Doporu ený pr chod studijním plánem

Název pr chodu: Master Programme Informatics, unspecified Specialization, in English, 2021

Fakulta: Fakulta informa ních technologií

Katedra:

Pr chod studijním plánem: Master Programme Informatics, unspecified Specialization, in English, 2021 Obor studia, garantovaný katedrou: Úvodní stránka

Garant oboru studia:

Program studia: Informatics

Typ studia: Navazující magisterské prezen ní

Poznámka k pr chodu: In each semester, enroll in optional profiling or purely optional courses so that you gain a total of at least 120 credits and that the load is evenly distributed between semesters. That means an average of 30 credits per semester.

Kódování rolí p edm t a skupin p edm t : P-povinné p edm ty programu, PO-povinné p edm ty oboru, Z-povinné p edm ty, S-povinn volitelné p edm ty, PV-povinn volitelné p edm ty, F-volitelné p edm ty odborné, V-volitelné p edm ty, T-t lovýchovné p edm ty

Kódování zp sob zakon ení predm t (KZ/Z/ZK) a zkratek semestr (Z/L): KZ - klasifikovaný zápo et, Z - zápo et, ZK - zkouška, L - letní semestr, Z - zimní semestr

Seznam p edm t tohoto pr chodu:

Kód	Název p edm tu	Zakon ení	Kredity
DA-DMI	Data Mining	Z,ZK	6
In the past decade,	weve witnessed a huge increase in the amount of data being captured and stored. In these large datasets very useful knowledge is pr	esent, though ofter	n concealed
in the vastness of	the data. With data mining techniques patterns are automatically revealed from such large datasets. First, data mining techniques an	d applications are	discussed.
Next, we will go int	o popular predictive and descriptive data mining techniques, with applications in marketing and risk management. Also, analyses su	ch as social netwo	rk analysis,
text mining, proce	ss mining, and Big Data will be looked at. Basic programming skills in Python will be learnt. The learned concepts, techniques and p	rogramming langua	age will be

	applied and evaluated with a real-life case. Teaching takes place at University of Antwerpen. See the web page https://www.uantwerpen.be/en/study/programmes/all-programmes/digital-business-engineering/about-the-programme/study-progr	ramme/	
DA-DRS	Digital Risk And Security	Z,ZK	6
	gy has become crucial in the growth, sustainability and support of enterprises. However, the pervasive use of technologies also incur	-	
	ime, fraud, errors and ommissions. The objective of this course is to understand and analyse IT related business risks and and how formation risk management and security strategy and action plan. In the course, will first discuss the basics of IT Risk, Information Sec		
	Is and frameworks to address them. Next, we will elaborate on the IT risk management and IT security functions in an organisation.	-	-
	methods, both qualitative and quantitative. The theoretical knowledge will be applied in a group project, where students will conduct	-	-
	organisation, and present the results to the responsible managers. Guarantor and teacher: MSc. Steven De Haes, Ph.D		
DD-DIN	Digital innovation	ZK	6
	on innovation in the context of the digital, software-intensive economy. Starting from a broader perspective on innovation, both main		
	Il as alternative views from challengers, are discussed. This includes omnipresent innovation models in which IT-related innovations		-
	chains or drones) and making them available in certain business domains, which requires agility and speed of development at the so xisting value chains are challenged, is discussed with its requirement for new levels of productivity in software development. Leading		
	and international cases using guest lectures. Students of a master double degree specialisation Digital Business Engineering will a	5	
	stay at the partner university Antwerp		Ū
DD-DSG	Digital strategy and governance	ZK	6
-	s a complete and comprehensive overview of what digital governance entails and how it can be applied in practice. The course is or	-	-
	concepts and practices of digital governance, the impact of digital governance on business/IT strategic and operational alignment, a		-
	is based on the teacher's knowledge obtained in applied research projects on the relationship between digital governance practices erstanding and absorbing the material provided, the course uses short assignments and case studies. Students of a master double of	•	
	Business Engineering will attend this course during their stay at the partner university Antwerp	specialisat	lion Digital
DD-SMN	Strategic management	ZK	6
· · · · · · · · · · · · · · · · · · ·	e course, the different concepts and perspectives of strategic management are analyzed. The basic characteristics of strategic think		-
e importance of mis	ssion/vision, as the starting point in strategic thinking, is being discussed. This is being linked to the broader concept of sustainability /	corporate social re	esponsibility
	focus on the three basic dimensions of strategy: (1) the strategy content: business level strategy, corporate level strategy, and network	e , ()	
•	mation, strategic change, and strategic innovation, (3) the strategy context: the industry context, the organizational context, and the		
-	ters, the fundamental strategic management paradoxes are situated and evaluated in the strategic management theory. Attention is which can be used to manage the strategy process. Students of a master double degree specialisation Digital Business Engineering	-	-
nanagement tools w	their stay at the partner university Antwerp	will attend this co

