Characteristics of the courses of this group of Study Plan: Code=BI-PP.21 Name=Compulsory Courses of Bachelor Study Program Informatics, presented in Czech, version 2021

BI-AG1.21 Algorithms and Graphs 1	Z,ZK	5
The course covers the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing of	urriculum. It links a	and partially
develops the knowledge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the	ne time and space	complexity of
algorithms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asymptotic notat	tion.	
BI-AAG.21 Automata and Grammars	Z,ZK	5
Students are introduced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of fini	ite automata, regu	lar expressions,
and regular grammars, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know	the hierarchy of fo	ormal languages
and they understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity classes F	P and NP.	
BI-BAP.21 Bachelor Thesis	Z	14
BI-BPR.21 Bachelor project	Z	1
1. At the beginning of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	e partial tasks tha	t he / she will
perform during the semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR	at the end of the	semester. 2. The
external supervisor enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.	cvut.cz/student/stu	udijni/formulare).
The completed and signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the	topic of the work	that the student
has reserved is formulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the a	ssignment so that	the assignment
can be supplemented and approved at the end of the semester.		
BI-DBS.21 Database Systems	Z,ZK	5
Students are introduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lea	rn to design smal	databases
(including integrity constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with t	the SQL language	, as well as with
its theoretical foundation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the fun	ndamental concep	ots of transaction
processing, controlling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduce	ed to special ways	of storing data
in relational databases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of data	tabase systems,	debugging and
optimizing database applications, distributed database systems, data stores.		
BI-DML.21 Discrete Mathematics and Logic	Z,ZK	5
Students will get acquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts	from set theory w	ill be explained.
Special attention is paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The co	ourse also lays do	wn the basics of
combinatorics and number theory, with emphasis on modular arithmetics.		
BI-KAB.21 Cryptography and Security	Z,ZK	5
Students will understand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	o use cryptograph	ic keys and
certificates in systems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in a	pplications. Withir	labs, students
will gain practical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedures	s of cryptanalysis.	
BI-LA1.21 Linear Algebra 1	Z,ZK	5
We will introduce students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the fie	ld of real and con	plex numbers
and also over finite fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elin	mination method (GEM) and show
the connection with linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eiger	nvalues and eigen	vectors of a
matrix. We will also demonstrate some applications of these concepts in computer science.		

BI-MA1.21 Mathematical Analysis 1		
	Z,ZK	5
We begin the course by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers and its properties.	-	
and real functions of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of f is then applied to root-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation		
problems (i.e., the issue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical des		
BI-MA2.21 Mathematical Analysis 2	Z,ZK	6
The course completes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will	1 · · 1	ate by parts and
use the substitution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem	to the computation	of elementary
functions with a prescribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithm		°
theorem. Finally, we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, an		-
analytical method of localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the	- <u> </u>	
BI-OSY.21 Operating Systems In this course that is a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and threa	Z,ZK	5
critical regions, thread scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS	· · · · · · · · · · · · · · · · · · ·	,
and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS Windows.	monitoring. They a	c able to design
BI-PSI.21 Computer Networks	Z,ZK	5
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in lo	- I - I - I	-
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced ne	twork technologies	. Students
practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux and Cisco IC	S.	
BI-PST.21 Probability and Statistics	Z,ZK	5
Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variab		
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction	-	
estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statis	tical hypotheses ar	nd determining
the statistical dependence of two or more random variables.	774	
BI-PA1.21 Programming and Algorithmics 1	Z,ZK	7
Students gain the ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, statements, functions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for sea		<i>i i i i</i>
with linked lists and trees.	inclining, soluting, and	manipulating
BI-PA2.21 Programming and Algorithmics 2	Z,ZK	7
Students know the instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack	1 1	-
table). They learn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming		-
copying/moving of objects, operator overloading, inheritance, polymorphism).		
BI-SAP.21 Computer Structure and Architecture	Z,ZK	5
Students will get acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of a	-	
memory, I/O communication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple p	rocessor is practica	ally implemented
in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.		
BI-TZP.21 Technological Fundamentals of Computers Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how compu	Z,ZK	5
level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to		
limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a		
(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.

Characteristics of the courses of this group of Study Plan: Code=BI-PS-PV.21 Name=Compulsory Courses of Specialization Computer Systems and Virtualization, version 2021

