١	The course aims at business and managerial language, as used in company management. The student's skills in foreign language speaking and writing are to be developed in the						
l	area of management ( work and motivation, company structure, managing across cultures, recruitment). The students are also acquinted with the most up-to-date professional jargon						
l	dealing with project management and project planning. Further training in the proper use of grammar structures is provided simultaneously with vocabulary extension.						

16E Economics Z,ZK 5
Introducing participants to the world economy, explaining the principles of economic thinking, illustrating the problem of resource scarcity and production effectiveness, aligning with

Introducing participants to the world economy, explaining the principles of economic thinking, illustrating the problem of resource scarcity and production effectiveness, aligning with profit maximization, distinguishing ideal and limited competition. Understanding the meaning and construction of the main macroeconomic indicators, distinguishing different economic systems, identifying the principles of government economic politics, understanding the fundamentals of fiscal and monetary policy of the government, applying macroeconomic theory to present problems of countries and integrated coalitions.

16OVL Employee Organization and Management

The aim of the subject is to connect the students' knowledge of management and project management with new information on employee organization and management. The outcome

will be a graduate qualified for employee management in practice. Topics covered are personnel planning, selection methods, team construction and making good use of team member potential. Also time management and delegation, situational management, performance evaluation and training of leading an evaluation discussion. Last third of the subject covers succession planning, motivation, influencing company culture and crisis situation solving.

16RME Regional and Local Economy Z,ZK 5

Regional and municipal economy deals with social? economic development of regions and towns. It is based on spatial application of common economic theory and regional economy. The main part of the subject is analysing the processes that lead to spatial organization of the society. Another important part is analysing the government sector of regions and towns and the possibilities of influencing by the authorities that have responsibility for development of regions and towns. The subject contains also key concepts and pieces of knowledge from the field of territorial finance, connection between territorial finance, state budget and extra-budgetary funds and then the basic structure of incomes and expenses of territorial budget with an emphasis on the budgets of municipalities and regions of Czech republic. Students will also learn the theoretical foundations of the subject, especially the localization theories.

16SRG | Socio-economic Geography

The subject helps to understand the development, current situation and the main trends in economic distribution and other social? economic activities of man on different regional levels. Students should get basics of geographical thinking, they should understand problems in territorial context and the rules of development.

16SI System Engineering Z,ZK 5

System conception, Clasification of systems. Open systems, closed systems, deterministic systems, stochastic systems, hard and soft systems. Optimization methods for systems, methods of graph theory, optimization of continuous systems, branch and bound methodology, Bellman's princip of optimization. Optimization and simulation of stochastic systems. Graphic descriptions of systems, hierarchical diagram, ER diagram, structure chart. Soft systems methodology.

16ZP Elements of Law Z,ZK 4

The purpose of education is to give students a basic understanding of legal issues that will be useful to them in an elementary way to understand the extent legal reasoning, the principles of creation, interpretation and application of the law and the relation of the public authority. Students also gain basic knowledge of selected fields of law in force, partially differentiated according to their specialization. On the basis of that knowledge should be able to graduate to know clearly contrary to fundamental legal principles and to communicate adequately with qualified attorneys.

D4JA3 | English Language 3 | Z,ZK | 2 | The course aims at business and managerial language, as used in company management. The student's skills in foreign language speaking and writing are to be developed in the area of management (work and motivation, company structure, managing across cultures, recruitment). The students are also acquinted with the most up-to-date professional jargon dealing with project management and project planning. Further training in the proper use of grammar structures is provided simultaneously with vocabulary extension. In addition to this, the aim of the course is the acquisition of language skills, writing strategies and active vocabulary. The course focuses on practical application of the given phenomena.

Methodologically, the course relies on formal language analysis, systematic development of specialised vocabulary, competent use of relevant grammar, systematic practice of typical case-study situations, teamwork and giving feedback.

16EKL	Ecology	Z	5			
Ecology - content, basic terminology; Autecology - individual and species, abiotic and biotic factors, reaction of organism on effects of abiotic factors; Demecology - population and its						
basic parameters, intras	pecific and interspecific relations, life strategy; Synecology - characteristics, evaluation of community, energy flow through ec	osystem, primary	and secondary			
production, stability of c	ommunities and ecosystems; human ecological problems.					
16ES	Economics Statistics	Z,ZK	4			
Demonstrating the way	of statistical information origin about economical and social effects and processes, the possibilities and limits of their cohesion	and practical apli	cations together			
with the options of using	statistical methods of analytical procedures in comon statistical practice.					
16FI	Investment Financing	Z,ZK	5			
Learning about the sour	ces of investment financing, the tools of short-term and long-term financing, the methods of investment evaluation, financing ir	vestment decision	on, risk instance,			
the methods of financing	g for cities and local units from European funds.					
16HSS	Economic, Social and Territorial Cohesion of the EU	Z,ZK	4			
The course deals with th	eoretical specification of the policy of economic, social and territorial cohesion in European union and its development and imp	ortance. It focuse	s on the regional			
and structural policy wit	nin particular programming periods of EU.					
16OL	Organization and Legistation of Public Administration in the Czech Republic	Z,ZK	5			
Public administration as	an important part of executive power in a state represents complex organism - its understanding is a necessary assumption for	succesfull projec	implementation			
in line with public sector	operations. The goal of this subject is to provide a compact overview of the Czech administration system, pointing out to basic	modern principle	s of determined			
architecture and to infor	m on the fundamental level about possible management forms of individual administrative authorities. The course is mainly fo	cused on state a	nd government			
administration as the mo	ost important part of the public administration.

