Doporu ený pr chod studijním plánem

Název pr chodu: Master specialization Design and Programming of Embedded Systems, in English, 2021

Fakulta: Fakulta informa ních technologií

Katedra:

Pr chod studijním plánem: Master specialization Design and Programming of Embedded Systems, in English, 2021

Obor studia, garantovaný katedrou: Úvodní stránka

Garant oboru studia:

Program studia: Informatics

Typ studia: Navazující magisterské prezen ní

Poznámka k pr chodu: ~Compulsory courses of neighboring specializations can be enrolled as optional ones.

Kódování rolí pedm t a skupin pedm t :

P-povinné p edm ty programu, PO-povinné p edm ty oboru, Z-povinné p edm ty, S-povinn volitelné p edm ty, PV-povinn volitelné p edm ty, F-volitelné p edm ty odborné, V-volitelné p edm ty, T-t lovýchovné p edm ty

Kódování zp sob zakon ení predm t (KZ/Z/ZK) a zkratek semestr (Z/L): KZ - klasifikovaný zápo et, Z - zápo et, ZK - zkouška, L - letní semestr, Z - zimní semestr

NI-GLR	Games and reinforcement learning	Z,ZK	4
I he field of reinfor	cement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelligen give you both theoretical and practical background so you can participate in related research activities. Presented in English		intended to
NI-GRI	Grid Computing	Z,ZK	5
	Grid computing and gain knowledge about the world-wide network and computing infrastructure.		
	Data Mining Algorithms on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students sis is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation syst methods).		-
NIE-ADP	Architecture and Design patterns	Z,ZK	5
The aim of this cour	se is to provide students with practical knowledge of the basic principles of object-oriented design and its analysis, together with an un	derstanding of the	challenges,
	promises associated with advanced software design. In the first part of the course, students will review and deepen their knowledge o		
introduced to the pr	commonly used design patterns, which represent the best practices for solving typical software design problems. In the second part inciples of design and analysis of software architecture including classical architectural designs, component systems and some adva large distributed systems. If you need to contact the teacher of NIE-ADP, please write an e-mail to Ing. Jiri Borsky borskjir@fit.c	nced software arcl vut.cz	nitectures of
NIE-AIB	Algorithms of Information Security	Z,ZK	5
	i s algoritmy bezpe ného generování klí a kryptografickým zpracováním chybových (nejen biometrických) dat. Dále se studenti sezu ztokol (identifika pích autoptiza pích a podpicových schémat). Získají zpolosti a motodách dotokco molycza a použití strojového u		
	otokol (identifika ních, autentiza ních a podpisových schémat). Získají znalosti o metodách detekce malware a použití strojového u Taktéž se seznámí s metodami vytvá ení steganografických záznam, s metodami pro jejich vyhledávání a s útoky na n		algonimeen.
NIE-AM1	Middleware Architectures 1	Z,ZK	5
	ly new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste		
architecture and ap	ication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm of applications. This course replaces the course MIE-MDW.	iunications and hig	n avaliability
NIE-AM2	Middleware Architectures 2	Z,ZK	5
	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architecture		
	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.		

