

# Study plan

## Name of study plan: Open Informatics - Data Science

Faculty/Institute/Others: Faculty of Electrical Engineering  
 Department: Department of Computer Science  
 Branch of study guaranteed by the department:  
 Garantor of the study branch: prof. Ing. Filip Železný, Ph.D.  
 Program of study: Open Informatics  
 Type of study: Follow-up master full-time  
 Required credits: 85  
 Elective courses credits: 35  
 Sum of credits in the plan: 120  
 Note on the plan:

Name of the block: Compulsory courses in the program  
 Minimal number of credits of the block: 49  
 The role of the block: P

Code of the group: 2018\_MOIDIP  
 Name of the group: Diploma Thesis  
 Requirement credits in the group: In this group you have to gain 25 credits  
 Requirement courses in the group: In this group you have to complete 1 course  
 Credits in the group: 25  
 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BDIP25	Diploma Thesis	Z	25	22s	L	P

### Characteristics of the courses of this group of Study Plan: Code=2018\_MOIDIP Name=Diploma Thesis

BDIP25	Diploma Thesis				Z	25
Independent final comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or her branch of study, which will be specified by branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the comprehensive final examination.						

Code of the group: 2018\_MOIP  
 Name of the group: Compulsory subjects of the programm  
 Requirement credits in the group: In this group you have to gain 24 credits  
 Requirement courses in the group: In this group you have to complete 4 courses  
 Credits in the group: 24  
 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M35KO	Combinatorial Optimization	Z,ZK	6	3P+2C	L	P
B4M33PAL	Advanced algorithms Marko Genyk-Berezovskyj, Daniel Pr ša Daniel Pr ša Daniel Pr ša (Gar.)	Z,ZK	6	2P+2C	Z	P
B4MSVP	Software or Research Project Martin Šipoš, Drahomíra Hejtmánová, Jaroslav Sloup, Jana Zichová, Petr Pošík, Martin Hlinovský, Katarína akušová Jaroslav Sloup	KZ	6		Z,L	P
B4M01TAL	Theory of Algorithms	Z,ZK	6	3P+2S	L	P

### Characteristics of the courses of this group of Study Plan: Code=2018\_MOIP Name=Compulsory subjects of the programm

B4M35KO	Combinatorial Optimization				Z,ZK	6
The goal is to show the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term operations research). Following the courses on linear algebra, graph theory, and basics of optimization, we show optimization techniques based on graphs, integer linear programming, heuristics, approximation algorithms and state space search methods. We focus on application of optimization in stores, ground transportation, flight transportation, logistics, planning of human resources, scheduling in production lines, message routing, scheduling in parallel computers.						

B4M33PAL	Advanced algorithms Basic graph algorithms and graph representation. Combinatorial algorithms. Application of formal languages theory in computer science - pattern matching.	Z,ZK	6
B4MSVP	Software or Research Project	KZ	6
B4M01TAL	Theory of Algorithms The course brings theoretical background of the theory of algorithms with the focus at first on the time and space complexity of algorithms and problems, secondly on the correctness of algorithms. Further it is dealt with the theory of complexity; the classes P, NP, NP-complete, PSPACE and NPSPACE are treated and properties of them investigated. Probabilistic algorithms are studied and the classes RP and ZPP introduced.	Z,ZK	6

Name of the block: Compulsory courses of the specialization

Minimal number of credits of the block: 36

The role of the block: PO

Code of the group: 2018\_MOIPO9

Name of the group: Compulsory subjects of the branch

Requirement credits in the group: In this group you have to gain 36 credits

Requirement courses in the group: In this group you have to complete 6 courses

Credits in the group: 36

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
B4M36DS2	<b>Database Systems II</b> Martin Svoboda, Martin Svoboda <b>Martin Svoboda</b> Martin Svoboda (Gar.)	Z,ZK	6	2P+2C	Z	PO
B4M36OSW	<b>Ontologies and Semantic Web</b> Jana Ahmad, Lama Saeeda, Miroslav Blaško, Petr K emen, Michal Med <b>Petr K emen</b> Petr K emen (Gar.)	Z,ZK	6	2P+2C	Z	PO
BE4M33SSU	<b>Statistical Machine Learning</b> Jan Drchal, Vojt ch Franc, Boris Flach <b>Vojt ch Franc</b> Boris Flach (Gar.)	Z,ZK	6	2P+2C	Z	PO
B4M36SAN	<b>Statistical Data Analysis</b> Ji í Kléma <b>Ji í Kléma</b> Ji í Kléma (Gar.)	Z,ZK	6	2P+2C	Z	PO
B4M36SMU	<b>Symbolic Machine Learning</b>	Z,ZK	6	2P+2C	L	PO
B4M39VIZ	<b>Visualization</b>	Z,ZK	6	2P+2C	L	PO