BI-ADU.21 Unix Administration	Z,ZK	5
Students will learn the internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. T	hey will understan	d the differences
between user and administrator roles. They will get theoretical and practical knowledge of user management and administration, of users access right	hts, file systems, c	lisk subsystems,
processes, memory, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the k	nowledge from th	e lectures on
specific examples from practice.		
BI-AWD.21 Web and Database Server Administration	Z,ZK	5
Students will get acquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, a	and backup compl	ex database and
web service systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an example of	a web server.	
BI-APS.21 Architectures of Computer Systems	Z,ZK	5
Students will learn the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Sp	ecial emphasis is	given on the
pipelined instruction processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the p	principles of instru	ction processing
not only in scalar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	of the sequential r	nodel of the
program. The course further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory or	oherence and cor	sistency in such
systems.		
BI-SPS.21 Administration of Computer Networks and Services	Z,ZK	5
The aim of the course is to deepen the theoretical knowledge of network technologies and protocols in the environment of network servers administr	rated under the op	perating systems
Linux and Windows. The course syllabus requires the knowledge at the level of courses BIE-PSI, BIE-VPS, and BIE-OSY. Practical skills will be gained	d by practical hand	ls-on experience
with real network infrastructure.		
BI-IDO.21 Introduction to DevOps	Z,ZK	5
The course deals with the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of	systems and serv	ices. The course
covers the tools to support software development, testing and compilation. It also focuses on tools for automating infrastructure management and bu	uilding and deploy	ing software to
the Cloud. It is an introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquai	inted with modern	technologies
used in practice.		
BI-VDC.21 Virtualization and Data Centers	Z,ZK	5
The aim of the course is to familiarize students with technology basis of cloud computer systems. It shows principles and techniques used in design a	and implementation	on of data center
infrastructure, such as various kinds of virtualization and high availability of servers, storages, and software layers. The course guides through data d	center technologie	es from private
to public and hybrid clouds. Student learn current trends in the architecture of IT infrastructure and its configuration for classic and cloud applications	s. Students will un	derstand the
design, validation, and operation of complex infrastructures for modern applications with respect to scalability and protection against overloads, outa	ages, and data los	ses.
BI-VPS.21 Selected Topics in Computer Networking	Z,ZK	5
The course builds upon the Computer Networks course (BI-PSI), obligatory for the program. Students will learn in detail principles, protocols, and techn	nologies used in m	nodern computer
networks from local area networks up to Internet, with focus on switching, routing, security, and virtualization. The emphasis will be on gaining practi	ical experience wi	th real network
devices in the lab and learning important methods of local area and wide area networks from the viewpoint of functionality, performance, and securit	ty.	
BI-ZSB.21 Basics of System Security	Z,ZK	5
The goal of the course is to provide introduction to basic concepts in security of computer systems. Further, the course introduces the basics of fore	nsic analysis and	related topics
such as malware analysis or incident response. After finishing the course student will get both theoretical and practical knowledge in the area of mod	dern operating sys	stems security,
as well as skills needed for independent work in the area of operating system security incident analysis.		

Name of the block: Compulsory elective courses Minimal number of credits of the block: 5 The role of the block: PV

Code of the group: BI-PV-PV.21

Name of the group: Compulsory elective Courses of Specialization Computer Systems and Virtualization, version 2021

Requirement credits in the group: In this group you have to gain at least 5 credits (at most 15)

Requirement courses in the group: In this group you have to complete at least 1 course (at most 3) Credits in the group: 5 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BI-BIG.21	DB Technologies for Big Data Monika Borkovcová Monika Borkovcová Monika Borkovcová (Gar.)	КZ	5	2P+2C	Z,L	PV
BI-TAB.21	Applications of Security in Technology Ji í Dostál, Jan B lohoubek, Martin Kolárik, Martin Pozd na Ji í Dostál Ji í Dostál (Gar.)	Z,ZK	5	2P+2C	L	PV
BI-VES.21	Embedded Systems Miroslav Skrbek Miroslav Skrbek (Gar.)	Z,ZK	5	2P+2C	L	PV

Characteristics of the courses of this group of Study Plan: Code=BI-PV-PV.21 Name=Compulsory elective Courses of Specialization Computer Systems and Virtualization, version 2021

BI-BIG.21	DB Technologies for Big Data	KZ	5
Students will be introdu	ced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course	is focused praction	cally so that after
finishing the course stu	dents were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible	e method of data p	processing (data
collection, transformation	on/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theor	etical foundation	and presentation
of individual technologie	es will be supplemented with specific examples from practice.		
BI-TAB.21	Applications of Security in Technology	Z,ZK	5
The goal of the course	is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Stu	idents get a broad	der overview of
cybersecurity application	ns and extend their knowledge from the cryptology, the secure code, and system, network, and hardware security.		
BI-VES.21	Embedded Systems	Z,ZK	5
Students learn to design	n embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and emb	edded processors	s, their integrated
peripheral circuits, prog	ramming methods, and applications. They get practical skills with development kits and tools.

TVKZV	Physical Education Course	Z	0
BI-ADW.1	Windows Administration	Z,ZK	4
This course is presente	d in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-ALO	Algebra and Logic	Z,ZK	4
The course extends an	d deepens the study of topics touched upon in the basic course in logic.		
BI-AVI.21	Algorithms visually	Z,ZK	4
The course complement	ts other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the compute	r science that exte	end substantially
knowledge presented in	BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.o	rg <http: td="" www.al<=""><td>govision.org>)</td></http:>	govision.org>)
that make understandir	ng the principles of algorithms easy.		
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the cour	se corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieveme	ent - students are	due to: -Take an
active part in the langua	age instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both	the midterm and	the final term
tests with the success r	ate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by	individual teacher	rs during the first
class of the term.			
BI-APJ	Aplication Programming in Java	Z,ZK	4
This course is presente	d in Czech, Advanced technologies in Java		1