NIE-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementations		
NIE-BKO	Error Control Codes	Z,ZK	5
	Is the basic knowledge of security codes used in current systems for error detection and correction. It provides the necessary mathen des and codes for the correction of multiple errors, clusters of errors and whole syllables (bytes). Students will also learn how to imple		-
	rections for different types of transmissions (parallel, serial) when storing data in memory and when transmitting over telecommunica		
NIE-BLO	Blockchain	Z,ZK	5
	stand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platform	,	
code and deploy a	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places a	an increased emph	asis on the
relationship betwe	en blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the	students for imple	menting or
	supervising implementation of blockchain-based solutions in both academia and business.	7 71/	4
NIE-BPS	Wireless Computer Networks n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad	Z,ZK	4 Iticast and
	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle		
	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab	• •	
NIE-BVS	Embedded Security	Z,ZK	5
	knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of crypto		
and software (in err	bedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources	for securing interr	al functions
	of computer systems.		_
NIE-CPX	Complexity Theory	Z,ZK	5
Students will lear	n about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the (in)tractability of difficult problems.	theory concerning	g practical
NIE-DDW	Web Data Mining	Z,ZK	5
	arn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain		
	crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overvie		-
	in the field of social web and recommendation systems.		
NIE-DIP	Diploma Project	Z	30
NIE-DSV	Distributed Systems and Computing	Z,ZK	5
	uced to methods for coordination of processes in distributed environment characterised by nondeterministic time responses of computing		
channels. They lear	rn basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that s data and services, and safety in case of failures.	upport high availa	bility of both
NIE-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
	to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with	•	-
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.		
NIE-EHW	Embedded Hardware	Z,ZK	5
-	basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the		
systems, that profit	from their specialized structure for effective computation and acceleration. Design of fast custom computing machines is discussed,	including standard	ized means
	of internal communication, parallelism extraction and utilization in special structures and system architectures.	7 71/	
NIE-EPC	Effective C++ programming v to use the modern features of contemporary versions of the C++ programming language for software development. The course focus	Z,ZK	5 of offoctivity
	iciency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor t		ig enectivity
NIE-ESW	Embedded Software	Z,ZK	5
	e course acquainted students with the specifics of software development for embedded systems. The course covers the areas from the ba		
in C language and	d code optimizations, through typical areas as the reliable software development, embedded operating systems, signal processing, up	o to sophisticated t	echniques
	combined with artificial intelligence.		
NIE-EVY	Efficient Text Pattern Matching	Z,ZK	5
Students get knowl	edge of efficient algorithms for text pattern matching. They learn to use so called succinct data structures that are efficient in both access	s time and memory	complexity.
NIE-FME	They will be able to use the knowledge in design of applications that utilize pattern matching. Formal Methods and Specifications	Z,ZK	5
	o describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so		
	basic properties of software.		
NIE-GAK	Graph theory and combinatorics	Z,ZK	5
	ss is to introduce the most important topics in graph theory, combinatorics, combinatorial structures, discrete models and algorithms.		be not only
-	e basic principles but also on applications in problem solving and algorithm design. The topics include: generating functions, selected top		
coloring, Ramsey t	heory, introduction to probabilistic method, properties of various special classes of graphs and combinatorial structures. The theory w of combinatorics on words, formal languages and bioinformatics.	ill be also applied	in the fields
NIE-GPU	GPU Architectures and Programming	Z,ZK	5
	nowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CUI		
-	videspread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com		
	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.		
NIE-HMI	History of Mathematics and Informatics	Z,ZK	3
	es on selected topics from calculus, general algebra, number theory, numerical mathematics and logic - useful for today computer sci	-	
	ome relations between computer science and mathematical methods. Some examples of applications of mathematics to computer science and mathematical methods.		
NIE-HSC	Side-Channel Analysis in Hardware	Z,ZK	4 milior with
	dicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack ide channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and		
	he shares and any get deeper magnum power attacks ordering carries and analyzing the amount and characteristics of the side-channel	-	-
NIE-HWB	Hardware Security	Z,ZK	5
	es the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguard	•	
-	eans. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Studen	-	edge about
the cry	vptographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	of the computer.	

