP-complete, PSPACE and NPSpace are treated and properties of them investigated. Probabilistic algorithms are studied and the classes RP and ZPP introduced.	Z,ZK	6

Name of the block: Compulsory courses of the specialization

Minimal number of credits of the block: 36

The role of the block: PO

Code of the group: 2018_MOIPO6

Name of the group: Compulsory subjects of the branch

Requirement credits in the group: In this group you have to gain 36 credits

Requirement courses in the group: In this group you have to complete 6 courses

Credits in the group: 36

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M36BSY	Introduction to Computer Security Tomáš Pevný Tomáš Pevný Tomáš Pevný (Gar.)	Z,ZK	6	2P+2C	Z	PO
B4M36DS2	Database Systems II Martin Svoboda, Martin Svoboda Martin Svoboda Martin Svoboda (Gar.)	Z,ZK	6	2P+2C	Z	PO
B4M36ESW	Effective Software Michal Sojka, David Šišlák David Šišlák David Šišlák (Gar.)	Z,ZK	6	2P+2C	L	PO
B4M35PAG	Parallel algorithms Přemysl Šůcha Přemysl Šůcha Přemysl Šůcha (Gar.)	Z,ZK	6	2P+2S	Z	PO
B4M36SWA	Software Architectures Bestoun S. Ahmed Al-Beywane, Karel Frajták, Miroslav Bureš Bestoun S. Ahmed Al-Beywane (Gar.)	Z,ZK	6	2P+2C	L	PO
B4M36ZKS	Software Quality Assurance Karel Frajták, Miroslav Bureš, Václav Rechtberger Miroslav Bureš Miroslav Bureš (Gar.)	Z,ZK	6	2P+2C	Z	PO

Characteristics of the courses of this group of Study Plan: Code=2018_MOIPO6 Name=Compulsory subjects of the branch

B4M36BSY	Introduction to Computer Security The aim of this course is to acquaint students with current security risks of operating systems and web applications, such as getting access through the network and escalation of rights. Students will gain an overview of the principles of operating systems administration minimizing security risks, writing safe applications and verifying their security, setting up firewalls and forensic analysis of already infected systems.	Z,ZK	6
B4M36DS2	Database Systems II The aim is to introduce new trends in database systems to students. We will focus primarily on the current issues of Big Data and the associated problems of distributed storage and processing of data. We will introduce a so-called basic types of NoSQL databases and also the related issue of cloud computing, data storage and distributed computations over large data files.	Z,ZK	6
B4M36ESW	Effective Software Within the course of Efficient software you will get familiar with the area of software and algorithm optimization under limited resources. The course is focused on the efficient usage of modern hardware architectures - multi-core and multi-processor systems with shared memory. Students will practically implement and use presented techniques in C and Java. Main topics are: code optimization, effective data structures and processor cache usage, data structures in multi-threaded applications and implementation of efficient network servers.	Z,ZK	6
B4M35PAG	Parallel algorithms In the introductory lectures, we will focus on general approaches to design of parallel algorithms and their properties important for understanding the fundamental principles of parallel and distributed algorithms. Subsequently we will talk about fundamental parallel algorithms; typically, constituting cornerstones of algorithms for real-world problems. The laboratory exercise will be aimed at hardware platform commonly used in practice.	Z,ZK	6
B4M36SWA	Software Architectures In this course students become familiar with the general requirements for software (SW) architecture and related quality parameters that are monitored by software architectures. Individual requirements and parameters are discussed in the context of current architectural standards and design patterns that students practically learn through exercises. In this course, besides the technology perspective on software architecture is also taken into an account the management aspect.	Z,ZK	6
B4M36ZKS	Software Quality Assurance	Z,ZK	6

Characteristics of the courses of this group of Study Plan: Code=2018_MOIH Name=Humanities subjects

B0M16FIL	Philosophy 2	Z,ZK	5
The course is oriented on the transdisciplinary aspects of philosophy, informatics, physics, mathematics and biology.			
B0M16HVT	History of science and technology 2	Z,ZK	5
This subject traces historical developments in electrical engineering branches in the world and in the Czech Lands. Its ultimate goal is to stimulate students' interest in the history and traditions of the subject, while highlighting the developments in technical education and professional organizations, the process of shaping scientific life and the influence of technical engineers			
B0M16HSD1	History of economy and social studies	Z,ZK	5
This subject deals with the history of the Czech society in the 19th - 21th centuries. It follows the forming of the Czech political representation, its aims and achieved results as well as the social and cultural development and coexistence of the various ethnical groups in the Czech countries.			
B0M16PSM	Psychology	Z,ZK	5
B0M16TEO	Theology	Z,ZK	5
This subject provides to students the basic orientation in christian theology and requires no special previous education. After short philosophic lecture the basic theologic disciplines are gone through. The subject is determined not only to believer students who want to know the reliable theologic grounding but also above all to ones who want to get know Christianity - religion from which grows our civilization up.
