Study plan

Name of study plan: Electronics and Communications 2018

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Branch of study guaranteed by the department: Common courses

Garantor of the study branch:

Program of study: Electronics and Communications

Type of study: Bachelor full-time

Required credits: 176
Elective courses credits: 4
Sum of credits in the plan: 180

Note on the plan:

Name of the block: Compulsory courses in the program

Minimal number of credits of the block: 156

The role of the block: P

Code of the group: 2018_BEKBAP Name of the group: Bachelor Project

Requirement credits in the group: In this group you have to gain 20 credits Requirement courses in the group: In this group you have to complete 1 course

Credits in the group: 20 Note on the group:

BEZB	Safety in Electrical Engineering for a Bachelor's Degree	Z	0						
he purpose of the safety course is to give the students basic knowledge of electrical equipment and installation as to avoid danger arising from operation of it. This introductory course									
contains fundamentals	contains fundamentals of Safety Electrical Engineering. In this way the students receive qualification of instructed person that enables them to work on electrical equipment.								
BEZZ	Basic Health and Occupational Safety Regulations	Z	0						

The guidelines were worked out based on The Training Scheme for Health and Occupational Safety designed for employees and students of the Czech Technical University in Prague, which was provided by the Rector's Office of the CTU. Safety is considered one of the basic duties of all employees and students. The knowledge of Health and Occupational Safety regulations forms an integral and permanent part of qualification requirements. This program is obligatory.

Page 3 out of 11

This course introduces students to the classical theory of ordinary differential equations (separable and linear ODEs) and also to bsics of numerical methods (errors in calculations and stability, numerical solutions of algebraic and differential equations and their systems). The course takes advantage of the synnergy between theoretical and practical point of view.

The goal of this course is to provide the introduction into designing and realization of digital circuits. First, necessary mathematical apparatus, such as the Boolean algebra, Karnaugh maps, minimization and realization of logical functions is presented, followed by brief introduction into basics of logical circuits, such as the logical gates, flip-flops, TTL and CMOS logic etc. The second part is dedicated mainly to modern designing techniques of digital circuits using programmable FPGA and VHDL language. During these lessons, the basics of VHDL together with numerous examples are evaluated to provide a complex insight into this hardware description language and modern methods of designing and realization of digital circuits.

