# Characteristics of the courses of this group of Study Plan: Code=BI-PP.21 Name=Compulsory Courses of Bachelor Study Program Informatics, presented in Czech, version 2021

BI-AG1.21 Algorithms and Graphs 1	Z,ZK	5			
The course covers the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing of	urriculum. It links a	and partially			
develops the knowledge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the	ne time and space	complexity of			
algorithms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asymptotic notat	tion.				
BI-AAG.21 Automata and Grammars	Z,ZK	5			
Students are introduced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of fini	ite automata, regu	lar expressions,			
and regular grammars, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know	the hierarchy of fo	ormal languages			
and they understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity classes F	P and NP.				
BI-BAP.21 Bachelor Thesis	Z	14			
BI-BPR.21 Bachelor project	Z	1			
1. At the beginning of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	e partial tasks tha	t he / she will			
perform during the semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR	at the end of the	semester. 2. The			
external supervisor enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut.cz/student/studijni/formulare).					
The completed and signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the topic of the work that the student					
has reserved is formulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the a	ssignment so that	the assignment			
can be supplemented and approved at the end of the semester.					
BI-DBS.21 Database Systems	Z,ZK	5			
Students are introduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lea	rn to design smal	databases			
(including integrity constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with t	the SQL language	, as well as with			
its theoretical foundation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the fun	ndamental concep	ots of transaction			
processing, controlling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduce	ed to special ways	of storing data			
in relational databases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of data	tabase systems,	debugging and			
optimizing database applications, distributed database systems, data stores.					
BI-DML.21 Discrete Mathematics and Logic	Z,ZK	5			
Students will get acquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts	from set theory w	ill be explained.			
Special attention is paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The co	ourse also lays do	wn the basics of			
combinatorics and number theory, with emphasis on modular arithmetics.					
BI-KAB.21 Cryptography and Security	Z,ZK	5			
Students will understand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	o use cryptograph	ic keys and			
certificates in systems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in a	pplications. Withir	labs, students			
will gain practical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedures	s of cryptanalysis.				
BI-LA1.21 Linear Algebra 1	Z,ZK	5			
We will introduce students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the fie	ld of real and con	plex numbers			
and also over finite fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elin	mination method (	GEM) and show			
the connection with linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eiger	nvalues and eigen	vectors of a			
matrix. We will also demonstrate some applications of these concepts in computer science.					

BI-MA1.21 Mathematical Analysis 1	Z,ZK	5
We begin the course by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numb	ers. Then we study	real sequences
and real functions of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of fu	unctions. This theor	retical foundation
is then applied to root-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation	and solution of sir	nple optimization
problems (i.e., the issue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical des	cription of complex	kity of algorithms.
BI-MA2.21 Mathematical Analysis 2	Z,ZK	6
The course completes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will	1 .	-
use the substitution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem	-	
functions with a prescribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithm	-	
theorem. Finally, we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and		-
analytical method of localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the i		-
BI-OSY.21 Operating Systems	Z,ZK	5
In this course that is a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and threa	,	-
critical regions, thread scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS i	-	
and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS Windows.	nonitoring. They a	Te able to design
	774	5
BI-PSI.21 Computer Networks	Z,ZK	-
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in lo		
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced ne	-	s. Students
practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux and Cisco IO		
BI-PST.21 Probability and Statistics	Z,ZK	5
Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variable	-	
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction	-	
estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statis	ical hypotheses ar	nd determining
the statistical dependence of two or more random variables.	1	1
BI-PA1.21   Programming and Algorithmics 1	Z,ZK	7
Students gain the ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple,		
statements, functions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for sea	rching, sorting, and	d manipulating
with linked lists and trees.		
BI-PA2.21 Programming and Algorithmics 2	Z,ZK	7
Students know the instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack		-
table). They learn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming	(e.g., template pro	ogramming,
copying/moving of objects, operator overloading, inheritance, polymorphism).		
BI-SAP.21 Computer Structure and Architecture	Z,ZK	5
Students will get acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of a	-	
memory, I/O communication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple p	ocessor is practica	ally implemented
in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.		
BI-TZP.21 Technological Fundamentals of Computers	Z,ZK	5
Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how compu	ter structures look	like at the lowest
level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to		•
limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a	computer power s	supply looks like
(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.		
BI-GIT.21 SW Development Technologies	Z	3
This course is aimed at one of the rudimental team software development technology - version control. To be more specific, we will introduce stude	nts to Git, the infor	mation manager
from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use.		
BI-TDP.21 Documentation and Presentation	KZ	3
The course is focused on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typical	Illy final university	theses. Students
learn to create text of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically process and provide the system of the	resent it in front of	classmates and
the teacher. The course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first	14 days of teachin	g. Within the
exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.		
BI-UOS.21 Unix-like Operating Systems	KZ	5
Unix-like operating systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovativ	e functions of mult	iuser operating
systems for computers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic pro	perties of this OS f	amily, such as
processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the le	vel of advanced us	sers who are not
only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting interface	e, called shell.

Security, version 2021		
BI-ADU.21 Unix Administration	Z,ZK	5
Students will learn the internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. The security principles of the UNIX operating system, with the administration of its basic subsystems and with the security principles.	ney will understan	d the differences
between user and administrator roles. They will get theoretical and practical knowledge of user management and administration, of users access righ	its, file systems, c	disk subsystems,
processes, memory, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the k	nowledge from th	e lectures on
specific examples from practice.		
BI-ASB.21 Applied Network Security	Z,ZK	5
The aim of the course is to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge ga	ined in course BI-	-PSI with actual
security applications like the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After finishir	ng the course stud	dent will get
knowledge of security applications in computer networks.		
BI-APS.21 Architectures of Computer Systems	Z,ZK	5
Students will learn the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Specific architecture of computers with universal processors at the level of machine instructions.	ecial emphasis is	given on the
pipelined instruction processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the p	rinciples of instru	ction processing
not only in scalar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	of the sequential r	model of the
program. The course further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory or	pherence and cor	nsistency in such
systems.		
BI-BEK.21 Secure Code	Z,ZK	5
The students will learn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After gettin	g familiar with the	threat modeling
theory, students gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every	program needs t	to run with
administrator privileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securin	g data and the re	lationships of
security and database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the of	defense against tl	nem.
BI-EHA.21 Ethical Hacking	Z,ZK	5
The goal of the course is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vul	nerabilities, and t	heir possible
exploitation in computer networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus	is on hands-on e	xperience with
vulnerabilities testing and the following process of penetration test documentation.		
BI-HWB.21 Hardware Security	Z,ZK	5
The course deals with hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with the op	perating principles	of cryptographic
modules, security features of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of HW	resources, includ	ling side-channel
attacks and tampering with hardware during manufacture. Students will have an overview of contact and contactless smart card technology including	applications and	related topics
for multi-factor authentication (biometrics). Students will understand methods of efficient implementations of ciphers.		
BI-UKB.21 Introduction to Cybersecurity	Z,ZK	5
The goal of the course is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic o	verview of threats	s in cyberspace
and attacker techniques, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace regulations.		
BI-ZSB.21 Basics of System Security	Z,ZK	5
The goal of the course is to provide introduction to basic concepts in security of computer systems. Further, the course introduces the basics of foreit		•
such as malware analysis or incident response. After finishing the course student will get both theoretical and practical knowledge in the area of mod	lern operating sys	stems security,
as well as skills needed for independent work in the area of operating system security incident analysis.

