

Study plan

Name of study plan: obor Konstrukce a dopravní stavby, zaměření Inženýrské konstrukce

Faculty/Institute/Others:

Department:

Branch of study guaranteed by the department: Structural and Transportation Engineering

Garantor of the study branch: prof. Ing. Jiří Máca, CSc.

Program of study: Civil Engineering

Type of study: Follow-up master full-time

Required credits: 90

Elective courses credits: 0

Sum of credits in the plan: 90

Note on the plan: tento studijní plán platí od nástupu 2017

Name of the block: Compulsory courses

Minimal number of credits of the block: 18

The role of the block: Z

Code of the group: NK20160100

Name of the group: obor Konstrukce a dopravní stavby, 1. semestr

Requirement credits in the group: In this group you have to gain at least 15 credits

Requirement courses in the group: In this group you have to complete at least 3 courses

Credits in the group: 15

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
101MA04	Mathematics 4 Jan Chleboun, Ivana Pultarová, Michal Beneš, Jan Lama, Iva Malechová Jan Chleboun Jan Chleboun (Gar.)	Z,ZK	5	2P+2C	Z	z
132NAK	Numerical Analysis of Structures Božek Patzák, Jan Voříšek, Edita Dvořáková, Tomáš Krejčí Božek Patzák Božek Patzák (Gar.)	Z,ZK	5	2P+2C	Z	z
135GET	Geotechnics Jan Pruška, Jan Kos, Matouš Hilar, Jan Valenta, Jan Salák, Alexandr Butoví, Jan Masopust Jan Valenta Jan Pruška (Gar.)	Z,ZK	5	2P+2C		z

Characteristics of the courses of this group of Study Plan: Code=NK20160100 Name=obor Konstrukce a dopravní stavby, 1. semestr

101MA04	Mathematics 4			Z,ZK	5
132NAK	Numerical Analysis of Structures			Z,ZK	5
Variational principles of mechanics. Method of weighted residuals, conditions of convergence (continuity, integrity). Principles of FEM. Isoparametric elements, area coordinates, numerical integration. Application of method to selected 1D and 2D problems (Elasticity, heat transfer, consolidation). Algorithmic aspects of the method.					
135GET	Geotechnics			Z,ZK	5
Advanced design approaches for selected types of foundation pits and footings, design based on soil - structure interaction.					

Code of the group: NK20160200

Name of the group: obor Konstrukce a dopravní stavby, 2. semestr

Requirement credits in the group: In this group you have to gain at least 3 credits

Requirement courses in the group: In this group you have to complete at least 1 course

Credits in the group: 3

134O02K	Steel Structures 2K	Z,ZK	5

Deepening of knowledge received from courses 133NNK and 134OK01. Amplifying of theoretical knowledge in the field of steel grade selection, toughness, global analysis of structures, buckling of structural systems, joint classification, and high strength steel and demanding composite steel and concrete structures. Complementation of knowledge from fire resistance of steel and composite structures and detailed design of industrial buildings and crane girders. Design of masts, towers, chimneys, tanks, silos and pipelines, technological structures, pre-stressed steel structures and basis of design from aluminium alloys and stainless steel, and cable and membrane structures.

Code of the group: NK20160201

Name of the group: obor Konstrukce a dopravní stavby, zaměřené Inženýrské konstrukce, 2. semestr

Requirement credits in the group: In this group you have to gain at least 18 credits

Requirement courses in the group: In this group you have to complete at least 4 courses

Credits in the group: 18

Note on the group:

133B04K	Concrete Structures 4K	Z,ZK	4
134OCM2	Steel Bridges 2	Z,ZK	4

This course presents advanced information on steel bridge design in the areas of major bridges, fatigue, reconstruction, fabrication and bridge erection.

136S03K	Road construction 3D	Z,ZK	5
137Z02K	Railway structures 2K	Z,ZK	5

Track design of individual types of railway stations, structural elements of railway stations, equipment for passenger and freight transport, connection to the European railway network, modernisation and optimisation of railway lines, design of tram and metro lines, ecological impacts of rail transport.