B2B38EMB **Electrical Measurements** Methods of measurement of electrical quantities (voltage, current, power, frequency, resistance, capacitance, and inductance) are explained together with principles of their correct application and accuracy estimation. The course is closed by presenting information on several basic electronic measuring instruments and explaining the fundamentals of magnetic measurements and basic information concerning measurement systems. B2B17ELD Z,ZK Electrodynamics This subject empowers its students with a unified approach to time-varying electromagnetic fields and waves. Z.ZK B2B17EMPA Electromagnetic Field 5 This course gets its students acquinted with principles and applied electromagnetic field theory basics. Z,ZK 4 B2B31EO1 Electronic Circuits 1 The course introduces basic circuits with operational amplifiers, continues with the description of linear systems, analysis of their characteristics and fundamentals of synthesis frequency filters. It deals with the principles and features of circuits for generating signals and a controlled oscillator including the PLL circuit and its use. The last part of the course is devoted to basic amplifier stages with transistors. Z,ZK B2B34ELPA **Electron Devices** 5 This course introduces the basic theory, principles of operation and properties of electron devices. Physical principles of operation, device structures and characteristics are explained together with adequate models for small- and large-signal. Basic applications in analogue and digital electronics are examined. In seminars and labs, students are introduced to basic principles of device simulation, measurement of device characteristics and extraction of device parameters. Operation of electron devices in electronic devices is then analyzed using the PSpice simulator. B2B02FY1 Physics 1 The basic course of physics at the Faculty of Electrical Engineering - Physics 1, is devoted to the introduction into two important areas of physics. The first one is a classical mechanics and the second one is the electric and magnetic field. Within the framework of the classical mechanics, the students study the particle kinematics; dynamics of the mass particle, system of mass particles and rigid bodies. The students should be able to solve basic problems dealing with the description of mechanical systems, which they can meet during their further studies. The classical mechanics is followed by the relativistic mechanics, electric and magnetic field - both stationary as well as non-stationary. The students can use the facts gained in this course in the study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the knowledge gained in this course is required for the study of the consecutive course Physics 2 B2B02FY2 Physics 2 Z.ZK The course Physics 2 is closely linked with the course Physics 1. Within the framework of this course the students will first of all learn foundations of thermodynamics. Following topic - the theory of waves - will give to the students basic insight into the properties of waves and will help to the students to understand that the presented description of the waves has a universal character in spite of the waves character. Particular types of waves, such as acoustic or optical waves are the subjects of the following section. Quantum mechanics and nuclear physics will complete the student?s general education in physics. The knowledge gained in this course will help to the students in study of such modern areas as robotics, computer vision, measuring technique and will allow them to understand the principles of novel technologies and functioning of new electronic devices. B0B01KANA Complex Analysis Z,ZK The course is an introduction to the fundamentals of complex analysis and its applications. The basic principles of Fourier, Laplace, and Z-transform are explained, including their applications, particularly to solving differential and difference equations. B0B01LAGA Linear Algebra Z,ZK The course covers introductory topics of linear algebra. It begins with fundamental concepts related to vector spaces and linear transform (such as linear dependence and independence of vectors, bases, coordinates of vectors, etc.). The next part of the course is devoted to matrix theory (determinants, inverse matrix, matrices of linear transformation, eigenvalues and eigenvectors). Applications include solving systems of linear equations, geometry in three-dimensional space (including dot and cross products), and the singular value decomposition of a matrix. B0B01MA1A Mathematical Analysis 1 Z,ZK 6 This is an introductory course to differential and integral calculus of functions of one real variable. B0B01MA2A Z,\overline{ZK} Mathematical Analysis 2 6 The subject covers an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals. Other part contains function series and power series with application to Taylor and Fourier series. ΚZ 4 B2B34MIT Microelectronics Students become familiar with the latest trends in the field of microelectronics. The course provide students with the microelectronic structures and technologies of integrated circuits; micro sensors and micro-electro-mechanical systems. The course introduces students to the design of nanoelectronics and integrated circuits. B2B99PPC Practical C/C++ programming ΚZ 6 The course introduces students to the C++ and develops their practical skills in programming in C/C++ with an emphasis on solving computational tasks and multi-threaded applications using parallel programming. The first part of the course is devoted to the object-oriented programming in C++ and provides students with basic data containers of standard library STL. Students learn the principles of parallel programming, multi-threaded applications, synchronization mechanisms and models of multi-threaded applications. The second part is dedicated to develop an algorithmic thinking to solve computational problems by searching the problem state space. Two main approaches are considered: the deterministic search of a graph representation of the state space; and local optimization techniques. Additionally, students will be familiarized with models of arbitrary precision data representations, representation of matrices, and matrix calculations B0B99PRPA **Procedural Programming** ΚZ 4 B2BPROJ6 Bachelor project ΚZ 6 Independent work in the form of a project. A student will choose a topic from a range of topics related to his or her branch of study, which will be specified by branch department or branch departments. The project will be defended within the framework of a subject. Sesors in Electronics B2B34SEE 7.7K 4 B2B37SAS Signals and systems Z.ZK 5 Introductory course focused on a description of continuous- and discrete-time signals and systems in time and frequency domains. The course also introduces the basic characteristics of bandpass signals, analog modulations and random signals. B0B01STP Statistics and Probability Z,ZK 5 The aim of the course is to introduce students to the fundamentals of probability theory and mathematical statistics, their computational methods as well as applications of these mathematical tools to practical examples. B2B99TPS Technical Writing K7 The course aims to help students with various technical or scientific reports (lab report, article, final thesis etc.) Also important is, in addition to language and stylistic skills, to show how to obtain and present scientific information. Given are also up-to-date methods for efficient typing and document automation, including LaTeX. All topics are practiced by related tasks in the Moodle

B2B17TBK Wireless Communication Technique Wireless communications belong to the fastest developing technical fields. Besides widely used mobile telephony systems, this field also includes many other both mobile and stationary communicating systems. Different types of radio modems are also built in the majority of electronic devices like PCs, tablets, notebooks, cameras, etc. With expected fast development of Internet of Things, operation of billions of wireless sensors is expected. The subject is common to all students of the Electronics and Communication study program, its main purpose is to teach all important aspects of this technical branch. Obtained knowledge should enable the students to design, project, adjust or manufacture any wireless communication system or its components. Besides wireless system analysis, the lectures include review of physical backgrounds, survey of the most important existing radio systems together with corresponding operational frequencies, description of electromagnetic wave propagation and related antennas. Instructions concerning propagation also cover behavior of EM waves in an urban environment or inside buildings. Lectures concerning analysis of typical wireless systems also cover description of related radio-frequency, microwave and mm-wave circuits and components. Exercises include practical calculations of wireless systems, computer analysis and synthesis of important structures and circuits, and related laboratory measurements. B2B32TSI Telecommunication Systems and Networks The course introduces principles and functions of digital telecommunications systems, both transmission and switching systems as well as converged packet-oriented systems interconnected into universal telecommunication networks. B2B31ZEOA Fundamentals of Electric Circuits Z.ZK 5 The course describes the basic methods of analysis of electrical circuits. In the lectures, students are introduced to the basic active and passive circuit elements, circuit quantities, important circuit theorems and methods of circuit analysis in stationary and harmonic steady state as well as during transients caused by changes in the circuit. The seminars are aimed