## Characteristics of the courses of this group of Study Plan: Code=BI-IB-PV.21 Name=Compulsory elective courses of the specialization Information Security, version 2021

BI-TAB.21	Applications of Security in Technology	Z,ZK	5			
The goal of the course	e is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Stu	idents get a broad	ler overview of			
cybersecurity applications and extend their knowledge from the cryptology, the secure code, and system, network, and hardware security.						
BI-VES.21	Embedded Systems	Z,ZK	5			
Students learn to desi	gn embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and emb	edded processors	s, their integrated			
peripheral circuits, pro	gramming methods, and applications. They get practical skills with development kits and tools.					
BI-ZUM.21	Artificial Intelligence Fundamentals	Z,ZK	5			
Basic course on intro	luction to artificial intelligence with emphasis on symbolic techniques. The design of an intelligent agent and the techniques ne	eded to create it w	vill be discussed,			
especially at the decis	ion-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but als	o by a non-physic	al entity, such			
as a virtual assistant of	or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art during the of-	course

# Characteristics of the courses of this group of Study Plan: Code=BI-V.2021 Name=Purely Elective Courses of Bachelor Programme Informatics, version from 2021/22 till 2024/25

TVK1	Physical Education	Z	1
TVV	Physical education	Z	0
TV1	Physical Education	Z	0
TVV0	Physical education	Z	0
TV2	Physical Education	Z	0
TVKLV	Physical Education Course	Z	0
TVKZV	Physical Education Course	Z	0
BI-ADW.1	Windows Administration	Z,ZK	4
This course is presente	d in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-ALO	Algebra and Logic	Z,ZK	4
The course extends an	d deepens the study of topics touched upon in the basic course in logic.		
BI-AVI.21	Algorithms visually	Z,ZK	4
The course complement	ts other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the compute	r science that exte	end substantially
knowledge presented in	BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.o	rg <http: td="" www.al<=""><td>govision.org&gt;)</td></http:>	govision.org>)
that make understandir	ng the principles of algorithms easy.		
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the cour	se corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieveme	ent - students are	due to: -Take an
active part in the langua	age instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both	the midterm and	the final term
tests with the success r	ate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by	individual teacher	rs during the first
class of the term.			
BI-APJ	Aplication Programming in Java	Z,ZK	4
This course is presente	d in Czech, Advanced technologies in Java		1

		,
NI-AFP Applied Functional Programming	KZ	5
This course is presented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional programming paradigms.		
the rise nowadays and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, r	nastering this paradie	gm becomes a
necessary competence of a software engineer: the theory and especially the practice.		
BIE-ZUM Artificial Intelligence Fundamentals	Z,ZK	4
Students are introduced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the		
space search, multi-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary alg	gorithms and the neu	iral networks, will
be presented as well.	7 71/	
BI-BLE Blender	Z,ZK	4
The course extends knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for the animation. It offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming gramming gr		• •
		4
NI-DSP Database Systems in Practes This course is presented in Czech.	Z,ZK	4
	7.71/	4
BI-STO   Storage and Filesystems The student will learn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, ar		1 -
load balancing and high availability.	ia archiving, as so as	s storage scaling,
NI-PSD Public Services Design	KZ	4
The course will introduce students to specifics of UX, Service design and development for public sector. We will look into the design and develop	1	
suppliers (devs and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaborations and students will work on projects from partner organizations and will try out collaborations and students will be according to the students will be accordi		
Course is aimed at students-designers as well as clients.		
BIE-DIF Differential equations	Z,ZK	5
This course provides a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to esse	1 .	-
of variables. Key theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are cover		-
polynomial analysis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world appli	cations. Finally, an in	troduction to
partial differential equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving	ODEs and PDEs, inc	luding implicit
and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		
NI-DZO Digital Image Processing	Z,ZK	4
This course presents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practice	cal algorithms that ar	e both easy to
implement and have an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background the	nat is also valuable ou	Itside the domain
of digital image processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, h	HDR compression, de	e-blurring in
frequency domain, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gr	ay conversion, contex	xt enhancement,
interactive as-rigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting	g, adding depth, alph	a matting.
NI-DDM Distributed Data Mining	KZ	4
Course focuses on state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain h	ands on experience	with large scale
data processing framework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementa	tions and will be cap	able to propose
approaches to parallelize other algorithms. The course is prezented in czech language.		1
BI-EP1.24 Effective programming 1	KZ	4
The course is taught in Czech.		1
BI-EP2   Efficient Programming 2	KZ	4
Continuation of Efficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving	individual problems	are discussed,
with the aim to choose the best one and avoid implementation errors.		
BI-ANGK English language, contact preparation for the B2 level exam	Z	2
The content of the course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieve		
active part in the language instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in b tests with the success rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified		
class of the term.	by individual teache	is during the list
	7 71/	4
BI-EJA Enterprise Java	Z,ZK	4
The course is on advanced technologies in the Java programming language. The focus is on technologies for development of enterprise informat a database and are accessed through the web interface.	lon systems which a	re connected to
	Z,ZK	4
BI-EJK Enterprise Java and Kotlin The course is on advanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise in		4
architecture, that can be deployed to the cloud.	normation systems v	with microservice
	Z,ZK	5
BI-FMU Financial and Management Accounting The aim of the course is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in	· · ·	-
operations in accounts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal moc		
of economic operations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of ma		
Business Inteligence moduls in Business information systems.	nagomont accounting	g alo babb bi
BI-HAM HW accelerated network traffic monitoring	KZ	4
This course introduces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitorir		1
network traffic are mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike		-
for analysis). The goals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring netwo		
level and to develop their practical abilities in this field.		
BI-HMI History of Mathematics and Informatics	Z,ZK	3
This course is presented in Czech.	, _, <u>_</u> , ,	-
BI-ARD Interactive applications on Arduino	KZ	4
The subject is designed for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple a		1
kits and control varied peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embed		
not only on display of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and there		
Software Engineering students.		

NI-IAM	Internet and Multimedia	Z,ZK	4
	ocused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes a		•
	hals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practice with a look at practice with a students will practicelly assemble AV transmission shoins using HW and SW tashaalagiaa and varify the		
	ons. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recordin		-
for audience.		g ine econe up te	
BIE-CSI	Introduction to Computer Science	Z	2
This is an introductory	class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in oth	er fields but intere	sted in computer
-	tudents, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The	-	
	ples of computer science for students to understand, early on, what computer science is, why things such as high-level progra , and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer		
	stions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are int		•
than expected, or ever		si con pa	
FITE-EHD	Introduction to European Economic History	Z,ZK	3
The course introduces	a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global	economy through	the description
	story. As European countries have been dominant actors in this process it focuses predominantly on their roles in the econom		-
-	to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial ins	-	
	d economic history of particular European countries but rather the impact of trade and role of particular events, institutions an f a mixture of lecture and discussion.	a organizations in	nistory. Class
BIE-IMA2	Introduction to Mathematics 2	Z	2
	extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they a	1	
examples.		,	·
BI-CS2	C# language and data access	KZ	4
The C# language and	data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Mic	rosoft platform. T	he students will
, , , , , , , , , , , , , , , , , , ,	ed to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current te	•	
	g and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQ		
	other objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data e course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Mo		-
(XML description).		Juci, Otorage Mot	
BI-CS3	Language C# - design of web applications	KZ	4
	roduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overvi	ew of the develop	ment possibilities
on thisplatform. They v	vill learn to create WebAPI and to use it by client programs.		
BI-SQL.1	Language SQL, advanced	KZ	4
	owledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. I	-	
	ries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point of view query optimization. Execution plan , clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan		
	ures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Or-	-	-
PostgreSQL.			,
BI-QAP	Quantum algorithms and programming	KZ	5
	students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanic	-	-
	http://www.instations.org/antum.computing.During tutorials students work in open-source software devel	•	
	(nowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VI e. No previous knowledge of physics is assumed.	VIVI and experience	ce with Python
	Statistical Modelling Lab	KZ	5
	I on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is		1
	nd its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms,	-	
At this point, the subje	ct is on the border of own research and may result in the topic of final work (diploma or bachelor thesis).		
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
	ents interested not only in technical scope of computer science, but also in making products usable - for users and for develop	pers. Students of t	his course can
	edge to design, plan and analyse their own projects in the context of human-centered security.	71/	
NI-MPL	Managerial Psychology	ZK	2
NI-MSI Mathematical semantic	Athematical Structures in Computer Science A of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Sco	Z,ZK	4 a calculus
Introduction to categor			a calculus.
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5
	on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Univ	1 '	-
includes both PC side	and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of	JSB devices, Linu	ux and Windows
	tion development, and APIs of selected devices.		
BI-MIT	Mikrotik technologies	KZ	3
	f the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are	-	-
	providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the e and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary compute		
	e data-link, network and transport layer of the OSI model.		pto like protocolo
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
	mming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, wh	1	atural abstraction
is used to build comple	x modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the	skills of design and	d implementation
	odern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their developmen		
	object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to we of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involu-	-	
BI-MVT.21	of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct invol Modern Visualisation Technologies	Z,ZK	5
	is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and at		-
-	s (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the meni		
	zation, scientific data visualization, and 3D model scanning.	5