		,
NI-AFP Applied Functional Programming	KZ	5
This course is presented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional programming paradigms.		
the rise nowadays and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, r	nastering this paradie	gm becomes a
necessary competence of a software engineer: the theory and especially the practice.		
BIE-ZUM Artificial Intelligence Fundamentals	Z,ZK	4
Students are introduced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the		
space search, multi-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary alg	gorithms and the neu	iral networks, will
be presented as well.	7 71/	
BI-BLE Blender	Z,ZK	4
The course extends knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for the animation. It offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming gramming gr		• •
		4
NI-DSP Database Systems in Practes This course is presented in Czech.	Z,ZK	4
	7.71/	4
BI-STO Storage and Filesystems The student will learn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, ar		1 -
load balancing and high availability.	ia archiving, as so as	s storage scaling,
NI-PSD Public Services Design	KZ	4
The course will introduce students to specifics of UX, Service design and development for public sector. We will look into the design and develop	1	
suppliers (devs and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration of the students will work on projects from partner organizations and will try out collaborations and students will be stude		
Course is aimed at students-designers as well as clients.		
BIE-DIF Differential equations	Z,ZK	5
This course provides a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to esse	1 .	-
of variables. Key theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are cover		-
polynomial analysis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world appli	cations. Finally, an in	troduction to
partial differential equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving	ODEs and PDEs, inc	luding implicit
and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		
NI-DZO Digital Image Processing	Z,ZK	4
This course presents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practice	cal algorithms that ar	e both easy to
implement and have an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background the	nat is also valuable ou	Itside the domain
of digital image processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, h	HDR compression, de	e-blurring in
frequency domain, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gr	ay conversion, contex	xt enhancement,
interactive as-rigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting	g, adding depth, alph	a matting.
NI-DDM Distributed Data Mining	KZ	4
Course focuses on state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain h	ands on experience	with large scale
data processing framework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementa	tions and will be cap	able to propose
approaches to parallelize other algorithms. The course is prezented in czech language.		1
BI-EP1.24 Effective programming 1	KZ	4
The course is taught in Czech.		1
BI-EP2 Efficient Programming 2	KZ	4
Continuation of Efficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving	individual problems	are discussed,
with the aim to choose the best one and avoid implementation errors.		
BI-ANGK English language, contact preparation for the B2 level exam	Z	2
The content of the course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieve		
active part in the language instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in b tests with the success rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified		
class of the term.	by individual teache	is during the list
	7.71/	4
BI-EJA Enterprise Java	Z,ZK	4
The course is on advanced technologies in the Java programming language. The focus is on technologies for development of enterprise informat a database and are accessed through the web interface.	lon systems which a	re connected to
	Z,ZK	4
BI-EJK Enterprise Java and Kotlin The course is on advanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise in		4
architecture, that can be deployed to the cloud.	normation systems v	with microservice
	Z,ZK	5
BI-FMU Financial and Management Accounting The aim of the course is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in	· · ·	-
operations in accounts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal moc		
of economic operations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of ma		
Business Inteligence moduls in Business information systems.	nagomont accounting	g alo babb bi
BI-HAM HW accelerated network traffic monitoring	KZ	4
This course introduces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitorir		1
network traffic are mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike		-
for analysis). The goals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring netwo		
level and to develop their practical abilities in this field.		
BI-HMI History of Mathematics and Informatics	Z,ZK	3
This course is presented in Czech.	, _, <u>_</u> , ,	-
BI-ARD Interactive applications on Arduino	KZ	4
The subject is designed for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple a		1
kits and control varied peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embed		
not only on display of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and there		
Software Engineering students.		

NI-IAM	Internet and Multimedia	Z,ZK	4
	ocused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes a	-	
	hals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practice		
	ons. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the		-
	of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording	g the scene up to	the presentation
for audience.	Introduction to Commuter Ociones	7	2
BIE-CSI	Introduction to Computer Science	Z Z	2
-	class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in othe tudents, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The		
-	bles of computer science for students to understand, early on, what computer science is, why things such as high-level progra	-	
	, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer		
	stions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are inte	-	-
than expected, or even			
BIE-IMA2	Introduction to Mathematics 2	Z	2
	extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they a	. – .	-
examples.			·
BI-CS2	C# language and data access	KZ	4
	data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Mic	rosoft platform. Th	ne students will
get to know objects us	ed to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current te	chnologies such a	as LINQ - a set
of features for querying	g and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL	L (LINQ to Objects	s, LINQ to XML
and LINQ to SQL). And	other objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data	a using domain-sp	ecific objects
(ORM). This part of the	e course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Mo	odel, Storage Mod	lel and Mapping
(XML description).			
BI-CS3	Language C# - design of web applications	KZ	4
The students will be interested	roduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overvious	ew of the developr	ment possibilities
on thisplatform. They w	vill learn to create WebAPI and to use it by client programs.		
BI-SQL.1	Language SQL, advanced	KZ	4
Module is based on know	owledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In	n particular stored	program unites,
triggers, recursive quer	ries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the po	oint of view of spec	ialized database
structures like indexes,	, clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan	and possibilities of	of its. changes
	ures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Ora	acle DBMS and pa	artially on
PostgreSQL.			
BI-QAP	Quantum algorithms and programming	KZ	5
	students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanic		-
-	nms showing advantages and limitations of quantum computing. During tutorials students work in open-source software develo	-	
	(nowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VI	MM and experience	e with Python
	e. No previous knowledge of physics is assumed.		
NI-LSM	Statistical Modelling Lab	KZ	5
	I on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is		
	nd its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms,	and analyses of t	ineir properties.
	ct is on the border of own research and may result in the topic of final work (diploma or bachelor thesis).		
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
	ents interested not only in technical scope of computer science, but also in making products usable - for users and for develop	pers. Students of t	his course can
	edge to design, plan and analyse their own projects in the context of human-centered security.		
NI-MPL	Managerial Psychology	ZK	2
NI-MSI	Mathematical Structures in Computer Science	Z,ZK	4
	cs of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scot	tt model of lambda	a calculus.
Introduction to categor			
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5
	on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Univ		
	and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of L	JSB devices, Linu	ix and Windows
	tion development, and APIs of selected devices.		
BI-MIT	Mikrotik technologies	KZ	3
	f the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are of		-
	providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the		
	e and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary compute	er networks conce	pts like protocols
-	e data-link, network and transport layer of the OSI model.		
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
	mming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, who	-	
	x modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the s	-	
	odern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to wo		
	of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involv		
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5
	5	1 ' 1	-
-	is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and au s (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the ment		
	zation, scientific data visualization, and 3D model scanning.		e, namely nacial