I) The B2 English Exam is a compulsory subject for all Faculty of Electrical Engineering students at the Czech Technical University. According to the Study and Examination Rules and Regulations for Students at CTU (Part III, Article 4), a compulsory subject is one whose completion is a necessary condition in order to successfully complete the study programme. In addition, this requires the passing of an examination evaluated on the scale A, B, C, D, or E (SERR Part III, Article 6). II) According to the Common European Framework of Reference for Languages (CEFR), an international standard for describing language ability, the definition of an English language learner who has achieved the B2 (Upper-Intermediate) level is one who can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialisation. Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party. Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options. III) Students who have successfully passed an approved international exam within the past five years may present their certificate to the Department of Languages, Faculty of Electrical Engineering. Upon approval, students are then exempt from both the Written Test and the Oral Part. For a list of approved international exams go to the department website: http://jazyky.fel.cvut.cz/

B2B31EO2	Electronic Circuits 2	Z,ZK	4
The course builds or	n the basic electric circuits course. It introduces multistage transistor amplifiers and basic applications in the field of electronic s	ystems. Students b	ecome familiar
with design and mea	asurement of electronic systems, including nonlinear applications with regard to the real characteristics of operational amplifiers	. Next operating pri	nciples and
parameters of powe	r amplifiers, linear stabilizers, switching power supply and D/A and A/D converters are presents.		
B2B34MIK	Microcontrollers	Z,ZK	4
The goal of this cour	rse is to make students acquainted with recent interesting applications, smart sensors circuits and peripherals handled by micro	controllers. In a lab	students will
program their own a	pplications and measure actual properties. Because of usage of a programming language C it will be possible to focus on the pi	ractical part of the r	realization.
B0B37NSI	Design of IoT systems	Z,ZK	5
B2B17OKS	Optical Communication Systems	Z,ZK	4
The aim of the cours	se is to introduce students with principles of optical systems. The course covers both theoretical background of optics and practi	cal approaches for	the design of
optical systems. Stu	dents extend their knowledge from the ray optics through the matrix optics, subsequently and further by the description of optica	al systems using Ga	aussian beam
owards wave and q	uantum optics. Then students will learn the basic mechanisms and principles of fiber optics.		
B2B34OZD	Optical sources and detectors of radiation	Z,ZK	4
The aim of the cours	se is to explain the principle of optical sources, optical amplifiers and photodetectors and their technology. Then discuss their us	e for informatics an	d sensors,
ncluding optical inte	grated circuits, both from a theoretical and a broader application point of view. Attention is also paid to components for optical c	ommunication and	to componen
or physical and che	mical quantities, important measuring and diagnostic methods are given.

B2B16EPO	Business economics	KZ	4
Basic course of Bu	ness Economics deals with the subject from wide angle of view, discussing all particular aspects of Business Economics, and re	elationships betwe	een them.
B2B99EKP	Electronics and communication practically	KZ	4
The course is devo	ed to practical experiments with the ESP 32 SoC board and a set of external add-on modules. Students will get acquainted with	the rules of applic	ation design in

The course is devoted to practical experiments with the ESP 32 SoC board and a set of external add-on modules. Students will get acquainted with the rules of application design in ArduinoIDE and Visual Code Studio using libraries for operating internal and external peripherals. Sample applications are focused on standardized issues that cover the professional focus of the Electronics and Communications program. Part of the exercise will be devoted to the description of the design of printed circuit boards, their production and mounting. Students will get a board with SoC ESP32 for experimentation, which they can also use for home preparation.