BI-ST1 Network Technology 1	Z	3
The subject is oriented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acred		-
CCNA1 - R&S Introduction to Networks.		
BI-ST2 Network Technology 2	Z	3
This course is presented in Czech.	-	Ŭ
BI-ST3 Network Technology 3	Z	3
Students will further enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented du		
get further extended in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, pr	-	
simple topology, security, etc.	culture and a second	
	7	2
BI-ST4 Network Technology 4	Z	3
Students will further enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switch		-
BI-ST2 courses got further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased e		
beyond a simple topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a complet	, ,,	
Broadcast Multiple Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and sw	-	-
recoveries, and emergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the miti	gation ways while	maintaining the
network running.		4
BI-SKJ.21 Scripting Languages	Z,ZK	4
Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In a	ddition, they gain a	deeper insight
into shell and some other particular scripting languages and will get practical experience with shell script programming.		
BI-SOJ Machine Oriented Languages	Z,ZK	4
Students of the course will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optim		
and efficient cooperation of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of vi	ew linked to higher	level languages.
This knowledge will be used during reverse engineering, optimization, and evaluation of code security.		
FIT-SEP World Economy and Business	Z,ZK	4
This course is presented in Czech. The course introduces students of technical university to the international business. It does that predominantly to	y comparing indivi	dual countries
and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as w	ell as indexes of ec	onomic freedom,
corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form	of discussions bas	sed on individual
readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
BI-SEP World Economy and Business	Z,ZK	4
This course is presented in Czech. The course introduces students of technical university to the international business. It does that predominantly to	1	
and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as w		
corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form		
readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
NI-SYP Parsing and Compilers	Z,ZK	5
The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge	1 1	-
of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		and applications
	47	2
BI-GIT Version control system GIT	KZ	_
Students will be introduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and p		articular system
even the implementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git serve		
BIE-SEG Systems Engineering	Z	0
This is an introductory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principle		
to understand processor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After ta		
understand the difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what c	oncurrency is, as c	pposed to
parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.		
TV2K1 Physical Education 2	Z	1
BI-TS1 Theoretical Seminar I	Z	4
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a cl	assical reading gro	up. The students
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course	is a work with scie	ntific papers and
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.		
BI-TS2 Theoretical Seminar II	Z	4
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a cl	1	up. The students
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course		•
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.		
BI-TS3 Theoretical Seminar III	Z	4
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a cl		
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course		•
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.		
	7	4
BI-TS4   Theoretical Seminar IV	Z	4
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a cl		-
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course	is a work with scie	nunc papers and
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.		
BI-TDA   Test driven architecture	KZ	4
The course is focused on practical examples of how to develop, test, and deploy software with tools like GitLab, Docker, Kubernetes, and more that		-
world. This course has a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occur	in the semester p	roject.
NI-TSP Testing and Reliability	Z,ZK	5
Students will gain knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to	prepare a test set	with the help of
the intuitive path sensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems wi	h built-in-self-test	equipment. They
will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
BI-QUA Quality Assurance	KZ	4
This course introduces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the conte	1	of software
development and will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student sh		
analysis, design a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs four		-

FI-TOP Academic writing	Z	2
Publishing is an important and required part of research activity. It is not only about obtaining research results but also about applying them in the fol	rm of publication.	Writing scientific
publications can be useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the o	,	
write a scientific article, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting		0
else's article. The course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester.	Dates will be det	ermined based
on the availability of enrolled students.	7 71/	r -
BI-CCN Compiler Construction bachelor students in computer science. The goal of the class is to introduce basic principles	Z,ZK	5
understand the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching theme	-	Students to
BI-TEX TeX and Typography	Z,ZK	4
This course is presented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of t		1
rules.		<i>y</i> 1 0 1
BI-EHD Introduction to European Economic History	Z,ZK	3
This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-KSA Cultural and Social Anthropology	ZK	2
The one-semester course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the dive		
anthropological research from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, he	alth, history, dea	th, etc) will be
shown. The course is presented in Czech.		
BI-ULI Introduction to Linux	Z	2
Students become familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and becom and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (terminal).	e lamiliar with ba	sic commands
BI-OPT Introduction to Optical Networks	Z,ZK	4
Students get basic overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on p		1
of optical network technology and on their solutions. The course will include the history of optical communications, an overview of passive componer		
dispersion compensators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission sy		
the most up-to-date topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such	as the accurate	time on Internet,
ultrastable frequency transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters	<ol> <li>Students will so</li> </ol>	olve real tasks
from practice.		
NI-VCC Virtualization and Cloud Computing	Z,ZK	5
Students will gain knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	-	
acquainted with virtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to effi		•
performance parameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect management of complex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills		-
and development tools (Continuous integration and development).		ouornintogration
BI-VHS Virtual game worlds	ZK	4
The course leads students to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current s	1	ge is furthermore
complemented by the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world.	. The course can	be followed by
the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR devices.		
BI-VR1   Virtual reality I	KZ	4
Introduction to Virtual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements		
The course focuses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves co	omputational thin	king, empathy
and shared social activities. BI-VR2 Virtual reality II	KZ	3
BI-VR2   Virtual reality II Continuation of the course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The c	1	-
for computer science and gamification in various social metaverse and desktop engines.		
BI-VAK.21 Selected Applications of Combinatorics	Z	3
The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the	1	-
issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some ba		
with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical)	informatics. Areas	s from which we
will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optim	ization and more	. Students will
also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.		
BI-VMM Selected Mathematical Methods	Z,ZK	4
The lecture begins with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then a		
properties. Further, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the	wavelet transform	m. We examine
the linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting examples.	7 71/	4
NI-VYC Computability Classical theory of recursive functions and effective computability.	Z,ZK	4
BI-ZS10 Bachelor internship abroad for 10 credits	Z	10
Each student can once within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or	1	-
internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content.		
internship. Auxiliary courses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits	correspond to 4 v	veeks of full-time
employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided	into two subjects	s if the internship
exceeds the academic year's dead-line.		
BI-ZS20 Bachelor internship abroad for 20 credits	Z	20
Each student can once within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or		
internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content. The student must provide evidence of the professional content. The student must provide evidence of the professional content.		
internship. Auxiliary courses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits a student can earn for one internship is 30 credits. This amount can be divided	-	
employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided exceeds the academic year's dead-line.		