NI-OLI Linux Drivers	Z,ZK	4
The Linux operating system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining		
increase the variability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver developme course provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical experience.	nt for master's st	udents. The
BI-ACM Programming Practices 1	KZ	5
This is a selective course for preparing talented student for representation in international programming contests.		Ū
BI-ACM2 Programming Practices 2 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM3 Programming Practices 3	ΚZ	5
This is a selective course for preparing talented student for representation in international programming contests.		C C
BI-ACM4 Programming Practices 4	KZ	5
This is a selective course for preparing talented student for representation in international programming contests.		
BI-AND.21 Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-CS1 Programming in C#	KZ	4
The goal of the course is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental		
operators, arrays, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def constructors, methods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debuggi		
well as work with files are emphasized.	ig and encopieri	proceeding, de
BI-PJV Programming in Java	Z,ZK	4
This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-PJS.1 JavaScript Programming	KZ	4
Main goal of the course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development	-	
recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for of study.	r this course in th	eir 4th semester
of study. BI-KOT Programing in Kotlin	Z,ZK	4
Kotlin is a modern, statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of adva	,	
The language is fully Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of		
with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages).	· ·	,
NI-PSL Programming in Scala	Z,ZK	4
The course introduces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature		-
advance standard library. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks a	and libraries e.g. l	Play, Cassandra,
Scalaz, etc.	7 71/	4
BI-PMA Programming in Mathematica Students will be working with modern technical and scientific software. Students will learn how to use different programming styles (functional program	Z,ZK	4
etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.	nining, rule base	a programmig,
BI-PHP.1 Programing in PHP	KZ	4
The course is taught in Czech Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices a	nd will use tool t	nat eases
development in PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register f	or BIE-TWA.1. Th	ney should
register for this course in their 3rd semester of study.		_
BI-PS2 Programming in shell 2	Z,ZK	4
Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In addition into shell and some other particular scripting languages and will get practical experience with shell script programming.	lition, they gain a	deeper insight
NI-PDD Data Preprocessing	Z,ZK	5
Students learn to prepare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various dat		
time series, etc., and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of character		-
pages.		
BI-PKM Introduction to mathematics This course is presented in Czech.	Z	4
NI-REV Reverse Engineering	Z,ZK	5
Students will get acquainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens it	pefore and after t	ne main function
is called. Students will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is ded		
applications written in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be de debuggers and debugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the compute		-
the course is on the seminars, where students will solve practically oriented tasks from the real world.		
BI-SCE1 Computer Engineering Seminar I	Z	4
The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance		
are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	ne subject is wor	k with scientific
articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teac	hers. The topics a	are new for each
semester. PL SCE2 Computer Engineering Sominer II	7	А
BI-SCE2 Computer Engineering Seminar II The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance	Z a to failures and a	4 attacks Students
are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the		
articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teac	-	
semester.		
BI-ST1 Network Technology 1	Z	3
The subject is oriented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredite	d under the Cisc	o Netacad -
CCNA1 - R&S Introduction to Networks.		
BI-ST2 Network Technology 2 This course is presented in Czech.	Z	3

BI-ST3 Network Technology 3 Students will further enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented duri	Z	3
	ng BI-ST1 and BI-	ST2 courses will
get further extended in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, pre	edictability, extension	on beyond a
simple topology, security, etc.		
BI-ST4 Network Technology 4	Z	3
Students will further enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switch		
BI-ST2 courses got further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased ef beyond a simple topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a complete		-
Broadcast Multiple Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and swi		
recoveries, and emergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitig	-	
network running.	, ,	Ū
BI-SKJ.21 Scripting Languages	Z,ZK	4
Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In ac	ldition, they gain a	deeper insight
into shell and some other particular scripting languages and will get practical experience with shell script programming.		
BI-SOJ Machine Oriented Languages	Z,ZK	4
Students of the course will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimised of the most common PC platform focusing of the most common PC platform focusing on optimized of the most common PC platform focusing of the most common PC platform focus platform focus platform focus platform focus platform focus platfor	-	
and efficient cooperation of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of vie	ew linked to higher	level languages.
This knowledge will be used during reverse engineering, optimization, and evaluation of code security.		
BI-SEP World Economy and Business	Z,ZK	4
This course is presented in Czech. The course introduces students of technical university to the international business. It does that predominantly b and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as we		
corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form		
readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
NI-SYP Parsing and Compilers	Z,ZK	5
The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge	1 / 1	-
of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		
BI-GIT Version control system GIT	KZ	2
Students will be introduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and p	ractically. In this pa	rticular system
even the implementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git serve	r administrators.	
BIE-SEG Systems Engineering	Z	0
This is an introductory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles		
to understand processor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After tak	-	
understand the difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what co	oncurrency is, as o	pposed to
parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.	7	1