List of courses of this pass:

Code	Name of the course	Completion	Credits		
B0B01DRN	Differencial Equations and Numerical Analysis	Z,ZK	4		
This course introduces students to the classical theory of ordinary differential equations (separable and linear ODEs) and also to bsics of numerical methods (errors in calculations and					
stability, numerica	l solutions of algebraic and differential equations and their systems). The course takes advantage of the synnergy between theoretic	al and practical poi	int of view.		
B0B01KANA	Complex Analysis	Z,ZK	4		
The course is an	The course is an introduction to the fundamentals of complex analysis and its applications. The basic principles of Fourier, Laplace, and Z-transform are explained, including their				
	applications, particularly to solving differential and difference equations.				
B0B01LAGA	Linear Algebra	Z,ZK	7		
The course covers i	he course covers introductory topics of linear algebra. It begins with fundamental concepts related to vector spaces and linear transform (such as linear dependence and independence				
	Linear Algebra	ependence and inc			

eigenvectors). Appl	ications include solving systems of linear equations, geometry in three-dimensional space (including dot and cross products), and the of a matrix.	singular value de	ecomposition
B0B01MA1A	Mathematical Analysis 1 This is an introductory course to differential and integral calculus of functions of one real variable.	Z,ZK	6
B0B01MA2A	Mathematical Analysis 2	Z,ZK	6
	s an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals.		1
-	series and power series with application to Taylor and Fourier series.	·	
B0B01STP	Statistics and Probability	Z,ZK	5
The aim of the c	ourse is to introduce students to the fundamentals of probability theory and mathematical statistics, their computational methods as well as the computation of the fundamental of probability theory and mathematical statistics, their computational methods as well as the computation of the fundamental of probability theory and mathematical statistics, their computational methods as well as the computation of the fundamental of the computation of th	vell as application	ns of these
	mathematical tools to practical examples.		
B0B02UAK	Introduction to Acoustic	KZ	4
· · ·	rides overview of main parts of acoustics. In first lectures there is introduction to basic types of sound fields, its solutions and propert	-	
introduction to build	ding and room acoustics. The second half of the course deals with introductions to physiological acoustics, psychoacoustics, musical and ultrasound, infrasound and their measurement.	acoustics, hygier	ne legislation
B0B04A21	English Language A2-1 The course is open to students who are beginners in their second language. Course objective: Achieving competence in basic E	Z nglish.	
B0B04A22	English Language A2-2	Z	0
The course is ope	en to students who are beginners in their second foreign language. The course objective is to develop and sustain their basic knowled	dge of the English	language.
B0B04B11	English Language B1-1	Z	0
Course objective: B	roadening the basic knowledge of general English; mastering basic specialised language; focusing on text analysis and vocabulary exp	ansion; understar	nding spoken
	English.		
B0B04B12	English Language B1-2	Z	0

