Not only the significant development of science and technology has a fundamental influence on the transformation of didactic means. Nowadays, they occupy an increasingly important place in the activities of both teacher and pupil in teaching. Even in the future, it can be assumed that their position in the educational process can be strengthened as science and technology develop. Didactic means is also another basic didactic category. In this course we will focus on the basic characteristics, overview of didactic resources and didactic function and categorization of teaching aids. In many technical subjects, pupils often work in laboratories, so the didactics of laboratory work (classical, remote, virtual) and its specifics are included. We will focus in more detail on the motivation in the laboratory, preparation of laboratory tasks and tasks for practical activities and verification of students' readiness for laboratory tasks. Intensification of education currently puts the relationship between teacher and modern electronic techniques in a different position. It is necessary to address the question: "How should a good teacher use electronic learning opportunities in order to increase the didactic effectiveness of his / her pedagogical activities?".					
U51C3301	Social Psychology			ZK	6
The course is devoted to the issue of man in social situations. Students will get acquainted with basic socio-psychological knowledge that is directly or indirectly related to the teacher's activities. The dynamics of small social groups and interactions are studied, as well as issues related to communication (basics of communication, types of communication). Attention is paid to attitudes and their creation, conflicts and their solutions. Another important topic is the socialization of personality and social role. The acquisition of this knowledge at the theoretical level is associated with references to their application in the practice of teachers, especially in terms of individual approach to students, teamwork and contacts with the general public.

U63C4402	Information and Communication Technologies in Education Not only the significant development of science and technology has a fundamental influence on the transformation of didactic means. Nowadays, they occupy an increasingly important place in the activities of both teacher and pupil in teaching. Even in the future, it can be assumed that their position in the educational process can be strengthened as science and technology develop. Didactic means is also another basic didactic category. In this course we will focus on the basic characteristics, overview of didactic resources and didactic function and categorization of teaching aids. In many technical subjects, pupils often work in laboratories, so the didactics of laboratory work (classical, remote, virtual) and its specifics are included. We will focus in more detail on the motivation in the laboratory, preparation of laboratory tasks and tasks for practical activities and verification of students' readiness for laboratory tasks. Intensification of education currently puts the relationship between teacher and modern electronic techniques in a different position. It is necessary to address the question: "How should a good teacher use electronic learning opportunities in order to increase the didactic effectiveness of his / her pedagogical activities?".	Z,ZK	6