To teach them to analyse given regions with the help of both demographic and statistical methods and to acquaint them with the demographic situation with regard to the regions of the Czech Republic and also with the demographic situation in the world with special focus on migration and its significance. 16RMF Regional and Local Economy 7.7K Regional and municipal economy deals with social? economic development of regions and towns. It is based on spatial application of common economic theory and regional economy. The main part of the subject is analysing the processes that lead to spatial organization of the society. Another important part is analysing the government sector of regions and towns and the possibilities of influencing by the authorities that have responsibility for development of regions and towns. The subject contains also key concepts and pieces of knowledge from the field of territorial finance, connection between territorial finance, state budget and extra-budgetary funds and then the basic structure of incomes and expenses of territorial budget with an emphasis on the budgets of municipalities and regions of Czech republic. Students will also learn the theoretical foundations of the subject, especially the localization 16RP Project Management The subject defines a project and a lifecycle of the projects. The organization of a project team and relations to organizations will be explained. Other subjects are planning, resource management, using software for the project management, the process of a feasibility study development. Students will practice the methods for decision making applicable to projects as the decision trees development and the problem analysis. System Engineering 16SI System conception, Clasification of systems. Open systems, closed systems, deterministic systems, stochastic systems, hard and soft systems. Optimization methods for systems, methods of graph theory, optimization of continuous systems, branch and bound methodology, Bellman's princip of optimization. Optimization and simulation of stochastic systems. Graphic descriptions of systems, hierarchical diagram, ER diagram, structure chart. Soft systems methodology. 16SR Strategic Management Z,ZK The aim of the course is to win necessary knowledge for strategy formulation, implementation and evaluation. Further aim for students is to master general knowledge in management of economical subjects and public administration institutions and understanding of basic models and instruments which are used in managerial practice. On the grounds of gained competences the students are able to process basic procedures of strategic management. Chosen business strategy is a foundation for the construction of the strategic plan. 16SRG Socio-economic Geography 5 The subject helps to understand the development, current situation and the main trends in economic distribution and other social? economic activities of man on different regional levels. Students should get basics of geographical thinking, they should understand problems in territorial context and the rules of development. Urban Planning and Regional Development **16UP** 7.7K Introduction to Urban Planning and Regional Development. System approach to settlements: components, features, infrastructure. Ecology and settlements. Fundamental environmental legislation. Culture and settlements. Regeneration of towns and conversation. Landscape and settlements. Countryside issues. Social and economic infrastructure of settlements. Humanization of housing estates. Problems of urban sprawls. Problems of brownfields. Policy of settlements and regions development. Fundamental urban planning legislation. Limits of land resources use. Perfect town. 16XBS **Balanced Scorecard** Z.ZK The aim of the course is to gain necessary knowledge for the right strategy implementation in an enterprise and by use of it to evaluate performance parameters. These performance parameters used by planning of firm's development and by results evaluation are followed in complex approach. Further the student is able to master performance parameters in business decision making processes and formulate tasks for teams which procure business internal processes. Gain knowledge are applicable for making business projects. 16XCI Competitive Intelligence The course is designed as an elective for master degree students in the field of Applied Informatics and Informatics in Business. Includes issues defining the specific information needs for support Strategic Planning of the organization, namely to find relevant information sources, including external ones, analyzing and the subsequent creation of Knowledge Base. Relevant is also effective communication of these findings to senior management of an organization. **16XD** Transport Systems The course will acquaint the students with> ?basic features of individual kinds of transport (road, railway, air, water) ?relations between transport and territory. ?transport surveys: logistics in in large territorial units, regions, towns and villages. ?reciprocal relations between a transport route and territory. ?public, individual, cargo transport (freight) ? prospective of further transport development in Europe (EU) and the Czech Republic (national transport network), the relation of urban and transport planning ?transport and environment, noise and vibration, exhaust fumes, accidents, land confiscation, energy consumption ?the impact of transport systems upon landscape and settlements ?transport and sustainability 16XDB **Description in Business** 5 Development of language knowledge and skills focusing on special purposes of the study programme with the main aim to adequately use the language in both speaking and writing. 16XDO Presentation Skills in English Z.ZK 5 Development of language knowledge and skills focusing on better comprehension and comprehensibility of speaking and presenting opinions, services, study programmes and products. 16XEF European Social Fund Z.ZK European social fund and its position among other implemets of regional development and reaching of economic and social cohesion of EU and the Czech republic. Experiences gained during the realization of operational programmes financed by ESF and Initiative Association EQUAL financed by ESF in programming period 2000 ? 2006 and their transmission to the new programming period. Implementation of programmes financed by European social fund in Czech republic. Horizontal topics of European social fund and practical examples of their accomplishment in the proces of program and ESF project management. 16XENU Z.ZK Sustainable Development: Economics and Policy 5 Z.ZK 16XFU Structures and Legislation of the European Union Content of the subject: Brief historical development of ideas concerning unification of Europe and forming of European Union. Contemporary external and internal environment of EU in globalised world. Institutions and other bodies of EU ? their characteristics, function and interrelationships between them. Basics and principles of EU legislation, the process of creating and approving and EU constitution. 16XV	English for Meetings and Negotiations	Z,ZK	5				
Consolidation and strengthening of the language skills needed for management purposes with the focus on improvement in practical communication.							
167P	Flements of Law	7 7K	4				

The purpose of education is to give students a basic understanding of legal issues that will be useful to them in an elementary way to understand the extent legal reasoning, the principles of creation, interpretation and application of the law and the relation of the public authority. Students also gain basic knowledge of selected fields of law in force, partially differentiated according to their specialization. On the basis of that knowledge should be able to graduate to know clearly contrary to fundamental legal principles and to communicate adequately with qualified attorneys.