The course also provides students with fundamental understanding of TCP/I the Internet era of networking, including practical experience with the data networks in laboratory. B2B32DITA Digital Technique The goal of this course is to provide the introduction into designing and realization of digital circuits. First, necessary mathematical apparatus, such as maps, minimization and realization of logical functions is presented, followed by brief introduction into basics of logical circuits, such as the logical gate etc. The second part is dedicated mainly to modern designing techniques of digital circuits using programmable FPGA and VHDL language. During the together with numerous examples are evaluated to provide a complex insight into this hardware description language and modern methods of designing B2B32PPS Network Planning and Operation The subject expands knowledge obtained in precedent studies on such issues as network planning, network design, network constructions and net telecommunications systems are developed in model tasks focused on the design of selected parts of the telecommunications network. Special atter telecommunications and to the business aspects of telecommunications. B2B32STE Network Technologies The primary task of this subject is to move further already acquired fundamental networking knowledge in the context of Data Networks subject. Stu principles of various methods to access common shared physical media, Ethernet switching technologies and WiFi networks and last but not least the networking theory as used in real practice. Students will be given a chance to get in touch with technology to implement simple routed and switched networking theory as used in real practice. Students will be given a chance to get in touch with technology to implement simple routed and swi	KZ s the Boolean algebra s, flip-flops, TTL and lese lessons, the bas g and realization of dig Z,ZK twork operation. B2B34MIK	Microcontrollers	Z,ZK	4
The goal of this co	burse is to make students acquainted with recent interesting applications, smart sensors circuits and peripherals handled by microcor		udents will
program their own applications and measure actual properties. Because of usage of a programming language C it will be possible to focus on the practical part of the realization.			
B2B34MIT Microelectronics KZ 4			
Students become familiar with the latest trends in the field of microelectronics. The course provide students with the microelectronic structures and technologies of integrated circuits;			
micro sensors and micro-electro-mechanical systems. The course introduces students to the design of nanoelectronics and integrated circuits.			
B2B34OZD	Optical sources and detectors of radiation	Z,ZK	4
	purse is to explain the principle of optical sources, optical amplifiers and photodetectors and their technology. Then discuss their use		
including optical integrated circuits, both from a theoretical and a broader application point of view. Attention is also paid to components for optical communication and to components			
for physical and chemical quantities, important measuring and diagnostic methods are given.			
B2B34SEE	Sesors in Electronics	Z,ZK	4
B2B37AVT	Audiovisual Technology	KZ	4
This course is the introduction to multimedia technology (audio and video). It overviews sound and picture acquisition, signal processing, transmission and distribution, recording and			
reproduction including physiology of hearing and vision. It provides fundamental information for understanding the main principles for system solutions in the field.			
B2B37ROZ	Radio Circuits and Devices	Z,ZK	4
	ins a basic but systematical description of fundamental types of analog and digital modulations. A description of the building blocks of		- 1
and basic types of radio receivers follows. A description of passive and active elements with non-distributed and distributed parameters follows from the point of view their usage in			
radio circuits. Attention is devoted to contemporary structures with distributed parameters, microwave transistors of various types, power unipolar transistors. A description of radio function blocks is a fundamental part of the subject: radio-frequency amplifiers and their noise properties, distributed amplifiers, power amplifiers, oscillators, phase noise, crystal			
oscillators, mixers, double and multiply-balanced mixers.			
B2B37SAS		Z,ZK	5
	Signals and systems Signals and systems in time and frequency demains. The course also introcursed an a description of continuous, and discrete time signals and systems in time and frequency demains. The course also introc	· · · · · · · · · · · · · · · · · · ·	- 1
Introductory course focused on a description of continuous- and discrete-time signals and systems in time and frequency domains. The course also introduces the basic characteristics of bandpass signals, analog modulations and random signals.			
B2B37ZST	Principles of Studio Technology	Z,ZK	4
	asic knowledge of elements and systems used in television and radio professional and semiprofessional studio technology and of technology as the company of		- 1
9.100 2	production and broadcasting. Laboratory exercises are situated in a small school studio and are completed with professional excu		
B2B38EMB	Electrical Measurements	Z.ZK	4
	urement of electrical quantities (voltage, current, power, frequency, resistance, capacitance, and inductance) are explained together v	, ,	- 1
application and accuracy estimation. The course is closed by presenting information on several basic electronic measuring instruments and explaining the fundamentals of magnetic			
measurements and basic information concerning measurement systems.			
B2B99EKP	Electronics and communication practically	KZ	4
The course is devoted to practical experiments with the ESP 32 SoC board and a set of external add-on modules. Students will get acquainted with the rules of application design in			
ArduinoIDE and Visual Code Studio using libraries for operating internal and external peripherals. Sample applications are focused on standardized issues that cover the professional			
focus of the Electronics and Communications program. Part of the exercise will be devoted to the description of the design of printed circuit boards, their production and mounting.			
Students will get a board with SoC ESP32 for experimentation, which they can also use for home preparation.			
B2B99PPC	Practical C/C++ programming	KZ	6
	ces students to the C++ and develops their practical skills in programming in C/C++ with an emphasis on solving computational tasks a		
using parallel programming. The first part of the course is devoted to the object-oriented programming in C++ and provides students with basic data containers of standard library STL.			
Students learn the principles of parallel programming, multi-threaded applications, synchronization mechanisms and models of multi-threaded applications. The second part is dedicated			
to develop an algorithmic thinking to solve computational problems by searching the problem state space. Two main approaches are considered: the deterministic search of a graph			
representation of the state space; and local optimization techniques. Additionally, students will be familiarized with models of arbitrary precision data representations, representation			
DODOOTDO	of matrices, and matrix calculations.	1/7	
B2B99TPS	Technical Writing	KZ	4
The course aims to help students with various technical or scientific reports (lab report, article, final thesis etc.) Also important is, in addition to language and stylistic skills, to show how to obtain and present scientific information. Given are also up-to-date methods for efficient typing and document automation, including LaTeX. All topics are practiced by related			
tasks in the Moodle.			
B2BPROJ6		KZ	6
	Bachelor project in the form of a project. A student will choose a topic from a range of topics related to his or her branch of study, which will be specif		
branch departments. The project will be defended within the framework of a subject.			
BBAP20	Bachelor thesis	Z	20
BEZB	Safety in Electrical Engineering for a Bachelor's Degree	Z	0
	safety course is to give the students basic knowledge of electrical equipment and installation as to avoid danger arising from operation		-
contains fundamentals of Safety Electrical Engineering. In this way the students receive qualification of instructed person that enables them to work on electrical equipment.			
BEZZ Basic Health and Occupational Safety Regulations Z 0			
The guidelines were worked out based on The Training Scheme for Health and Occupational Safety designed for employees and students of the Czech Technical University in Prague,			
-	d by the Rector's Office of the CTU. Safety is considered one of the basic duties of all employees and students of the Gzech i	-	- 1
provido	regulations forms an integral and permanent part of qualification requirements. This program is obligatory.