BI-TEX TeX and Typography	Z,ZK	4
This course is presented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of	the course focuse	s on typographic
rules.		-
BI-EHD Introduction to European Economic History This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	3
BI-KSA Cultural and Social Anthropology	ZK	2
The one-semester course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the div	1	1
anthropological research from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, h	-	-
shown. The course is presented in Czech.	-	
BI-ULI Introduction to Linux	Z	2
Students become familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become	ne familiar with ba	sic commands
and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (terminal).		
BI-OPT Introduction to Optical Networks	Z,ZK	4
Students get basic overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on of optical network technology and on their solutions. The course will include the history of optical communications, an overview of passive components of optical network technology.	•	
dispersion compensators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission s		-
the most up-to-date topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, suc		
ultrastable frequency transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their paramete		
from practice.		
NI-VCC Virtualization and Cloud Computing	Z,ZK	5
Students will gain knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies ar	-	
acquainted with virtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to ef		•
performance parameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect management of complex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical sk		-
and development tools (Continuous integration and development).		Juennintegration
BI-VHS Virtual game worlds	ZK	4
The course leads students to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current	1	-
complemented by the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual work		-
the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR devices.		
BI-VR1 Virtual reality I	KZ	4
Introduction to Virtual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirement	ts of virtual worlds	communication.
The course focuses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves of	computational thin	king, empathy
and shared social activities.		
BI-VR2 Virtual reality II	KZ	3
Continuation of the course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The for computer science and gamification in various social metaverse and desktop engines.	objective is to deve	elop applications
BI-VAK.21 Selected Applications of Combinatorics	Z	3
The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to t	1	-
issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic knowledge needed to design and analyze algorithms and introduce some basic knowledge needed to design and analyze algorithms and introduce some basic knowledge needed to design and analyze algorithms and introduce some basic knowledge needed to design and analyze algorithms and introduce some basic knowledge needed to design and analyze algorithms and introduce some basic knowledge		
with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical)	informatics. Areas	s from which we
will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optir	nization and more.	Students will
also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.	·	1
BI-VMM Selected Mathematical Methods	Z,ZK	4
The lecture begins with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then properties. Further, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the		
the linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting examples.		
NI-VYC Computability	Z,ZK	4
Classical theory of recursive functions and effective computability.	2,210	
BI-ZS10 Bachelor internship abroad for 10 credits	Z	10
Each student can once within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or		1
internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content.		
internship. Auxiliary courses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits	-	
employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divide	d into two subjects	s if the internship
exceeds the academic year's dead-line. BI-ZS20 Bachelor internship abroad for 20 credits	7	20

employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divide	-	
exceeds the academic year's dead-line.		
BI-ZIVS Intelligent Embedded System Fundamentals	KZ	4
Intelligent embedded system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The air	1	1
modern humanoid robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion		
interfaces, robot navigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to g	et practical experi	ence with these
technologies.		

BI-ZPI	Process engineering	KZ	4
Students will learn fu	ndamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles	, of process model	ling and they will
learn basics of the us	ed notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of	ousiness process	es using modern
CASE tools. The role	of process engineering for information systems development is discussed as well as its importance in the overall context of info	ormation and busi	ness strategy of
an enterprise.			
BI-ZNF	PHP Framework Nette - basics	KZ	3
Students will gain the	basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czecl	n popular framewo	ork. The resulting
knowledge should se	rve for the efficient creation of a web backend in PHP language.		
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
This course is preser	ted in Czech.		
BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4
This course is preser	ted in Czech.		I

Characteristics of the courses of this group of Study Plan: Code=BI-PV-VO.21 Name=Elective vocational Courses for a Bachelor Specialization BI-PV.21, version 2021

 BI-BIG.21
 DB Technologies for Big Data
 KZ
 5

 Students will be introduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is focused practically so that after finishing the course students were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible method of data processing (data collection, transformation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretical foundation and presentation of individual technologies will be supplemented with specific examples from practice.