Characteristics of the courses of this group of Study Plan: Code=2018\_MOIPO9 Name=Compulsory subjects of the branch

B4M36DS2	Database Systems II The aim is to introduce new trends in database systems to students. We will focus primarily on the current issues of Big Data and the associated problems of distributed storage and processing of data. We will introduce a so-called basic types of NoSQL databases and also the related issue of cloud computing, data storage and distributed computations over large data files.	Z,ZK	6
B4M36OSW	Ontologies and Semantic Web The course "Ontologies and Semantic Web" will guide students through current trends and technologies in the semantic web field. Students will learn designing complex ontologies, thesauri, formalizing them in a suitable formal language, querying them and creating semantic web applications on their top. The second part of the course will be devoted to the efficient management of ontological data and other selected topics.	Z,ZK	6
BE4M33SSU	Statistical Machine Learning The aim of statistical machine learning is to develop systems (models and algorithms) able to learn to solve tasks given a set of examples and some prior knowledge about the task. This includes typical tasks in speech and image recognition. The course has the following two main objectives 1. to present fundamental learning concepts such as risk minimisation, maximum likelihood estimation and Bayesian learning including their theoretical aspects, 2. to consider important state-of-the-art models for classification and regression and to show how they can be learned by those concepts.	Z,ZK	6
B4M36SAN	Statistical Data Analysis This course builds on the skills developed in introductory statistics courses. It is practically oriented and gives an introduction to applied statistics. It mainly aims at multivariate statistical analysis and modelling, i.e., the methods that help to understand, interpret, visualize and model potentially high-dimensional data. It can be seen as a purely statistical counterpart to machine learning and data mining courses.	Z,ZK	6
B4M36SMU	Symbolic Machine Learning The course will explain methods through which an intelligent agent can learn, that is, improve its behavior from observed data and background knowledge. The learning scenarios will include on-line learning and learning from i.i.d. data (along with the PAC theory of learnability), as well as the active and reinforcement learning scenarios. Symbolic knowledge representations (mainly through logic and graphs) will be used where possible. The course is given in English to all students.	Z,ZK	6
B4M39VIZ	Visualization In this course, you will get the knowledge of theoretical background for visualization and the application of visualization in real-world examples. The visualization methods are aimed at exploiting both the full power of computer technologies and the characteristics (and limits) of human perception. Well-chosen visualization methods can help to reveal hidden dependencies in the data that are not evident at the first glance. This in turn enables a more precise analysis of the data, or provides a deeper insight into the core of the particular problem represented by the data.	Z,ZK	6

Name of the block: Elective courses

Minimal number of credits of the block: 0

**Characteristics of the courses of this group of Study Plan: Code=2018\_MOIH Name=Humanities subjects**

B0M16FIL	Philosophy 2	Z,ZK	5
The course is oriented on the transdisciplinary aspects of philosophy, informatics, physics, mathematics and biology.			
B0M16HVT	History of science and technology 2	Z,ZK	5
This subject traces historical developments in electrical engineering branches in the world and in the Czech Lands. Its ultimate goal is to stimulate students' interest in the history and traditions of the subject, while highlighting the developments in technical education and professional organizations, the process of shaping scientific life and the influence of technical engineers			
B0M16HSD1	History of economy and social studies	Z,ZK	5
This subject deals with the history of the Czech society in the 19th - 21th centuries. It follows the forming of the Czech political representation, its aims and achieved results as well as the social and cultural development and coexistence of the various ethnical groups in the Czech countries.			
B0M16PSM	Psychology	Z,ZK	5
B0M16TEO	Theology	Z,ZK	5
This subject provides to students the basic orientation in christian theology and requires no special previous education. After short philosophic lecture the basic theologic disciplines are gone through. The subject is determined not only to believer students who want to know the reliable theologic grounding but also above all to ones who want to get know Christianity - religion from which grows our civilization up.