NIE-KOD	Data Compression	Z,ZK	5
	budded to the basic principles of data compression. They will learn the necessary theoretical background and get an overview of data		ods being
	he overview covers principles of integer coding and of statistical, dictionary, and context data compression methods. In addition, stude	-	-
	lossy data compression methods used in image, audio, and video compression.		
NIE-KOP	Combinatorial Optimization	Z,ZK	6
	ain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not on		lement but
	also to apply and evaluate heuristics for practical problems.		
NIE-KRY	Advanced Cryptology	Z,ZK	5
Students will lear	n the essentials of cryptanalysis and the mathematical principles of constructing symmetric and asymmetric ciphers. They will know t	ne mathematical p	rinciples of
random number	generators. They will have an overview of cryptanalysis methods, elliptic curve cryptography and quantum cryptography, which they ca	an apply to the inte	gration of
	their own systems or to the creation of their own software solutions.		
NIE-MCC	Multicore CPU Computing	Z,ZK	5
Students will get a	quainted in detail with hardware support and programming technologies for the creation of parallel multithreaded computations on mu	lticore processors	with shared
and virtually share	d memory, which are today the most common computing nodes of powerful computer systems. Students will gain knowledge of archit	tecturally specific o	optimization
techniques used to	reduce the decrease in computing power due to the widening performance gap between the computational requirements of multi-com	e CPUs and memo	ory interface
	throughput. On specific non-trivial multithreaded programs, students will also learn the basics of the art of creating these applica	ations.	
NIE-MKY	Mathematics for Cryptology	Z,ZK	5
	ubší znalosti o algebraických postupech ešících nejd ležit jší matematické problémy, na kterých je založena bezpe nost šifer. Zejmé		
soustavy polynom	iálních rovníc nad kone ným t lesem, problém faktorizace velkých 🛛 ísel a problém diskrétního logaritmu. Problém faktorizace bude sp	peciáln ešen i na	eliptických
	k ivkách. Studenti se rovnež seznámí s moderními šifrovacími systémy založenými na po ítání na m ížce.		
NIE-MPI	Mathematics for Informatics	Z,ZK	7
The course focuses	on selected topics from general algebra with emphasis on finite structures used in computer science. It includes topics from multi-variate	analysis, smooth c	ptimization,
and multi-variate	integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The	last topic includes	selected
numerical algorith	am and their stability analysis. The topics are completed with the demonstration of applications in computer science. The course focus	es on clear preser	ntation and
	argumentation.		
NIE-MPR	Master Project	Z	7
1. At the beginning	of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial ta	sks that should be	carried out
during the semeste	er. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end o	f the semester. 2. T	he external
supervisor enters t	he information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut.cz/s	tudent/studijni/form	nulare). The
completed and sig	ned form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the FT topic	that the student h	as reserved
is rather general,	the immediate tasks the supervisor assigns to the student for the upcoming semester should aim at fine-tuning the FT topic so that the	he FTT will be com	plete and
	approvable at the end of the semester.		
NIE-MTI	Modern Internet Technologies	Z,ZK	5
Students learn	advanced networking technologies and protocols for both local area networks and wide area networks. They get acquainted with routi	ng techniques and	l transfer
	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile	security.	
NIE-MVI	Computational Intelligence Methods	Z,ZK	5
Students will unde	stand the basic methods and techniques of computational intelligence, which are based on traditional artificial intelligence, are paralli	el in nature and ar	e applicable
to solving a wide ra	inge of problems. The subject is also devoted to modern neural networks and the ways in which they learn and neuroevolution. Students	s will learn how the	se methods
	work and how to apply them to problems related to data extraction, management, intelligence in games and optimisation, et	с.	
NIE-NON	Nonlinear Continuous Optimization and Numerical Methods	Z,ZK	5
Students will be int	roduced to nonlinear continuous optimization, principles of the most popular methods of optimization and applications of such method	s to real-world pro	blems. They
will also learn the	finite element method and the finite difference method used for solving ordinary and partial differential equations in engineering. They	will learn to solve	systems of
linear algebraic e	quations that arise from discretization of the continuous problems by direct and iterative algorithms. They will also learn to implement	these algorithms s	equentially
	as well as in parallel.		
NIE-NSS	Normalized Software Systems	ZK	5
	the foundations of normalized systems theory that studies the evolvability of modular structures based on concepts from engineering	, such as stability f	
theory and entropy	r from thermodynamics. Students will understand a set of principles that indicate where violations of stability and entropy-related issue	es occur in any giv	en software
architecture. In the	second part of the course, students learn how to construct software architectures using a set of 5 design patterns called elements. Th	ese elements prov	ide the core
functionality of info	rmation systems in terms of storing data, executing actions, workflows, connectors, and triggers, while handling violations of the stability	and entropy-relate	d principles.
	This knowledge allows students to realize new levels of evolvability in software architectures.		
NIE-NUR	User Interface Design	Z,ZK	5
	stand the theorical background of human-computer interaction and user interface (UI) design, will learn formal description of UIs, formal		
notions and proc	esures. They get acquainted with graphical, speech, and multimodal UIs. Thanks to the gained knowledge, the students will be able to	o design advanced	Uls. This
	course replaces MIE-MDW.		
NIE-PAM	Parameterized Algorithms	Z,ZK	4
	optimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often necess		
-	. We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often one	-	-
(parameter) of the	inputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity exponent	ntially in this (small) parameter
and polynomially i	n the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial tin	ne preprocessing (of the input,
which is not pos	sible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solutio	n method. We will	present a
plethora of param	eterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pre	sumably) does no	t exist. We
	will also not miss out the relations to other approaches to hard problems such as moderately exponential algorithms or approximation	n schemes.	
NIE-PDB	Advanced Database Systems	Z,ZK	5
	emselves in problems of evaluation and optimization of SQL queries. The next part of the course deals with new concepts of database		led NoSQL
	ne related new data models (XML, graph databases, column databases) and languages for working with them (XQuery, XPath, CYPH		
	the course deals with performance evaluation of database machines. This course is equivalent to the course MIE-PDB.		
NIE-PDL	Practical Deep Learning	KZ	5
	signed to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine learning using PyTorch, a popula	rning framework. T	hroughout
the course, studen	ts will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such a	as computer vision	and natural
1	language processing		