BI-TAB.21 Applications of Security in Technology	Z,ZK	5
The goal of the course is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries cybersecurity applications and extend their knowledge from the cryptology, the secure code, and system, network, and hardware security.	. Students get a broad	der overview of
BI-VES.21 Embedded Systems	Z,ZK	5
Students learn to design embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and	1 .	-
peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.		
BI-MPP.21 Methods of interfacing peripheral devices The course is focused on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on	Z,ZK	5
includes both PC side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts		
drivers, simple application development, and APIs of selected devices.	,	
BI-MVT.21 Modern Visualisation Technologies	Z,ZK	5
The goal of the course is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual ar high resolution displays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the r	•	
and procedural visualization, scientific data visualization, and 3D model scanning.	nontionioù toonnologie	o, namoly naolai
BI-AG2.21 Algorithms and Graphs 2	Z,ZK	5
This course, presented in Czech, introduces basic algorithms and concepts of graph theory as a follow=up on the introduction given in the complete state structure and exercise dependence to a structure of the s		
delves into advances data structures and amortized complexity analysis. It also includes a very light introduction to approximation algorithms. Find BIE-AG2.21.	or English version of the	ne course see
BI-ASB.21 Applied Network Security	Z,ZK	5
The aim of the course is to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge	e gained in course BI	
security applications like the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After fit	hishing the course stu	dent will get
knowledge of security applications in computer networks. BI-BEK.21 Secure Code	Z,ZK	5
The students will learn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After g		-
theory, students gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not		
administrator privileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of se	-	
security and database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and BI-EPP.21 Economic Business Processes	Z,ZK	nem. 5
The aim of the course is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic econo	1 1	-
in the market environment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases		
establishment of the company, through the management of property and capital structure, financing of the company, determining the cost function and the structure of the company determining the cost function of the company determining the cost fun	on of the company an	d labor costs, to
evaluating the financial health of the company and its eventual rehabilitation or termination. BI-EHA.21 Ethical Hacking	Z.ZK	5
The goal of the course is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threat	· ·	
exploitation in computer networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The f		-
vulnerabilities testing and the following process of penetration test documentation.		
BI-FBI.21 Financial Business Intelligence	Z,ZK	5
The aim of the course is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for b and other indicators for comparison with other companies and management decision process at the tactical and strategic level. The second view	-	-
for financial management and prediction of business development. Management accounting allows monitoring of the financial status and perform	-	-
accounting periods, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital accounting the return of the second secon		
assess options related to future business decisions. The principles of management accounting, described in this course, are the basis of Busine information systems, decision support systems, and other knowledge-oriented systems.	ss Intelligence modul	es in business
BI-HWB.21 Hardware Security	Z,ZK	5
The course deals with hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with t		
modules, security features of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of		-
attacks and tampering with hardware during manufacture. Students will have an overview of contact and contactless smart card technology incl for multi-factor authentication (biometrics). Students will understand methods of efficient implementations of ciphers.	uding applications and	d related topics
BI-IOT.21 Internet of Things	Z,ZK	5
The course focuses on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to		rs and actuators,
wireless communication technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT		
areas. Within the computer labs, students will gain practical experience with developing simple IoT systems using common development environ software - Arduino, Raspberry Pi OS).	iments (nardware - Al	RM, ESP, STM;
BI-JPO.21 Computer Units	Z,ZK	5
Students deepen their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in	detail with the interna	
organization of computer units and processors and their interactions with the environment, including accelerating arithmetic-logic units and using		-
of multiplication. The organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, correction for parallel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of the second	-	
the environment and the architecture of the bus system. The problems will be practically evaluated in the labs and with the help of the educational		
and programmable hardware design kits (FPGA).		
BI-KOM.21 Conceptual Modelling The course is focused on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning	Z,ZK	5 in the ability to
categorize and specify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontologi		-
notation. Next, they learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data rules and constraints using the OCL language and foundations of OWL/RDF semantic data rules are set of the other semantic data rules are set of the other set.	presentation in the In	ternet. They also
learn the foundations of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The		e BPMN notation
will be taught. The course is designed with the respect to continuation in software implementations. Recommended optional follow-up course: B BI-LA2.21 Linear Algebra 2	-ZPI.	5
Studenti si v tomto p edm tu rozší í znalosti z p edm tu BI-LA1, kde se pracovalo pouze s vektory ve form n-tic ísel. Zde si zavedeme vektor	1 1	-
Seznámíme se také s pojmem skalární sou in a lineární zobrazení, což nám dovolí ukázat souvislost s lineární algebrou, geometrií a po íta ov	ou grafikou. Dalším ve	elkým tématem
bude numerická lineární algebra, kde si ukážeme potíže s ešením soustav lineárních rovnic na po íta i a možnosti, jak se s tímto problémem v	/po ádat s d razem n	a rozklady matic.
Ukážeme si také aplikace lineární algebry v r zných oborech.		