BI-ZS30	Bachelor internship abroad for 30 credits	Z	30
Each student can once	within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or	research institutio	n. Before the
internship the Dean of th	ne FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content.	sional content and	d extent of the
internship. Auxiliary cour	rses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits	correspond to 4 v	veeks of full-time
employment with a foreig	gn institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided	d into two subjects	s if the internship
exceeds the academic y	ear's dead-line.		
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4
Intelligent embedded sy	stem fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim	of the course is to	teach students
modern humanoid robot	control and development of applications in a graphical development environment. Lectures provide fundamentals of motion c	ontrol, sensor rea	ding, application
interfaces, robot navigat	ion and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to g	et practical experi	ence with these
technologies.			
BI-ZPI	Process engineering	KZ	4
Students will learn funda	amentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles	of process model	ling and they will
learn basics of the used	notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of I	ousiness process	es using modern
CASE tools. The role of	process engineering for information systems development is discussed as well as its importance in the overall context of info	ormation and busi	ness strategy of
an enterprise.			
BI-ZNF	PHP Framework Nette - basics	KZ	3
Students will gain the ba	sics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech	n popular framewo	ork. The resulting
knowledge should serve	for the efficient creation of a web backend in PHP language.		
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
This course is presented	d in Czech.		
BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4
This course is presented	d in Czech.	- 	
BI-3DT.1	3D Printing	KZ	4

## Characteristics of the courses of this group of Study Plan: Code=BI-IB-VO.21 Name=Elective vocational Courses originating from neighboring spec. for bachelor spec.BI-IB.21, ver. 2021

neighborning spec. for bachelor spec.bi-ib.z1, vel. 2021		
BI-VES.21 Embedded Systems	Z,ZK	5
Students learn to design embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and emi		their integrated
peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.		, alon intogratou
BI-ZUM.21 Artificial Intelligence Fundamentals	Z,ZK	5
Basic course on introduction to artificial intelligence with emphasis on symbolic techniques. The design of an intelligent agent and the techniques ne	eded to create it w	ill be discussed,
especially at the decision-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but als	so by a non-physic	al entity such
as a virtual assistant or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art during the		a only, ouon
		_
BI-MPP.21 Methods of interfacing peripheral devices	Z,ZK	5
The course is focused on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Univ	versal serial bus (U	ISB). The course
includes both PC side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of	USB devices. Linu	x and Windows
drivers, simple application development, and APIs of selected devices.		
BI-MVT.21 Modern Visualisation Technologies	Z,ZK	5
The goal of the course is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and a	ugmented reality, v	visualization on
high resolution displays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the men	tioned technologie	s namely fractal
	doned teenhologie	S, namely naotai
and procedural visualization, scientific data visualization, and 3D model scanning.		
BI-AWD.21 Web and Database Server Administration	Z,ZK	5
Students will get acquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test,		ex database and
web service systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an example of		
	i a web server.	
BI-AG2.21 Algorithms and Graphs 2	Z,ZK	5
This course, presented in Czech, introduces basic algorithms and concepts of graph theory as a follow=up on the introduction given in the compuls	orv course BI-AG1	.21. It further
delves into advances data structures and amortized complexity analysis. It also includes a very light introduction to approximation algorithms. For E	-	
BIE-AG2.21.		
BI-BIG.21 DB Technologies for Big Data	KZ	5
Students will be introduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course	1	-
		-
finishing the course students were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible		
collection, transformation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theo	retical foundation a	and presentation
of individual technologies will be supplemented with specific examples from practice.		
	7 71/	5
BI-EPP.21 Economic Business Processes	Z,ZK	-
The aim of the course is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic	and financial aspe	ects of business
in the market environment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of	the company's life	cycle, from the
establishment of the company, through the management of property and capital structure, financing of the company, determining the cost function of	of the company and	d labor costs to
	of the company and	
evaluating the financial health of the company and its eventual rehabilitation or termination.	1

The organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, incl correction for parallel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of co the environment and the architecture of the bus system. The problems will be practically evalu	ess analysis, dete management acco e of business activi and to use value in Intelligence module Z,ZK overview of sensor hitectures for differe- ents (hardware - AF Z,ZK ail with the internal propriate codes for uding codes for erro mmunication of th roprogrammed pro	rmining its value punting as a tool ities over several formation to es in business 5 rs and actuators, ent application RM, ESP, STM; 5 structure and r implementation ror detection and e processor with cessor simulator 5
The aim of the course is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for busines and other indicators for comparison with other companies and management decision process at the tactical and strategic level. The second view is for financial management and prediction of business development. Management accounting allows monitoring of the financial status and performance accounting periods, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital a assess options related to future business decisions. The principles of management accounting, described in this course, are the basis of Business information systems, decision support systems, and other knowledge-oriented systems.         BI-IOT.21       Internet of Things         The course focuses on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an wireless communication technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT arch areas. Within the computer labs, students will gain practical experience with developing simple IoT systems using common development environment software - Arduino, Raspberry Pi OS).         BI-JPO.21       Computer Units         Students deepen their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in detail, incl correction for parallel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of correction for parallel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of correction for parallel and serial d	ess analysis, determanagement accore of business activiand to use value in Intelligence module Z,ZK overview of sensor intectures for differents (hardware - AF Z,ZK ail with the internal propriate codes for errommunication of throprogrammed pro	rmining its value punting as a tool ities over several formation to es in business 5 rs and actuators, ent application RM, ESP, STM; 5 structure and r implementation ror detection and e processor with cessor simulator 5 in, the ability to

The aim of the course is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for busins and ther indicators for comparison with other companies and management decision process at the tactical and strategic level. The second view is for financial management and prediction of business development. Management accounting allows monitoring of the financial status and performance accounting periods, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital a assess options related to future business decisions. The principles of management accounting, described in this course, are the basis of Business information systems, ad-other knowledge-oriented systems. BI-IOT.21 Internet of Things The course focuses on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an wireless communication technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT arct areas. Within the computer values, students will gain practical experience with developing simple IoT systems using common development environmet software - Arduino, Raspberry Pi OS). BI-JPO.21 Computer Units Students deepen their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in deta organization of computer units and processors and their internations with the environment, including accelerating arithmetic-logic units and using ap of multiplication. The organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, incl correction for parallel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of cot the environment and the acritecture of the bus system. The problems will be practically evaluated in the labs and with	ess analysis, dete management acco e of business activi and to use value in Intelligence module Z,ZK overview of sensor hitectures for differe- ents (hardware - AF Z,ZK ail with the internal propriate codes for uding codes for erro ommunication of th roprogrammed pro Z,ZK y terms in a domai structural modeling esentation in the Internal MO method and the prostor v abstraktr grafikou. BI-MDF.21 Modern Data Formats	KZ	3
The goal of the course is to give an overview of commonly used data formats for typical types of data. There will be a description of each data type a	I I	its used for that
data type along with tools available to work with such data. After finishing the course, the students should know how to work with common data, e.g.	on the Web.	
FIT-ITI Modern IT infrastructure	Z,ZK	5
BI-MGA.21 Multimedia and Graphics Applications	Z,ZK	5
Students get acquainted with multimedia technologies and applications for 2D/3D bitmap and vector graphics. During the course, current tools for we	orking with images	s, videos, 3D
graphics and animation will be introduced. Students learn several basic techniques of creation and editing content in computer graphics, introduction to	graphic formats, a	nd compression
technologies. They learn to use multimedia transmission and representation systems, including real-time multimedia processing. They understand the	e principle of ope	ration and use
of graphics processing cards. They gain a number of practical skills, such as vectorizing raster images, retouching photos, or creating 3D models.		
BI-OOP.21 Object-Oriented Programming	Z,ZK	5
Object-oriented programming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate togeth		-
course students get acquainted with the main principles of object-oriented programming and design, used in modern programming languages. The en	mphasis is on prac	tical techniques
for developing software, which includes testing, error handing, refactoring, and application of design pattern.	7 71/	<b></b>
BI-PGR.21 Computer graphics programming After attending this curse, students can program a simple interactive 3D graphical application like a computer game or scientific visualization, design	Z,ZK	5
geometric details and materials (like wall surface, wood, sky), and set up the lighting. At the same time, they understand the fundamental principles and		-
such as graphical pipeline, geometric transformations, or lighting model. They gain knowledge allowing orientation in computer graphics and represe		
professional development, e.g., GPU programming and animations. They get used to techniques utilized in geometric modeling, modeling curves and su	-	-
BI-PRS.21 Practical Statistics	KZ	5
The students will be introduced to methods of applied statistics. They will learn how to work with various types of data, perform analyses, and choose	models fitting the d	lata. The course
will encompass regression and correlation analysis, analysis of variance and non-parametric methods. Students will learn to use the statistical softw	are R and will app	ly the studied
methods on data from real problems.		
BI-PNO.21 Practical Digital Design	KZ	5
Students get an overview of the contemporary digital design flow and learn practical skills to use synchronous design techniques. They understand the		
and implementation technologies FPGA and ASIC. Students demonstrate practical use of the design techniques in the course project using modern	industry-standard	CAD design
tools.		
BI-PAI.21 Law and Informatics	ZK	5
The aim of the course is to introduce students into the basic legal instruments that they will encounter in their practice. Students will gain knowledge	-	
Republic and will be alerted to the pitfalls that await them in business from the point of view of law. They will understand the process of concluding or environment, will know their responsibilities in working with the Internet, will be familiar with the institutes of intellectual property law, and will be able		
and open-source licenses. Emphasis will also be put on the legal protection of data on the Internet, the registration of Internet domains and protection		
will also be alerted to such behaviour in the field of IT that can be classified as criminal under the Czech law. The course will also include analyses of	-	
BI-PJP.21 Programming Languages and Compilers	Z,ZK	5
Students learn basic compiling methods of programming languages. They are introduced to intermediate representations used in current compilers	· · ·	-
create a specification of a translation of a text that conforms a given syntax, to a target code and also to create a compiler based on the specification	n. The compiler ca	n translate not
only a programming language but any text in a language generated by a given LL input grammar.		
BI-PPA.21 Programming Paradigms	Z,ZK	5
The course deals with basic paradigms of high-level programming languages, including their basic execution models, benefits, and disadvantages of		
programming paradigm and its basic principles are explained in details. Logic programming is introduced as another way of declarative programming		
on lambda calculus and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern mair	istream programm	ing languages
such as C++ and Java.	Z.ZK	<i></i>
BI-PGA.21 Programming of Graphic Applications The course will present the possibilities of current professional open-source tools for image editing, video editing, 3D animation (GIMP, Blender) and the	, , ,	5
data (3D scenes, mathematical data). Emphasis will be placed on the possibilities of further enhancement of the presented software tools, both usin		·
by implementation of plugins.	g bailt in company	
BI-PJS.21 JavaScript Programming	KZ	5
The course is an introduction to Javascript programming. Students will also learn best practices and get acquai nted with tools that make code devel	I I	
BI-PYT.21 Python Programming	KZ	5
The aim of the course is to get acquainted with basic efficient control and data structures of the Python programming language for text and binary data	ata processing. Th	e differences
between philosophy of programming in Python and in other programming languages will be explained. Each topic is prepared for students in the form	nat of a Jupyter no	otebook, which
enables greater accent to individual student work. Before each lab, students pass a short test on the last week topic. Four homeworks plus a semes	ter work will be as	signed during
the semester.		
BI-PRR.21 Project management	Z,ZK	5
The aim of the course is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamwork, ar	-	-
project, communication, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis, risk Gantt charts, resource schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especially for		•
deepening their knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management positions in l		
	argo companioo.	
also sullable lot all hose who will develop sollwate of natowate in the jorn of learn projects		
also suitable for all those who will develop software or hardware in the form of team projects. BI-SIP21 Network Programming	7	5