Characteristics of the courses of this group of Study Plan: Code=NK20160100_1 Name=obor Konstrukce a dopravní stavby, povinn volitelné p edm ty, zimní semestr

102YFPL	Solid State Physics in Civil Engineering Solids, crystal structure, chemical bonds, electron microscopes, scanning tunneling microscope, atomic force microscope, diffraction, diffraction methods, semiconductors, p-n junction, photovoltaic effect, solar cells, heat and moisture transport.	Z	2
132YDDS	Dynamics of Transport Structures Understanding of the problems of the Dynamics of transport structures (especially of road bridges, railway bridges and footbridges), explanation of experimental and theoretical analysis procedures - the arrangement of an experiment "in situ", monitored parameters, measuring line, modal analysis, the monitoring systems for observation of building structure dynamics behaviour and of traffic flow characteristics, numerical methods for solving dynamical interaction between building structure and moving load, modelling of structures, traffic flow and pedestrians, dynamical wind effects, practical examples.	Z	2
132YMMO	Modern Methods of Optimization The course is aimed at an overview of numerical optimization methods applicable not only in the Civil Engineering area. The emphasis is put more on the introduction of driving principles, however, practical applications in MATLAB environment are also conducted during exercises.	Z	2
132YSEI	Seismic Engineering	Z	2
132YSSK	Reliability of Structures The course is devoted to the reliability of elements and systems. Element reliability is time dependent while the reliability of systems is of type strength-load. Complicated cases are solved by the FORM method. Two simulation methods are introduced: Monte Carlo and LHS.	Z	2
133YBEX		Z	2
133YBM2	Concrete Bridges 2	Z	2
133YPRK	Failures and Rehabilitation of Concrete Structures	Z	2
134YDKM	Timber structures and bridges Timber structures focused to national strategy of sustainable development. New timber-based materials. Structural systems of houses and bridges. Repairing and strengthening. Fire design. Production, protection, erection and maintenance. Design and evaluation of bridges, roofs structures in normal temperature and in fire.	Z	2
134YROK	Extending the Life of Steel and Timber Structures	Z	2
134YSMK	Stability and modelling of steel structures Subject YSMK covers two parts. The first one deals with stability and strength of steel plates, the second one with stability and strengths of steel frame structures. In the first part the historic collapses of steel structures are analysed including the importance of imperfections for a design of thin plated structures. Presented are principles of theory of buckling, linear and nonlinear theory of buckling of thin plates. The results are applied to the 4th class cross sections in harmony with Eurocode. Buckling due to normal, shear and local loadings including their combination is analysed in a detail. In the end the application of the results is shown together with design of necessary stiffeners. The second part is focused on member and structure stability. Possible global analysis methods are presented together with methods for compression and bending interaction for slender members. In detail, specific cases of lateral torsional buckling are explained including also tapered members.	Z	2
135YGSM		Z	2
135YZAL	Basics of mining Basic conceptions of mining, mining act, quarrying, methods of mining, shooting	Z	2
136YEES	Environmental Aspects and Esthetics of Road Structures Prognosis of the traffic demands. Development of the road network in the Czech Republic, in relation to the European Union. Benefits of the high-capacity communications. The Environmental Impact Assessment methodology. Current legislation in the Czech Republic. The multi-criterial assessment of variants. Financing of the transport infrastructure. Evaluation of the car traffic effects, the amount of traffic accidents, noise, exhalation, vibration. Means for reducing the environmental impacts. Road constructions aesthetics and the spatial impression of the route in the landscape. Current important road structures in the Czech Republic.	Z	2
136YLET	Airports Types of airports, organization, data about airports, legislature, choice notions, movement of aeroplanes, flight and touch - down, assesment longitude RWY, aerodrome code, geometric characteristics , ACN / PCN, protective zone, visual aids, traffic processes at the airport, structure of terminals and aprons, proposal airport.	Z	2
137YDKP	Diagnostics of rail transport construction Diagnostics of the railway track - Czech regulation 177/1995 as amended, regulations for assessing the operability of the lines, means of diagnostics of the railway superstructure and switches, railway substructure - ballast bed. Measurement of other track parameters. Examples of defects and shortcomings of the railway track.	Z	2
220YLPG	Geotechnical laboratory A course dealing with practical exercise on geotechnical tests in laboratory and in-situ activities (The Josef underground laboratory, http://ceg.fsv.cvut.cz). It focuses on laboratory determination of soil and rock parameters necessary for geotechnical calculations and design - basic physical and hydrophysical properties, strength and deformation parameters.	Z	2