DLLOO 04 Mathematical Lania	7 71/	5
BI-LOG.21 Mathematical Logic	Z,ZK	5
The course focuses on the basics of propositional and predicate logic. It starts from the semantic point of view. Based on the notion of truth, satisfia		
logical consequence of formulas are defined. Methods for determining the satisfiability of formulas, some of which are used for automated proving, a	are explained. This	relates to the P
vs. NP problem and Boolean functions in propositional logic. In predicate logic, the course further deals with formal theories, such as arithmetics, ar	d their models. Th	e syntactic
approach to mathematical logic is demonstrated on the axiomatic system of propositional logic and its properties. Gödel's incompleteness theorems	is explained.	
BI-MDF.21 Modern Data Formats	KZ	3
The goal of the course is to give an overview of commonly used data formats for typical types of data. There will be a description of each data type		ats used for that
data type along with tools available to work with such data. After finishing the course, the students should know how to work with common data, e.g		
		5
	Z,ZK	-
Students get acquainted with multimedia technologies and applications for 2D/3D bitmap and vector graphics. During the course, current tools for w		
graphics and animation will be introduced. Students learn several basic techniques of creation and editing content in computer graphics, introduction to		-
technologies. They learn to use multimedia transmission and representation systems, including real-time multimedia processing. They understand the	ne principle of ope	ration and use
of graphics processing cards. They gain a number of practical skills, such as vectorizing raster images, retouching photos, or creating 3D models.		
BI-OOP.21 Object-Oriented Programming	Z,ZK	5
Object-oriented programming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate togeth	er by message pa	ssing. In this
course students get acquainted with the main principles of object-oriented programming and design, used in modern programming languages. The e	mphasis is on prac	ctical techniques
for developing software, which includes testing, error handing, refactoring, and application of design pattern.		
BI-PGR.21 Computer graphics programming	Z,ZK	5
After attending this curse, students can program a simple interactive 3D graphical application like a computer game or scientific visualization, desig		-
		•
geometric details and materials (like wall surface, wood, sky), and set up the lighting. At the same time, they understand the fundamental principles and		
such as graphical pipeline, geometric transformations, or lighting model. They gain knowledge allowing orientation in computer graphics and repres	-	-
professional development, e.g., GPU programming and animations. They get used to techniques utilized in geometric modeling, modeling curves and s		
BI-PRS.21 Practical Statistics	KZ	5
The students will be introduced to methods of applied statistics. They will learn how to work with various types of data, perform analyses, and choose	models fitting the	data. The course
will encompass regression and correlation analysis, analysis of variance and non-parametric methods. Students will learn to use the statistical softv	are R and will app	bly the studied
methods on data from real problems.		
BI-PNO.21 Practical Digital Design	KZ	5
Students get an overview of the contemporary digital design flow and learn practical skills to use synchronous design techniques. They understand		-
and implementation technologies FPGA and ASIC. Students demonstrate practical use of the design techniques in the course project using modern	industry-standard	I CAD design
tools.		_
BI-PAI.21 Law and Informatics	ZK	5
The aim of the course is to introduce students into the basic legal instruments that they will encounter in their practice. Students will gain knowledge	of doing business	s in the Czech
Republic and will be alerted to the pitfalls that await them in business from the point of view of law. They will understand the process of concluding of	ontracts in real an	d Internet
environment, will know their responsibilities in working with the Internet, will be familiar with the institutes of intellectual property law, and will be able	e to use commerci	al license types
and open-source licenses. Emphasis will also be put on the legal protection of data on the Internet, the registration of Internet domains and protecti	on against their mi	isuse. Students
will also be alerted to such behaviour in the field of IT that can be classified as criminal under the Czech law. The course will also include analyses of	of real cases from	practice.
BI-PJP.21 Programming Languages and Compilers	Z,ZK	5
Students learn basic compiling methods of programming languages. They are introduced to intermediate representations used in current compilers	1 ' 1	
create a specification of a translation of a text that conforms a given syntax, to a target code and also to create a compiler based on the specification	n. The complier ca	in translate not
only a programming language but any text in a language generated by a given LL input grammar.		_
BI-PPA.21 Programming Paradigms	Z,ZK	5
The course deals with basic paradigms of high-level programming languages, including their basic execution models, benefits, and disadvantages o	particular approa	ches. Functional
programming paradigm and its basic principles are explained in details. Logic programming is introduced as another way of declarative programming	g. The principles a	re demonstrated
on lambda calculus and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern mai	nstream programm	ning languages
such as C++ and Java.		
BI-PGA.21 Programming of Graphic Applications	Z,ZK	5
The course will present the possibilities of current professional open-source tools for image editing, video editing, 3D animation (GIMP, Blender) and t		-
data (3D scenes, mathematical data). Emphasis will be placed on the possibilities of further enhancement of the presented software tools, both usin		-
	ig built-in scripting	languages and
by implementation of plugins.		_
BI-PJS.21 JavaScript Programming	KZ	5
The course is an introduction to Javascript programming. Students will also learn best practices and get acquai nted with tools that make code deve	lopment in Javasc	ript easier.
BI-PYT.21 Python Programming	KZ	5
The aim of the course is to get acquainted with basic efficient control and data structures of the Python programming language for text and binary d	ata processing. Th	e differences
between philosophy of programming in Python and in other programming languages will be explained. Each topic is prepared for students in the for	nat of a Jupyter ne	otebook, which
enables greater accent to individual student work. Before each lab, students pass a short test on the last week topic. Four homeworks plus a semes		
the semester.		0 0
	Z,ZK	5
		-
The aim of the course is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamwork, a	-	-
project, communication, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis, risk		-
Gantt charts, resource schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especially for		
deepening their knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management positions in	large companies.	The course is
also suitable for all those who will develop software or hardware in the form of team projects.		
BI-SIP.21 Network Programming	Z	5
The course covers fundamental topics of programming network applications. It consists of 4 parts. The introductory part is focused on low-level programming	ramming using B	SD sockets. The
second part is devoted to designing communication protocols and their verification. The third part introduces the principles and applications of midd		
introduces basic modern models of distributed computing - P2P and blockchain. All topics will be first explained theoretically and then practices in c	•	
programming language environment.		-
BI-SWI.21 Software Engineering	Z,ZK	5
		-
Students get acquainted with methods of analysis and design of larger software projects that are typically designed and implemented in teams. The		
their knowledge during the analysis and design of larger software systems that will be developed in the concurrent course BIE-SP1. Students get har	us-on experience	with CASE tools
using the visual language UML for modeling and solving software problems. Students learn the basics of object-oriented analysis, architecture design		
		hin the course,
students also gain a theoretical basis in the field of project management, estimation of costs of software projects, and methods of their development		hin the course,

BI-SP1.21	Team Software Project 1	KZ	5		
	experience with the analysis, design, and prototyping of a large-scale software system. Theoretical support is provided in the	e BIE-SWI course	that runs		
concurrently and that teaches students necessary techniques and principles. Teams consisting of 4-6 students will work on a specific project. The teacher, in the role of the team and					
project leader, regularly consults with the team (at the seminars) both the formal and material aspects of the software design. The resulting software artefact will be further developed					
and finished in the BIE-		1/7			
BI-SP2.21	Team Software Project 2 n experience with the iterative development process while working on a large-scale software project. The first iteration is the re-	KZ	5		
	up, the functionality, testing, and documentation of the software system being developed will be emphasized. Students will we				
	the team and project leader, regularly consults with the team (at the seminars) the formal as well as material aspects of their s				
BI-ML1.21	Machine Learning 1	Z.ZK	5		
	is to introduce students to the basic methods of machine learning. They get theoretical understanding and practical working	. , .	-		
classification models in	the supervised learning scenario and clustering models in the unsupervised scenario. Students will be aware of the relations	ships between mo	del bias and		
variance, and know the	fundamentals of assessing model quality. Moreover, they learn the basic techniques of data preprocessing and multidimension	onal data visualiza	tion. In practical		
	s and scikit libraries in Python will be used.