BI-SP2.21 Team Software Project 2	KZ	5
Students gain hands-on experience with the iterative development process while working on a large-scale software project. The first iteration is the re-	1 1	1 course project.
However, in this follow-up, the functionality, testing, and documentation of the software system being developed will be emphasized. Students will w		
teacher, in the role of the team and project leader, regularly consults with the team (at the seminars) the formal as well as material aspects of their	solution.	
BI-SPS.21 Administration of Computer Networks and Services	Z,ZK	5
The aim of the course is to deepen the theoretical knowledge of network technologies and protocols in the environment of network servers administ		
Linux and Windows. The course syllabus requires the knowledge at the level of courses BIE-PSI, BIE-VPS, and BIE-OSY. Practical skills will be gaine		
with real network infrastructure.		
BI-ML1.21 Machine Learning 1	Z,ZK	5
The goal of this course is to introduce students to the basic methods of machine learning. They get theoretical understanding and practical working	· · ·	-
classification models in the supervised learning scenario and clustering models in the unsupervised scenario. Students will be aware of the relation	• •	
variance, and know the fundamentals of assessing model quality. Moreover, they learn the basic techniques of data preprocessing and multidimens	-	
demonstrations, pandas and scikit libraries in Python will be used.		a practical
BI-ML2.21 Machine Learning 2	Z,ZK	5
The goal of this course is to introduce students to the selected advanced methods of machine learning. In the supervised learning scenario, they, in	· · ·	-
and neural networks. In the unsupervised learning scenario students learn the principal component analysis and other dimensionality reduction me	-	
basic principles of reinforcement learning and natural language processing.		daonio got ino
BI-SVZ.21 Machine vision and image processing	Z,ZK	5
Camera systems are becoming a common part of life by being universally available. Related to this phenomenon is the need to process and evalua	1 ' 1	-
introduces students to different types of camera systems and a variety of methods for image and video processing. The course is focused on practical	-	
problems of practice that the graduates may encounter.	ruse of carriera sys	sterns for solving
	774	5
BI-SRC.21   Real-time systems	Z,ZK	-
Students obtain the basic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issu		-
lectures will be experimentally verified in computer labs. The course is mainly focused on embedded RT systems, therefore the design kits in the lab	die life saille as	III IIIE DIE-VES
Course.	7 71/	
BI-TJV.21 Java Technology	Z,ZK	5
The goal is to provide knowledge and skills for developing information systems and applications through concepts used in software development and	experience with lit	oraries and tools
from Java language ecosystem. At the course end, the students are able to develop software systems in Java platform.		
BI-TPS.21 Computer Networks Technologies	Z,ZK	5
The course introduces students with basic and advanced technologies, components, and interfaces of contemporary computer networks at the phy		-
link layer. The lectures provide theoretical foundations of these technologies and explain relevant physical principles. In the labs, the respective tech	-	
with the most important ones students will get hands-on experience. Thematically, the course covers both local and long-range optical networks, Et	hernet, modern wir	eless networks,
always with focus on high-speed networks.		
BI-TIS.21 Information Systems	Z,ZK	5
The goal of this course is to familiarise students with the information systems topic and information systems implementation principles. During the c		
"on the market" existing types of systems and their usage in specific industry segments. Students are familiarised with the CRM, ERP, MRP and oth		-
The fundamental part of the course is the introduction to key ideas of an information system selection, evaluation of information system benefits, wa	-	-
implementation and information system implementation based on the project management principles. The emphasis is on the initial customer analy		
decide whether it is better to implement any existing information system or to develop a new one from scratch. These factors determine the informatic		
At the end of the course information systems security, operation, support, maintenance, legislation impacts, and government information systems to		
BI-TUR.21 User Interface Design	Z,ZK	5
Students gain a basic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where sof		
communicate with the user optimally, since the needs and characteristics of users are not taken into account during product development. Students	gain an overview	of methods that
bring users into the development process to ensure optimal interface for them.	· 1	
BI-TWA.21   Design of Web Applications	Z,ZK	5
The basic course of web application development. Initially, the students become familiar with HTTP and its possibilities and partly with some proper		-
structure (HTML) and presentation of document on the Web (CSS). These skills provide the necessary basis for the development of Web application		
modern libraries facilitate the development of Web pages applications. Server side will be demonstrated on PHP technology using frameworks Sym	fony 2, Doctrine 2.	Developments
on the client side will be demonstrated using a JavaScript language with library jQuery and possibly MV* framework React.	,	
BI-IDO.21 Introduction to DevOps	Z,ZK	5

BI-FEM.21	Fundamentals of Economics	Z,ZK	5
The course allows the	students to discover basics of economic theory, which will then be used in subsequent courses of economics and manageme	nt. It contains a ge	eneral overview
of fundamental microe	conomic and macroeconomic topics.		
BI-ZRS.21	Basics of System Control	Z,ZK	5
The course gives an ir	troduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will for	us our attention p	particularly on
control of engineering	and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, descript	ion methods of sy	stem models,
basic linear dynamic s	ystems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of ci	eating a description	on of the system
model, the basic linear	dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also give	n to sensors and	actuators in
control loops, issues o	f stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industr	ial implementation	n of continuous
and digital controllers	and PLC control.		