Characteristics of the courses of this group of Study Plan: Code=NK20170200_1 Name=obor Konstrukce a dopravní stavby, povinné volitelné podle ročníku, letní semestr

101YMCD	Methods of Time Discretization	Z	2		
101YMST	Mathematical statistics for technicians	Z	2		
101YNUM	Numerical Methods	Z	2		
126YBIM	Building Information Modelling - Fundamentals Subject deals with Building Information Modeling (BIM) topic as with the modern tool for management and operation of construction projects. It is oriented to handling basic relevant software (Autodesk Revit, Autodesk Navisworks) and especially to understanding meaning of BIM in current construction business and its future and importance in specific phases of construction projects.	Z	2		
132KMAT		Z,ZK	5		
132YDSK	Diagnostics of Building Structures	Z	2		
132YMCK	Micromechanics of Cement-Based Composites	Z	2		
132YNAK	Nonlinear Analysis of Materials and Structures Students acquaint self with the concepts of linear stability and calculation of elastoplastic load capacity. Linear stability - evaluation of the critical load and buckling shape. Analysis of structures according to the 2nd order theory - equilibrium conditions on a deformed structure, initial stress matrix. Elastoplastic analysis of structures - evaluation of the limit load capacity, distribution of internal forces at the limit state - static incremental method, kinematic method. Solving stability and elastoplasticity problems by means of a general-purpose finite element program.	Z	2		
132YNA2	Numerical Analysis of Structures 2 Advanced course on finite element method. Formulation of plate elements suitable for thin and thick plates, plates on elastic foundation. Introduction to nonlinear problems: geometrical and material nonlinearity, solution methods, implementation aspects.	Z,ZK	4		
132YUPM	General Principles of Mechanics Tensors, differential operators and their application in mechanics, Gauss and Green theorems. General structure of the basic equations of linear and nonlinear statics, energy and duality. Principle of virtual work (power), variational principles (Lagrange, Castigliano, Hellinger-Reissner, Hu-Washizu) and their application to continuous and discrete models of beams, frames, plates, walls and three-dimensional bodies.	Z,ZK	4		
133YATK	Applied Theory of Structures	Z,ZK	4		

133YPNB	Fire design of concrete and masonry structures Fire design of concrete structures. Nominal and parametric fire exposures. Verification methods of fire resistance. Mechanical, thermal and physical properties of concrete and steel at elevated temperatures. Design procedures: tabulated data or testing, simplified calculation methods, advanced calculation methods. Shear torsion and anchorage of reinforcement. Spalling of concrete. Addition rules for high strength concrete. Calculation of fire design of concrete and masonry structures.	Z	2
133YRZM	Reconstruction and strengthening of bridges	Z	2
133YVHB		Z	2
134YHMK	Stainless steel and aluminium structures Subject YHMK covers two parts: the first concerns design of structures from aluminium alloys, the second deals with stainless steel structures. The first part covers introduction and practice in designing of aluminium structures. The second part covers evolution of stainless steel materials/structures and examples of realized structures. Stainless steels suitable for structures are described in a detail, including their properties. Dissimilarities in assessments of members under common loadings with respect to low-carbon steels is described for both ultimate and serviceability limit states. In the end the possibilities concerning connections of stainless steel members, erection and installation of stainless steel members are described.	Z	2
134YNDK	Load-bearing timber roof constructions	Z	2
134YPOD	Fire Resistance of Steel and Timber Structures The class gives introduction to fire modeling, fire safety and fire resistance of steel, steel-concrete composite and timber structural elements.	Z	2
134YSDO	Connections of steel and timber structures The subject allows insight and ability to apply the knowledge related to structural connections and its application by software.	Z,ZK	4
134YSKO	Special steel structures The course follows the basic education in the field of steel structures. It focuses on a design of some special construction types, includes parts: High-strength steel construction, Crane supporting structures, Silos and Rope structures.	Z,ZK	4
135YGEM	Geotechnical monitoring	Z	2
135YGZP	Environmental Geotechnics	Z	2
135YMPK	Mechanics of underground structures	Z	2
135YZKS	Soil structures	Z	2
136YMVZ	Pavement mechanics Rise and development of road pavement mechanics, fundamental data for designing, characteristics of traffic load, thermic and water relation of subbase, load-bearing capacity of subgrade, road pavement materials, pavement design methods - partition, development and possibilities. Stress and transformation analysis on road pavement construction and subgrade, pavement design specificity for different constructional types, road pavements with special loads.	Z	2
136YPPK	Intersection Highway Design Design of interchange and roundabout. Accident rate on grade intersections. Fundamentals of safe proposal, psychological preference, safety audit.	KZ	2
137YEAD	Ecological Aspects of Transport Negative impacts of noise and vibration on human. Assessment of varied transport noise Acoustic levels. Noise maps. Noise study. Traffic noise characteristics of different transport means. Propagation of noise. Ways of environment protection before adverse impacts of transport noise (urban, architectural, traffic-organizing, technical)	Z	2
137YAZS	Project - Progressive application of substructure	KZ	2