NIE-PDP	Parallel and Distributed Programming	Z,ZK	6
21st century in co	mputer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores	s. Parallel computin	ng systems
are becoming a u	biquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor	ms. Students get a	acquainted
with architectur	es of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication ope	rations, and langua	ages and
	parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and or	-	-
learn the technique	es of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course	includes a semest	er project of
	practical programming in OpenMP and MPI for solving a particular nontrivial problem.		_
NIE-PIS	Advanced Information Systems	Z,ZK	5
	notion of business process logic and its formalization, with business process roles, business rules, and data processing, with the notio		
	es and service solution of business logic. They get acquainted with these notions also for the other types of ISs. They learn about agili		U
	ce methods for implementation of these ideas in ISs. They understand modern object-oriented methodologies for modelling of busine processed data, and enterprise ISs. They will get the rules and technologies for successful implementation of IS.	ss processes, busi	ness rules,
NIE-PML	Personalized Machine Learning	Z,ZK	5
	chine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristic		
	is commonly used in applications such as recommender systems, which recommend items to users based on their personal interest		
	other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theore		
	perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial commu	-	
NIE-REV	Reverse Engineering	Z,ZK	5
Students will lear	n fundamentals of reverse engineering of computer software (methods of executing and initializing programs, organization of executa		third-party
libraries). Special	attention will be paid to C ++. Students will also become familiar with the principles of debugging tools, disassemblers and obfuscatio	n methods. Finally,	the course
	will focus on code compression and decompression and executable file reconstruction.		
NIE-ROZ	Pattern Recognition	Z,ZK	5
The aim of the n	nodule is to give a systematic account of the major topics in pattern recognition with emphasis on problems and applications of the st	atistical approach t	to pattern
recognition. Stu	udents will learn the fundamental concepts and methods of pattern recognition, including probability models, parameter estimation, a	nd their numerical	aspects.
NIE-SBF	System Security and Forensics	Z.ZK	5
	roduced to various aspects of system security (principles of endpoint security, principles of security policies, security models, authenti	I ' I	-
also learn about fe	prensic analysis as a tool for investigating security incidents (techniques used by malicious software or attackers, forensic analysis te	chniques, and the i	importance
	of memory or file system artifacts for attack analysis and detection).		
NIE-SCE1	Computer Engineering Seminar Master I	Z	4
The Seminar of Co	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to	b failures and attack	ks. Students
are approached ir	idividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	subject is work with	th scientific
articles and other p	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher	rs. The topics are n	ew for each
	semester.