### List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
active part in the lan	English language, preparation for the B2 level exam urse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement guage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both t rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind class of the term.	ne midterm and the	e final term
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduce and regular grammars	ed to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite s, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	automata, regular e hierarchy of forma	expression
BI-ACM	Programming Practices 1 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM2	Programming Practices 2 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM3	Programming Practices 3 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM4	Programming Practices 4 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
etween user and adr	Unix Administration internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. They ninistrator roles. They will get theoretical and practical knowledge of user management and administration, of users access rights, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the kn specific examples from practice.	file systems, disk s	subsystem
BI-ADW.1	Windows Administration This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	4
develops the knowled	Algorithms and Graphs 1 the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cu dge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the ms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asymptotic Algorithms and Graphs 2	time and space co	
This course, present	ted in Czech, introduces basic algorithms and concepts of graph theory as a follow=up on the introduction given in the compulsor s data structures and amortized complexity analysis. It also includes a very light introduction to approximation algorithms. For Eng BIE-AG2.21.	y course BI-AG1.2	1. It furthe
BI-ALO	Algebra and Logic The course extends and deepens the study of topics touched upon in the basic course in logic.	Z,ZK	4
BI-AND.21	Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-ANG	English Language, Internal Certificate Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AN	ZK IG	2
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-ANGK	English language, contact preparation for the B2 level exam	Z	2
active part in the lan	urse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement guage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both t rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind class of the term.	ne midterm and the	e final term
BI-APJ	Aplication Programming in Java This course is presented in Czech. Advanced technologies in Java.	Z,ZK	4
BI-APS.21	Architectures of Computer Systems he construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spe	Z,ZK	5

not only in scalar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of the sequential model of the

program. The course further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory coherence and consistency in such

programmine court	systems.		iney in each
BI-ARD	Interactive applications on Arduino	KZ	4
, ,	ned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple application of the students will be applied to the students of first grade of bachelor study as introduction to embedded systems.		•
	rried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded si ay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	•	
not only on disple	Software Engineering students.		web and
BI-ASB.21	Applied Network Security	Z,ZK	5
	irse is to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge gaine		
security applicat	ions like the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After finishing	g the course studer	nt will get
	knowledge of security applications in computer networks.		
BI-AVI.21	Algorithms visually	Z,ZK	4
	ments other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer sc ad in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&I		
kilowiedge preserik	that make understanding the principles of algorithms easy.	, mp.//www.aigovis	son.orgægt,)
BI-AWD.21	Web and Database Server Administration	Z,ZK	5
	equainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and the		
web serv	ice systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exam	ple of a web serve	er.
BI-BAP.21	Bachelor Thesis	Z	14
BI-BEK.21	Secure Code	Z,ZK	5
	arn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting fa		-
-	a gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every ileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing		
	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and th		-

	roduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is for	I I	
finishing the course	e students were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible me	thod of data proce	essing (data
collection, transform	nation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretical	al foundation and p	presentation
	of individual technologies will be supplemented with specific examples from practice.	774	
BI-BLE	Blender ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in	Z,ZK	4
	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	-	-
BI-BPR.21	Bachelor project	Z	1
	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	ہ partial tasks that he	e / she will
perform during the	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at the	he end of the seme	ester. 2. The
-	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut		-
	I signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top nulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assig		
	can be supplemented and approved at the end of the semester.	jiment so that the	assignment
BI-CCN	Compiler Construction	Z,ZK	5
	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	of compilers for st	udents to
	Ind the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		6.
BI-CS1	Programming in C#	KZ	4
	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		
	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class defi ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging		-
	well as work with files are emphasized.	and exception pro-	oooonig, ao
BI-CS2	C# language and data access	KZ	4
The C# language	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros	oft platform. The st	tudents will
· ,	is used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techn	0	
	rying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L) ). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u	-	
	f the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model		-
(	(XML description).	,g	
BI-CS3	Language C# - design of web applications	KZ	4
The students will be	introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of	of the development	possibilities
	on thisplatform. They will learn to create WebAPI and to use it by client programs.		
BI-DBS.21	Database Systems	Z,ZK	5
	oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They learn constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the	-	
	lation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda		
	lling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced t	-	
in relational databa	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of data	base systems, deb	ugging and
	optimizing database applications, distributed database systems, data stores.	<sup>1</sup>	
BI-DML.21	Discrete Mathematics and Logic	Z,ZK	5
-	equainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts from paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours	-	-
opoolar allemitor is	combinatorics and number theory, with emphasis on modular arithmetics.	o also lays utwill ll	10 003103 01
BI-EHA.21	Ethical Hacking	Z,ZK	5
	purse is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vulne	I ' I	-
exploitation in con	nputer networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus is	on hands-on exper	rience with
	vulnerabilities testing and the following process of penetration test documentation.		

BI-EHD	Introduction to European Economic History	Z,ZK	3
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		T
BI-EJA	Enterprise Java	Z,ZK	4
The course is on a	dvanced technologies in the Java programming language. The focus is on technologies for development of enterprise information sys	tems which are c	onnected to
	a database and are accessed through the web interface.	7 71/	4
BI-EJK	Enterprise Java and Kotlin dvanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise informati	Z,ZK	
	architecture, that can be deployed to the cloud.	on systems with	TICI USEI VICE
BI-EP1.24	Effective programming 1	KZ	4
	The course is taught in Czech.		-
BI-EP2	Efficient Programming 2	KZ	4
	ficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving individ		1 -
	with the aim to choose the best one and avoid implementation errors.		
BI-EPP.21	Economic Business Processes	Z,ZK	5
The aim of the cou	rse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and	financial aspects	of business
	onment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the		
establishment of th	e company, through the management of property and capital structure, financing of the company, determining the cost function of the	company and lat	bor costs, to
	evaluating the financial health of the company and its eventual rehabilitation or termination.		
BI-FBI.21	Financial Business Intelligence	Z,ZK	5
	se is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for business a s for comparison with other companies and management decision process at the tactical and strategic level. The second view is man		-
	ement and prediction of business development. Management accounting allows monitoring of the financial status and performance of b	-	-
-	ds, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital and		
	ated to future business decisions. The principles of management accounting, described in this course, are the basis of Business Intel		
	information systems, decision support systems, and other knowledge-oriented systems.		
BI-FEM.21	Fundamentals of Economics	Z,ZK	5
The course allows	the students to discover basics of economic theory, which will then be used in subsequent courses of economics and management.	t contains a gene	ral overview
	of fundamental microeconomic and macroeconomic topics.		
BI-FMU	Financial and Management Accounting	Z,ZK	5
	rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the par	-	
	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification		-
or economic oper	ations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manager Business Inteligence moduls in Business information systems.	nent accounting a	are base of
BI-GIT	Version control system GIT	KZ	2
-	roduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and practi		
	nplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git s		-
BI-GIT.21	SW Development Technologies	Z	3
	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to		
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		
BI-HAM	HW accelerated network traffic monitoring	KZ	4
	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The	-	-
	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s		
for analysis). The g	oals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traffi	c on a hardware a	and software
	level and to develop their practical abilities in this field.	7 71/	5
BI-HAS	Human Aspects in Cryptography and Security students interested not only in technical scope of computer science, but also in making products usable - for users and for developers	Z,ZK	
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.	. Olderns of this	
BI-HMI	History of Mathematics and Informatics	Z,ZK	3
Brrivii	This course is presented in Czech.	2,213	
BI-HWB.21	Hardware Security	Z,ZK	5
	ith hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with the opera		
modules, security fe	atures of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of HW res	ources, including :	side-channel
attacks and tampe	ring with hardware during manufacture. Students will have an overview of contact and contactless smart card technology including a	pplications and re	lated topics
	for multi-factor authentication (biometrics). Students will understand methods of efficient implementations of ciphers.		
BI-IDO.21	Introduction to DevOps	Z,ZK	5
	rith the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of syst		
	support software development, testing and compilation. It also focuses on tools for automating infrastructure management and buildi		
the Cloud. It is an	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquainte used in practice.	a with modern te	chnologies
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
DI-100	This course is presented in Czech.	T\Z	-
BI-IOT.21	Internet of Things	Z,ZK	5
	s on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an over	,	1
	cation technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT architec		
areas. Within the c	omputer labs, students will gain practical experience with developing simple IoT systems using common development environments	(hardware - ARM,	ESP, STM;
	software - Arduino, Raspberry Pi OS).		
BI-JPO.21	Computer Units	Z,ZK	5
	their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in detail w		
-	puter units and processors and their interactions with the environment, including accelerating arithmetic-logic units and using appropries organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, including	-	
	el and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of commu		
		oo pi	