Credits in the group: 30

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
101DPM	Diploma Thesis Michal Beneš, Daniela Jarušková, Milan Bořík, Jakub Šolc, Jana Nosková Iva Malechová Daniela Jarušková (Gar.)	Z	30	24C	Z	S1
132DPM	Diploma Thesis Bořek Patzák, Michal Polák, Tomáš Plachý, Jiří Máca, Karel Pohl, Matěj Lepš, Jan Zeman, Michal Šejnoha, Petr Kabele, Milan Jirásek	Z	30	24C	Z	S1
133DPM	Diploma Thesis Michaela Frantová	Z	30	24C	Z	S1
134DPM	Diploma Thesis František Wald, Jakub Dolejš Jakub Dolejš Jakub Dolejš (Gar.)	Z	30	24C	Z	S1
135DPM	Dynamics of geotechnical structures Jan Pruška, Jan Masopust Jan Pruška Jan Pruška (Gar.)	Z	30	24C	Z	S1
136DPM	Diploma Thesis Jan Valentin Jan Valentin (Gar.)	Z	30	24C	Z	S1
137DPM	Diploma Thesis Hana Krejčířková	Z	30	24C	Z,L	S1
220DPM	Diploma Thesis Jiří Svoboda, Radek Vašíček, Jaroslav Pacovský Radek Vašíček Jiří Svoboda (Gar.)	Z	30	24C	Z	S1

Characteristics of the courses of this group of Study Plan: Code=NK20160300_1 Name=obor Konstrukce a dopravní stavby, diplomová práce

101DPM	Diploma Thesis	Z	30
132DPM	Diploma Thesis in accordance with the thesis proposal	Z	30
133DPM	Diploma Thesis in accordance with a thesis proposal	Z	30
134DPM	Diploma Thesis	Z	30
135DPM	Dynamics of geotechnical structures	Z	30
136DPM	Diploma Thesis	Z	30
137DPM	Diploma Thesis	Z	30
220DPM	Diploma Thesis Diploma thesis elaboration with possible use of geotechnical laboratory and underground facility the Josef underground laboratory (http://ceg.fsv.cvut.cz).	Z	30

List of courses of this pass:

Code	Name of the course	Completion	Credits
101DISE	Diploma Seminar	Z	4
101DPM	Diploma Thesis	Z	30
101MA04	Mathematics 4	Z,ZK	5
101YMAV	Mathematics 4 - Selective Course	Z,ZK	5
101YMCD	Methods of Time Discretization	Z	2
101YMST	Mathematical statistics for technicians	Z	2
101YNUM	Numerical Methods	Z	2
102YFPL	Solid State Physics in Civil Engineering	Z	2
Solids, crystal structure, chemical bonds, electron microscopes, scanning tunneling microscope, atomic force microscope, diffraction, diffraction methods, semiconductors, p-n junction, photovoltaic effect, solar cells, heat and moisture transport.			
126YBIM	Building Information Modelling - Fundamentals	Z	2
Subject deals with Building Information Modeling (BIM) topic as with the modern tool for management and operation of construction projects. It is oriented to handling basic relevant software (Autodesk Revit, Autodesk Navisworks) and especially to understanding meaning of BIM in current construction business and its future and importance in specific phases of construction projects.			
132DISE	Diploma Seminar in accordance with the specification	Z	4
132DPM	Diploma Thesis in accordance with the thesis proposal	Z	30
132DY02	Dynamics of structures 2	Z,ZK	4
132EADK	Experimental Analysis and Diagnostics K	KZ	3
132KMAT		Z,ZK	5
132NAK	Numerical Analysis of Structures	Z,ZK	5
Variational principles of mechanics. Method of weighted residuals, conditions of convergence (continuity, integrity). Principles of FEM. Isoparametric elements, area coordinates, numerical integration. Application of method to selected 1D and 2D problems (Elasticity, heat transfer, consolidation). Algorithmic aspects of the method.			
132YDDS	Dynamics of Transport Structures	Z	2
Understanding of the problems of the Dynamics of transport structures (especially of road bridges, railway bridges and footbridges), explanation of experimental and theoretical analysis procedures - the arrangement of an experiment "in situ?", monitored parameters, measuring line, modal analysis, the monitoring systems for observation of building structure dynamics behaviour and of traffic flow characteristics, numerical methods for solving dynamical interaction between building structure and moving load, modelling of structures, traffic flow and pedestrians, dynamical wind effects, practical examples.			
132YDSK	Diagnostics of Building Structures	Z	2
132YMCK	Micromechanics of Cement-Based Composites	Z	2
132YMMO	Modern Methods of Optimization	Z	2
The course is aimed at an overview of numerical optimization methods applicable not only in the Civil Engineering area. The emphasis is put more on the introduction of driving principles, however, practical applications in MATLAB environment are also conducted during exercises.			
132YNA2	Numerical Analysis of Structures 2	Z,ZK	4
Advanced course on finite element method. Formulation of plate elements suitable for thin and thick plates, plates on elastic foundation. Introduction to nonlinear problems: geometrical and material nonlinearity, solution methods, implementation aspects.			
132YNAK	Nonlinear Analysis of Materials and Structures	Z	2
Students acquaint self with the concepts of linear stability and calculation of elastoplastic load capacity. Linear stability - evaluation of the critical load and buckling shape. Analysis of structures according to the 2nd order theory - equilibrium conditions on a deformed structure, initial stress matrix. Elastoplastic analysis of structures - evaluation of the limit load capacity, distribution of internal forces at the limit state - static incremental method, kinematic method. Solving stability and elastoplasticity problems by means of a general-purpose finite element program.			
132YSEI	Seismic Engineering	Z	2
132YSSK	Reliability of Structures	Z	2
The course is devoted to the reliability of elements and systems. Element reliability is time dependent while the reliability of systems is of type strength-load. Complicated cases are solved by the FORM method. Two simulation methods are introduced: Monte Carlo and LHS.			
132YUPM	General Principles of Mechanics	Z,ZK	4
Tensors, differential operators and their application in mechanics, Gauss and Green theorems. General structure of the basic equations of linear and nonlinear statics, energy and duality. Principle of virtual work (power), variational principles (Lagrange, Castigliano, Hellinger-Reissner, Hu-Washizu) and their application to continuous and discrete models of beams, frames, plates, walls and three-dimensional bodies.			
133B03K	Concrete Structures 3K	Z,ZK	5
133B04K	Concrete Structures 4K	Z,ZK	4
133DISE	Diploma Seminar	Z	4
133DPM	Diploma Thesis in accordance with a thesis proposal	Z	30
133YATK	Applied Theory of Structures	Z,ZK	4
133YBEX		Z	2
133YBM2	Concrete Bridges 2	Z	2

