Start-Motors Types and Construction. Start - Motor Theory and Characteristics. Ignition Systems. Battery Ignition. Magneto Ignition and Electronic Ignition. Sensors and Converters. Servomotors and Electromagnets. Speed Motors Control and Contactless Switching of Power Load. (For Traffic Engineering Study).	Z,ZK	3
2212046	Fuels and Lubricants Characteristics and testing of gasolines, diesel a heavy fuels. Specific characteristics of alternative fuels. Engines tribology. Characteristics and testing of oils. Sediment formation in engine. Characteristics and testing of gear oils.	KZ	2

2383062	Budget and Project Economic Assessment	Z	2
The goal of the course is to improve the knowledge gained within the basic bachelor's degree course Management and Economics of the Enterprise. The course focuses primarily on deepening of basic knowledge and skills in the creation and evaluation of the operational budget, proper preparation and evaluation of costing model for manufactured products and the economic evaluation of an investment project, as it corresponds to contemporary knowledge and the development of management methods and techniques. Students specify a simple fictional industrial or engineering company or its sub-section (preferably inspired by their practical experience, internships or training program in real company). The first student's task is to prepare a detailed plan and budget of a project (e.g. new product development, product or process innovation, etc.) focused on improvement of profitability, competitiveness or effectiveness of the company. The second task is cost calculation for chosen calculation unit. Last task within this course is the evaluation of economical effectiveness of the project described within the first task. The dynamic methods like Net Present Value (NPV), Internal Rate of Return (IRR) or Discounted Payback Period (DPP) are used for this evaluation. The quality of realization and presentation of the task's outputs together with the results of the test decides on granting / denial of credit.			
2211170	Theory of Internal Combustion Engines	Z,ZK	5
Theoretical description and analysis of processes at internal combustion engines. Definition of physical models and basics of engine cycle modeling.