cor cimulator wiro ntional m od pro

	and programmable hardware design kits (FPGA).		
BI-KAB.21	Cryptography and Security	Z,ZK	5
	lerstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to		
	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in app actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce		
BI-KOM.21	Conceptual Modelling	Z,ZK	5
	sed on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te		
	cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological structure is and foundation of OWU (DDE experimental data and a structure is a structure in the control of the structure is a structure in the control of the structure is a structure in the control of the structure is a structure in the control of the structure is a structure in the control of the structure is a structure in the control of the structure is a structure in the structure is a structure in the control of the structure is a structure in the structure in the structure is a structure in the structure is a structure in the structure is a structure in the structure in the structure is a structure in the structure in the structure is a structure in the structure in the structure is a structure in the structure in the structure in the structure is a structure in the	-

BI-PKM	Introduction to mathematics	Z	4
	This course is presented in Czech.	· · · · · · · · · · · · · · · · · · ·	
BI-PMA	Programming in Mathematica	Z,ZK	4
Students will be wo	rking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm	ning, rule-based pro	ogramming,
	etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.		

BI-PNO.21 Practical Digital Design	KZ	5
Students get an overview of the contemporary digital design flow and learn practical skills to use synchronous design techniques. They understand the		0 0
and implementation technologies FPGA and ASIC. Students demonstrate practical use of the design techniques in the course project using modern in tools.	Justry-standard CA	AD design
BI-PPA.21 Programming Paradigms	Z,ZK	5
The course deals with basic paradigms of high-level programming languages, including their basic execution models, benefits, and disadvantages of part	icular approaches.	. Functional
programming paradigm and its basic principles are explained in details. Logic programming is introduced as another way of declarative programming. The		
on lambda calculus and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern mainstrustion such as C++ and Java.	am programming	languages
BI-PRR.21 Project management	Z,ZK	5
The aim of the course is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamwork, analy	-	
project, communication, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis, risk as		• · ·
Gantt charts, resource schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especially for stu deepening their knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management positions in large		
also suitable for all those who will develop software or hardware in the form of team projects.	je companies. me	00013013
BI-PRS.21 Practical Statistics	KZ	5
The students will be introduced to methods of applied statistics. They will learn how to work with various types of data, perform analyses, and choose mod	-	
will encompass regression and correlation analysis, analysis of variance and non-parametric methods. Students will learn to use the statistical software methods on data from real problems.	R and will apply th	he studied
BI-PS2 Programming in shell 2	Z,ZK	4
Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In addition into shell and some other particular scripting languages and will get practical experience with shell script programming.	n, they gain a dee	eper insight
BI-PSI.21 Computer Networks	Z,ZK	5
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local n	,	-
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw		
practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux ar	nd Cisco IOS.	
BI-PST.21 Probability and Statistics	Z,ZK	5
Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. T	-	
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction t estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistical	-	-
the statistical dependence of two or more random variables.	hypotheses and de	etermining
BI-PYT.21 Python Programming	KZ	5
The aim of the course is to get acquainted with basic efficient control and data structures of the Python programming language for text and binary data		
between philosophy of programming in Python and in other programming languages will be explained. Each topic is prepared for students in the format		
enables greater accent to individual student work. Before each lab, students pass a short test on the last week topic. Four homeworks plus a semester the semester.	work will be assign	
BI-QAP Quantum algorithms and programming	KZ	5
Course aims at giving students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, or	-	-
are based, and algorithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software developm on Python language. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMM		
might be an advantage. No previous knowledge of physics is assumed.		arr yalon
BI-QUA Quality Assurance	KZ	4
This course introduces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context of	of different types of	software
development and will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should		
analysis, design a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found	-	
BI-SAP.21   Computer Structure and Architecture   Students will get acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arithmetic architecture and units of a digital computer.	Z,ZK	5 ontrollers
memory, I/O communication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple proces	-	
in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.

The fundamental part of the course is the introduction to key ideas of an information system selection, evaluation of information system benefits, ways of information systems implementation and information system implementation based on the project management principles. The emphasis is on the initial customer analysis, customer insight and ability to decide whether it is better to implement any existing information system or to develop a new one from scratch. These factors determine the information system implementation success. At the end of the course information systems security, operation, support, maintenance, legislation impacts, and government information systems topics are discussed.			
BI-TJV.21	Java Technology	Z,ZK	5
The goal is to provide kn	lowledge and skills for developing information systems and applications through concepts used in software development and exp	erience with librarie	es and tools
	from Java language ecosystem. At the course end, the students are able to develop software systems in Java platform.		
BI-TPS.21	Computer Networks Technologies	Z,ZK	5
	students with basic and advanced technologies, components, and interfaces of contemporary computer networks at the physical	-	-
	rovide theoretical foundations of these technologies and explain relevant physical principles. In the labs, the respective technologies are students will get here the second students will be a second student will be a second student student student students.	-	
	ones students will get hands-on experience. Thematically, the course covers both local and long-range optical networks, Ethern always with focus on high-speed networks.		
BI-TS1	Theoretical Seminar I	Z	4
	tended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic		
are treated individually a	and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a state cohort of the course is a state cohort of the comparison of the comparis	work with scientific	papers and

are treated individually a	and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a	work with scientific	papers and
	other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.		
BI-TUR.21	User Interface Design	Z,ZK	5
Students gain a basic o	overview of methods for designing and testing common user interfaces. They get experience to solve the problems where softwa	are and other produ	cts do not
communicate with the us	ser optimally, since the needs and characteristics of users are not taken into account during product development. Students gai	n an overview of me	ethods that
	bring users into the development process to ensure optimal interface for them.		
BI-TWA.21	Design of Web Applications	Z,ZK	5
The basic course of we	eb application development. Initially, the students become familiar with HTTP and its possibilities and partly with some propertie	s of language desc	ribing the
structure (HTML) and p	resentation of document on the Web (CSS). These skills provide the necessary basis for the development of Web applications,	which will be demo	nstrated in
modern libraries facilitat	te the development of Web pages applications. Server side will be demonstrated on PHP technology using frameworks Symform		elopments
	on the client side will be demonstrated using a JavaScript language with library jQuery and possibly MV* framework React		
BI-TZP.21	Technological Fundamentals of Computers	Z,ZK	5
<b>e</b> .	l with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer s		
-	ed to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to redu	-	
limits to the maximum o	perating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a con	nputer power supply	y looks like
	(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.	II	
BI-UKB.21	Introduction to Cybersecurity	Z,ZK	5
	is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic over		yberspace
	d attacker techniques, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace reg		
BI-ULI	Introduction to Linux	Z	2
	iar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become		ommands
a	nd techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (te	rminal).	
BI-UOS.21	Unix-like Operating Systems	KZ	5
Unix-like operating systemating systematic s	ems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fu	nctions of multiuse	r operating
	and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic proper		· .
	access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of		
-	tilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting in	terface, called shell	
BI-VAK.21	Selected Applications of Combinatorics	Z	3
The course aims to intro	duce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the b	asic courses, we ap	proach the
	to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic		
	tion of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) info		
will select problems to	be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimiz	ation and more. Stu	idents will
	also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.		
BI-VDC.21	Virtualization and Data Centers	Z,ZK	5
	to familiarize students with technology basis of cloud computer systems. It shows principles and techniques used in design and		
	various kinds of virtualization and high availability of servers, storages, and software layers. The course guides through data cer	-	
	buds. Student learn current trends in the architecture of IT infrastructure and its configuration for classic and cloud applications.		
-	and operation of complex infrastructures for modern applications with respect to scalability and protection against overloads, or		
BI-VES.21	Embedded Systems	Z,ZK	5
Students learn to design	embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and embedde	ed processors, thei	r integrated
	peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.	<b>-</b>	
BI-VHS	Virtual game worlds	ZK	4
	ts to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current stud	-	
complemented by the t	heory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. T		bilowed by
	the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR device	ces.	