133YPNB	Fire design of concrete and masonry structures	Z	2
Fire design of concrete structures. Nominal and parametric fire exposures. Verification methods of fire resistance. Mechanical, thermal and physical properties of concrete and steel at elevated temperatures. Design procedures: tabulated data or testing, simplified calculation methods, advanced calculation methods. Shear torsion and anchorage of reinforcement. Spalling of concrete. Addition rules for high strength concrete. Calculation of fire design of concrete and masonry structures.			
133YPRK	Failures and Rehabilitation of Concrete Structures	Z	2
133YRZM	Reconstruction and strengthening of bridges	Z	2
133YVHB		Z	2
134DISE	Diploma Seminar Semestrial project of master study.	Z	4
134DPM	Diploma Thesis	Z	30
134O02K	Steel Structures 2K	Z,ZK	5
Deepening of knowledge received from courses 133NNK and 134OK01. Amplifying of theoretical knowledge in the field of steel grade selection, toughness, global analysis of structures, buckling of structural systems, joint classification, and high strength steel and demanding composite steel and concrete structures. Complementation of knowledge from fire resistance of steel and composite structures and detailed design of industrial buildings and crane girders. Design of masts, towers, chimneys, tanks, silos and pipelines, technological structures, pre-stressed steel structures and basis of design from aluminium alloys and stainless steel, and cable and membrane structures.			
134OCM2	Steel Bridges 2	Z,ZK	4
This course presents advanced information on steel bridge design in the areas of major bridges, fatigue, reconstruction, fabrication and bridge erection.			
134YDKM	Timber structures and bridges	Z	2
Timber structures focused to national strategy of sustainable development. New timber-based materials. Structural systems of houses and bridges. Repairing and strengthening. Fire design. Production, protection, erection and maintenance. Design and evaluation of bridges, roofs structures in normal temperature and in fire.			
134YHMK	Stainless steel and aluminium structures	Z	2
Subject YHMK covers two parts: the first concerns design of structures from aluminium alloys, the second deals with stainless steel structures. The first part covers introduction and practice in designing of aluminium structures. The second part covers evolution of stainless steel materials/structures and examples of realized structures. Stainless steels suitable for structures are described in a detail, including their properties. Dissimilarities in assessments of members under common loadings with respect to low-carbon steels is described for both ultimate and serviceability limit states. In the end the possibilities concerning connections of stainless steel members, erection and installation of stainless steel members are described.			
134YNDK	Load-bearing timber roof constructions	Z	2
134YPOD	Fire Resistance of Steel and Timber Structures	Z	2
The class gives introduction to fire modeling, fire safety and fire resistance of steel, steel-concrete composite and timber structural elements.			
134YROK	Extending the Life of Steel and Timber Structures	Z	2
134YSDO	Connections of steel and timber structures	Z,ZK	4
The subject allows insight and ability to apply the knowledge related to structural connections and its application by software.			
134YSKO	Special steel structures	Z,ZK	4
The course follows the basic education in the field of steel structures. It focuses on a design of some special construction types, includes parts: High-strength steel construction, Crane supporting structures, Silos and Rope structures.			
134YSMK	Stability and modelling of steel structures	Z	2
Subject YSMK covers two parts. The first one deals with stability and strength of steel plates, the second one with stability and strengths of steel frame structures. In the first part the historic collapses of steel structures are analysed including the importance of imperfections for a design of thin plated structures. Presented are principles of theory of buckling, linear and nonlinear theory of buckling of thin plates. The results are applied to the 4th class cross sections in harmony with Eurocode. Buckling due to normal, shear and local loadings including their combination is analysed in a detail. In the end the application of the results is shown together with design of necessary stiffeners. The second part is focused on member and structure stability. Possible global analysis methods are presented together with methods for compression and bending interaction for slender members. In detail, specific cases of lateral torsional buckling are explained including also tapered members.			
135DISE	Diploma Seminar Individual geotechnical problem, solution variants, project work	Z	4
135DPM	Dynamics of geotechnical structures	Z	30
135GET	Geotechnics	Z,ZK	5
Advanced design approaches for selected types of foundation pits and footings, design based on soil - structure interaction.			
135YGEM	Geotechnical monitoring	Z	2
135YGS		Z	2
Students get acquainted with the Finite Element Method, the currently dominant tool for numerical modeling in Geotechnics. Emphasis is placed on introducing the basic principles of the Finite Element Method and their subsequent application to selected problems of Geotechnical Engineering. The course summarises the types of finite elements used in geotechnical applications, material models suitable for the description of soil deformation, and selected specifics associated with numerical modeling in geotechnics. This knowledge is further applied in the modeling of foundation, embedded walls, and stability problems.			
135YGZP	Environmental Geotechnics	Z	2
135YMPK	Mechanics of underground structures	Z	2
135YZAL	Basics of mining	Z	2
Basic conceptions of mining, mining act, quarrying, methods of mining, shooting			
135YZKS	Soil structures	Z	2
136DISE	Diploma Seminar	Z	4
136DPM	Diploma Thesis	Z	30
136S03K	Road construction 3D	Z,ZK	5
136YEES	Environmental Aspects and Esthetics of Road Structures	Z	2
Prognosis of the traffic demands. Development of the road network in the Czech Republic, in relation to the European Union. Benefits of the high-capacity communications. The Environmental Impact Assessment methodology. Current legislation in the Czech Republic. The multi-criterial assessment of variants. Financing of the transport infrastructure. Evaluation of the car traffic effects, the amount of traffic accidents, noise, exhalation, vibration. Means for reducing the environmental impacts. Road constructions aesthetics and the spatial impression of the route in the landscape. Current important road structures in the Czech Republic.			
136YLET	Airports	Z	2
Types of airports, organization, data about airports, legislature, choice notions, movement of aeroplanes, flight and touch - down, assesment longitude RWY,aerodrome code, geometric characteristics , ACN / PCN, protective zone, visual aids, traffic processes at the airport, structure of terminals and aprons, proposal airport.			