FITE-EHD	Introduction to European Economic History	Z,ZK	3
1	es a selection of themes from European economic history. It gives the student basic knowledge about forming of the global economy		1
	s. As European countries have been dominant actors in this process it focuses predominantly on their roles in economic history. Fro	0	•
the Roman Empire	to the fragmentation of the Middle Ages, from the destruction of WWII to the current affairs, the development of modern financial in	stitutions is decipl	hered. The
course does not cov	er the detailed economic history of particular European countries but rather the impact of trade and the role of particular events, ins	titutions and orga	nizations ir
	history. Class meetings will consist of a mixture of lectures and discussions.		
FITE-SEP	World Economy and Business	Z,ZK	4
	es students of technical universities to international business. It does that predominantly by comparing individual countries and key r now about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom	0	-
0	ent, which are needed for the right investment decision. Seminars help to improve knowledge in the form of discussions based on ir	· •

NIE-ADP	Architecture and Design patterns	Z,ZK	5
	rse is to provide students with practical knowledge of the basic principles of object-oriented design and its analysis, together with an un		-
	promises associated with advanced software design. In the first part of the course, students will review and deepen their knowledge o	-	-
	t commonly used design patterns, which represent the best practices for solving typical software design problems. In the second part		
	rinciples of design and analysis of software architecture including classical architectural designs, component systems and some adva		
	large distributed systems. If you need to contact the teacher of NIE-ADP, please write an e-mail to Ing. Jiri Borsky borskjir@fit.c		
NIE-AIB	Algorithms of Information Security	Z,ZK	5
Studenti se seznán	ní s algoritmy bezpe ného generování klí a kryptografickým zpracováním chybových (nejen biometrických) dat. Dále se studenti sezn		ými principy
kryptografických pr	rotokol (identifika ních, autentiza ních a podpisových schémat). Získají znalosti o metodách detekce malware a použití strojového u	ení v detek ních a	algoritmech.
	Taktéž se seznámí s metodami vytvá ení steganografických záznam , s metodami pro jejich vyhledávání a s útoky na n		-
NIE-AM1	Middleware Architectures 1	Z,ZK	5
	dy new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste		
architecture and ap	Dication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm	nunications and hig	h availability
	of applications. This course replaces the course MIE-MDW.		
NIE-AM2	Middleware Architectures 2	Z,ZK	5
	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architecture		echnologies
	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.		
NIE-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementations		
NIE-BKO	Error Control Codes	Z,ZK	5
	ds the basic knowledge of security codes used in current systems for error detection and correction. It provides the necessary mathen	1 1	-
	des and codes for the correction of multiple errors, clusters of errors and whole syllables (bytes). Students will also learn how to imple		
	rrections for different types of transmissions (parallel, serial) when storing data in memory and when transmitting over telecommunica		
NIE-BLO	Blockchain	Z.ZK	5
	rstand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platforr	· · ·	-
	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places a		
relationship betwe	en blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the	students for imple	menting or
	supervising implementation of blockchain-based solutions in both academia and business.		
NIE-BPS	Wireless Computer Networks	Z,ZK	4
Students will lear	n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad	l-hoc networks, mu	lticast and
broadcast mecha	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle

	Formal Methods and Specifications	Z,ZK	5
Students are able	to describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so basic properties of software.	ftware tools that al	low to prove
		7 71/	
NIE-GPU	GPU Architectures and Programming cnowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CUI	Z,ZK	5
-	widespread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com		
which is alleady a	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.	iputational structur	es, siudenis
NIE-HMI	History of Mathematics and Informatics	Z,ZK	3
	es on selected topics from calculus, general algebra, number theory, numerical mathematics and logic - useful for today computer sci	, ,	-
	some relations between computer science and mathematical methods. Some examples of applications of mathematics to computer science and mathematical methods.	-	
NIE-HSC	Side-Channel Analysis in Hardware	Z,ZK	4
	edicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack	· ·	1
	ide channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and	-	
	They also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel	-	-
NIE-HWB	Hardware Security	Z,ZK	5
	es the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguard	, ,	-
	neans. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Stude	-	-
-	yptographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	-	0
NIE-KOP	Combinatorial Optimization	Z.ZK	6
-	gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not onl	, ,	-
	also to apply and evaluate heuristics for practical problems.		
NIE-KRY	Advanced Cryptology	Z,ZK	5
	n the essentials of cryptanalysis and the mathematical principles of constructing symmetric and asymmetric ciphers. They will know the		1
random number	generators. They will have an overview of cryptanalysis methods, elliptic curve cryptography and quantum cryptography, which they c	an apply to the inte	egration of
	their own systems or to the creation of their own software solutions.		
NIE-MCC	Multicore CPU Computing	Z,ZK	5
Students will get a	cquainted in detail with hardware support and programming technologies for the creation of parallel multithreaded computations on mu	Ilticore processors	with shared
and virtually share	d memory, which are today the most common computing nodes of powerful computer systems. Students will gain knowledge of archi	tecturally specific of	optimization
techniques used to	preduce the decrease in computing power due to the widening performance gap between the computational requirements of multi-cor		ory interface
	throughput. On specific non-trivial multithreaded programs, students will also learn the basics of the art of creating these application	ations.	
NIE-MKY	Mathematics for Cryptology	Z,ZK	5
	ubší znalosti o algebraických postupech ešících nejd ležit jší matematické problémy, na kterých je založena bezpe nost šifer. Zejmé		
soustavy polynom	iálních rovníc nad kone ným t lesem, problém faktorizace velkých ísel a problém diskrétního logaritmu. Problém faktorizace bude sp	peciáln ešen i na	a eliptických
	k ivkách. Studenti se rovnež seznámí s moderními šifrovacími systémy založenými na po ítání na m ížce.		1
NIE-MPI	Mathematics for Informatics	Z,ZK	7

aspects of the systems that are important for the task at hand, and automated tools for analyzing those models. This subject will present theory and algorithms that form the basis for the modeling and analysis of complex systems.

the modeling and analysis of complex systems.			
NIE-TSP	Testing and Reliability	Z,ZK	5
Students will gain knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prepare a test set with the help of			
the intuitive path sensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with built-in-self-test equipment. They			
will be able to compute, analyze, and control the reliability and availability of the designed circuits.			
NIE-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will gain knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and organizations. They will get			
acquainted with virtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficiently operate and optimize the			
performance parameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effective technology today for the			
management of complex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in the use of modern integration			
and development tools (Continuous integration and development).			
NIE-VPR	Research Project	Z	5
Student obtains the credits for published scientific outputs. The details are at https://courses.fit.cvut.cz/NI-VPR/en.			
NIE-VSM	Selected statistical Methods	Z,ZK	7
Summary of probability theory; Multivariate normal distribution; Entropy and its application to coding; Statistical tests: T-tests, goodness of fit tests, independence test; Random processes			
- stacionarity; Markov chains and limiting properties; Queuing theory			
NIE-VYC	Computability	Z,ZK	4
Classical theory of recursive functions and effective computability.