BI-VIZ.21	Data Visualization	KZ	5	
	an overview of the types and characteristics of data as well as suitable visualization methods. This will aid the students in understand	I	ent and their	
application in ar	application in areas such as data mining and machine learning. Within the course, students will be introduced to exploratory data analysis, preprocessing, and ways of visualizing			
different kinds of d	ata such as text, social networks, time series or basic image data processing. Students will get hands-on experience in applications of	selected methods t	o real-world	
	examples in the Python programming language.			
BI-VMM	Selected Mathematical Methods	Z,ZK	4	
The lecture begin	is with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then ac	dress Fourier serie	s and their	
	er, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the w		le examine	
	the linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting			
BI-VPS.21	Selected Topics in Computer Networking	Z,ZK	5	
	upon the Computer Networks course (BI-PSI), obligatory for the program. Students will learn in detail principles, protocols, and technological states and the states of th	-		
	al area networks up to Internet, with focus on switching, routing, security, and virtualization. The emphasis will be on gaining practical		eal network	
	vices in the lab and learning important methods of local area and wide area networks from the viewpoint of functionality, performance	-		
BI-VR1	Virtual reality I	KZ	. 4	
	ual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements o			
The course locus	ses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves cor and shared social activities.	ກ່ອນເສເເວກສາ ເກເກເເກ	, empatry	
BI-VR2		V7	<u> </u>	
	Virtual reality II	KZ	3	
Continuation of the	e course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The obje	ctive is to develop	applications	
	for computer science and gamification in various social metaverse and desktop engines.	7 71/		
BI-VWM.21	Searching the Web and Multimedia Databases	Z,ZK	5	
5	sic overview about search techniques in the web environment that is interpreted as a very large distributed and heterogeneous storag			
	information about search techniques in text and hypertext documents (the web pages themselves) and about feature extraction from arity search in multimedia databases (generally in collections of unstructured data). They also learn techniques for programming web se			
knowledge of simil		arch engines for the	ementioned	
	data types (documents).	1/7		
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4	
-	led system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of			
	robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion control aviantics and development tools in a graphical development tools by using the robot simulator and real bardware to get of			
intenaces, robot n	avigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get technologies.			
BI-ZNF		KZ		
	PHP Framework Nette - basics	I	3

nepoolous of the				
	decision-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but also virtual assistant or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art c		entity, such	

BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4
	This course is presented in Czech.	1	T
BIE-CSI	Introduction to Computer Science	Z	2
This is an introduct	ory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fi	elds but interested	in computer
science, high-scho	ool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The g	oal of the class is t	o introduce
and relate basic p	rinciples of computer science for students to understand, early on, what computer science is, why things such as high-level program	ming languages ar	nd tools are
done the way they	v are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer no	ot just basic compu	iter science
questions but also	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interest	sted in computer s	cience more
	than expected, or even less than before.		
BIE-DIF	Differential equations	Z,ZK	5
This course provide	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential s	olution methods lik	e separation
of variables. Key t	heorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered wi	th methods like ch	aracteristic
polynomial analy	sis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world applicatio	ns. Finally, an intro	duction to
partial differential	equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs	and PDEs, includ	ling implicit
	and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		
BIE-EEC	English language external certificate	Z	4
	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli	ish comparable to o	or exceeding
	the B2 level of the Common European Framework of Reference for Languages.		0
BIE-IMA2	Introduction to Mathematics 2	7	2
	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a		
Oludents reliesit a	examples.	able to apply them	in particular
		7	<u> </u>
BIE-SEG	Systems Engineering	Z	0
	ory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles of		
	essor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After taking		
understand the	difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what con	ncurrency is, as op	posed to
	parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.		
BIE-ZUM	Artificial Intelligence Fundamentals	Z,ZK	4
Students are introd	uced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic	al tasks from the a	reas of state
space search, mult	i-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithm	is and the neural n	etworks, will
	be presented as well.		
FI-TOP	Academic writing	Z	2
	portant and required part of research activity. It is not only about obtaining research results but also about applying them in the form	of publication. Writ	ing scientific
-	e useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the cou		-
	ticle, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting an		
	course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester. Da		-
	on the availability of enrolled students.		
FIT-ITI	Modern IT infrastructure	Z,ZK	5
FIT-SEP		Z,ZK	4
	World Economy and Business	· ·	
	sented in Czech. The course introduces students of technical university to the international business. It does that predominantly by c		
, ,	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as		
corruption and eco	nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of d	iscussions based (	on individual
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
FITE-EHD	Introduction to European Economic History	Z,ZK	3
	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global ecc		-
	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	, ,	
	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institut	-	
does not cover de	tailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c	organizations in his	story. Class
	meetings will consist of a mixture of lecture and discussion.	1	1
NI-AFP	Applied Functional Programming	KZ	5
This course is pres	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p	orogramming langu	lages are on
the rise nowadays	and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master	ring this paradigm	becomes a
	necessary competence of a software engineer: the theory and especially the practice.		
NI-DDM	Distributed Data Mining	KZ	4
Course focuses on	state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of	on experience with	large scale
data processing fra	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	and will be capable	to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.	_,	
NI-DZO		Z,ZK	4
	Digital Image Processing ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg		1
		-	-
	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is al processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR		
		-	-
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray con- gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, a		
			1
NI-IAM	Internet and Multimedia	Z,ZK	4
	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acc		
1.	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u		
	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the eff		-
the quality and late	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording th	e scene up to the	presentation
1	for audience		

NI-LSM	Statistical Modelling Lab	KZ	5
	ented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p		
	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, an		
	At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi	-	properties.
			4
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
	gramming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where		
	plex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills		
	in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development n		
	ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of		
-	ms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involven		
NI-MPL	Managerial Psychology	ZK	2
NI-MSI	Mathematical Structures in Computer Science	Z,ZK	4
Mathematical se	mantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scot	model of lambda	calculus.
	Introduction to category theory.		
NI-OLI	Linux Drivers	Z,ZK	4
	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po		and FPGAs
	ability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development		
	urse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practic		
NI-PDD	Data Preprocessing	, Z,ZK	5
	repare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s	· · ·	_
	and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris		-
	pages.	lics nom inages o	i iioiii web
		1/7	4
NI-PSD	Public Services Design	KZ	4
	oduce students to specifics of UX, Service design and development for public sector. We will look into the design and development p		
suppliers (devs a	nd designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration	n with client repres	entatives.
	Course is aimed at students-designers as well as clients.		
NI-PSL	Programming in Scala	Z,ZK	4
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature		-
advance standard li	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	l libraries e.g. Play,	Cassandra,
	Scalaz, etc.		
NI-REV	Reverse Engineering	Z,ZK	5
Students will get ac	equainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before	ore and after the m	ain function
is called. Students	will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated and how they interact with a second se	ated to reverse eng	ineering of
applications writ	ten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be do	edicated to debugg	ers: how
debuggers and de	bugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer	malware scene. The	ne focus of
	the course is on the seminars, where students will solve practically oriented tasks from the real world.		
NI-SYP	Parsing and Compilers	Z,ZK	5
The module builds u	pon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	rious variants and	applications
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		
NI-TSP	Testing and Reliability	Z,ZK	5
	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre	·	-
-	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu		
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		,
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and		
	rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	•	
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effecti		
	nplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in		
management of col	and development tools (Continuous integration and development).	I the use of modeli	rintegration
		7 71/	4