136YMVZ	Pavement mechanics	Z	2
Rise and development of road pavement mechanics, fundamental data for designing, characteristics of traffic load, thermic and water relation of subbase, load-bearing capacity of subgrade, road pavement materials, pavement design methods - partition, development and possibilities. Stress and transformation analysis on road pavement construction and subgrade, pavement design specificity for different constructional types, road pavements with special loads.			
136YPPK	Intersection Highway Design	KZ	2
Design of interchange and roundabout. Accident rate on grade intersections. Fundamentals of safe proposal, psychological preference, safety audit.			
137DISE	Diploma Seminar	Z	4
Processing and presentation of the technical themes, data completion for diploma work.			
137DPM	Diploma Thesis	Z	30
137YAZS	Project - Progressive application of substructure	KZ	2
137YDKP	Diagnostics of rail transport construction	Z	2
Diagnostics of the railway track - Czech regulation 177/1995 as amended, regulations for assessing the operability of the lines, means of diagnostics of the railway superstructure and switches, railway substructure - ballast bed. Measurement of other track parameters. Examples of defects and shortcomings of the railway track.			
137YEAD	Ecological Aspects of Transport	Z	2
Negative impacts of noise and vibration on human. Assessment of varied transport noise Acoustic levels. Noise maps. Noise study. Traffic noise characteristics of different transport means. Propagation of noise. Ways of environment protection before adverse impacts of transport noise (urban, architectural, traffic-organizing, technical)			
137Z02K	Railway structures 2K	Z,ZK	5
Track design of individual types of railway stations, structural elements of railway stations, equipment for passenger and freight transport, connection to the European railway network, modernisation and optimisation of railway lines, design of tram and metro lines, ecological impacts of rail transport.			
220DISE	Diploma Seminar	Z	4
Preparatory works on diploma thesis elaboration. Literature review, study on problematics to be solved - practical cases in geotechnical laboratory and the Josef underground laboratory (http://ceg.fsv.cvut.cz).			
220DPM	Diploma Thesis	Z	30
Diploma thesis elaboration with possible use of geotechnical laboratory and underground facility the Josef underground laboratory (http://ceg.fsv.cvut.cz).			
220YLPG	Geotechnical laboratory	Z	2
A course dealing with practical exercise on geotechnical tests in laboratory and in-situ activities (The Josef underground laboratory, http://ceg.fsv.cvut.cz). It focuses on laboratory determination of soil and rock parameters necessary for geotechnical calculations and design - basic physical and hydrophysical properties, strength and deformation parameters.