	lifferent types of camera systems and a variety of methods for image and video processing. The course is focused on practical	•			
	at the graduates may encounter.		C C		
BI-SRC.21	Real-time systems	Z,ZK	5		
Students obtain the bas	sic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issu	es. Theoretical kn	owledge from		
lectures will be experim	entally verified in computer labs. The course is mainly focused on embedded RT systems, therefore the design kits in the lab	are the same as	in the BIE-VES		
course.					
BI-TJV.21	Java Technology	Z,ZK	5		
	nowledge and skills for developing information systems and applications through concepts used in software development and	experience with lil	praries and tools		
	bsystem. At the course end, the students are able to develop software systems in Java platform.	7 71			
BI-TPS.21	Computer Networks Technologies	Z,ZK	5 avarian ta tha		
	students with basic and advanced technologies, components, and interfaces of contemporary computer networks at the phys provide theoretical foundations of these technologies and explain relevant physical principles. In the labs, the respective techn	-	-		
	t ones students will get hands-on experience. Thematically, the course covers both local and long-range optical networks, Eth	-			
always with focus on hi		,	,		
BI-TIS.21	Information Systems	Z,ZK	5		
The goal of this course	is to familiarise students with the information systems topic and information systems implementation principles. During the co	ourse, students ar	e introduced to		
-	types of systems and their usage in specific industry segments. Students are familiarised with the CRM, ERP, MRP and oth		-		
	f the course is the introduction to key ideas of an information system selection, evaluation of information system benefits, wa				
	prmation system implementation based on the project management principles. The emphasis is on the initial customer analys	-			
	ter to implement any existing information system or to develop a new one from scratch. These factors determine the information e information systems security, operation, support, maintenance, legislation impacts, and government information systems to				
BI-TUR.21	User Interface Design	Z,ZK	5		
-	verview of methods for designing and testing common user interfaces. They get experience to solve the problems where soft		-		
, e	user optimally, since the needs and characteristics of users are not taken into account during product development. Students				
	relopment process to ensure optimal interface for them.				
BI-TWA.21	Design of Web Applications	Z,ZK	5		
The basic course of we	b application development. Initially, the students become familiar with HTTP and its possibilities and partly with some propert		escribing the		
. , .	resentation of document on the Web (CSS). These skills provide the necessary basis for the development of Web application				
	te the development of Web pages applications. Server side will be demonstrated on PHP technology using frameworks Symf	fony 2, Doctrine 2.	Developments		
	e demonstrated using a JavaScript language with library jQuery and possibly MV* framework React.				
BI-UKB.21	Introduction to Cybersecurity	Z,ZK	5		
e e	is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic or s, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace regulations.	overview of threats	in cyberspace		
BI-VIZ.21	Data Visualization	KZ	5		
	Plate visualization rerview of the types and characteristics of data as well as suitable visualization methods. This will aid the students in understa				
	ch as data mining and machine learning. Within the course, students will be introduced to exploratory data analysis, preproce	-			
	uch as text, social networks, time series or basic image data processing. Students will get hands-on experience in applications		-		
examples in the Python	programming language.				
BI-VWM.21	Searching the Web and Multimedia Databases	Z,ZK	5		
	rview about search techniques in the web environment that is interpreted as a very large distributed and heterogeneous stora				
	ation about search techniques in text and hypertext documents (the web pages themselves) and about feature extraction fro				
	search in multimedia databases (generally in collections of unstructured data). They also learn techniques for programming web	search engines fo	or the mentioned		
data types (documents		7 71/	F		
BI-FEM.21	Fundamentals of Economics	Z,ZK	5		
	students to discover basics of economic theory, which will then be used in subsequent courses of economics and manageme conomic and macroeconomic topics.	ant. It contains a ge	FIETAI UVEI VIEW

	roduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will for				
-	and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, descript		-		
	stems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of c	-			
	dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also give				
-	stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industr	rial implementation	n of continuous		
and digital controllers a					

Artificial Intelligence Fundamentals

Z,ZK Basic course on introduction to artificial intelligence with emphasis on symbolic techniques. The design of an intelligent agent and the techniques needed to create it will be discussed, especially at the decision-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but also by a non-physical entity, such as a virtual assistant or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art during the course.

BI-ASB.21	Applied Network Security	Z,ZK	5
The aim of the co	irse is to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge gaine	d in course BI-PSI	with actual
security applicat	ions like the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After finishin	g the course stude	nt will get
	knowledge of security applications in computer networks.		
BI-AVI.21	Algorithms visually	Z,ZK	4
	ements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer sc ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&		
kilowiedge present	that make understanding the principles of algorithms easy.	t,mtp.//www.aigovie	sion.orgægt,)
BI-AWD.21	Web and Database Server Administration	Z,ZK	5
	cquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and		1
-	vice systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exan		
BI-BAP.21	Bachelor Thesis	Z	14
BI-BEK.21	Secure Code	Z,ZK	5
	arn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting fa	, ,	at modeling
theory, students	s gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every	program needs to	run with
	rileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing		-
	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and th	-	
BI-BIG.21	DB Technologies for Big Data	KZ	5
	roduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is f		
-	e students were able to choose suitable tools (mostly open source) and techniques,design and implement a simplest reproducible me mation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretic		
	of individual technologies will be supplemented with specific examples from practice.		Diesentation
BI-BLE	Blender	Z.ZK	4
	I bicinician Ids knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those i	, ,	-
	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	-	-
BI-BPR.21	Bachelor project	Z	1
1. At the beginnir	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	partial tasks that h	e / she will
perform during the	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at t	he end of the seme	ester. 2. The
	r enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvu	•	,
-	d signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top		
has reserved is for	mulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assignmented and approved at the and of the semester	gnment so that the	assignment
BI-CCN	can be supplemented and approved at the end of the semester.	Z.ZK	5
	Compiler Construction uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	, ,	-
	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	-	
		theme of the class	S.

Attention is focused on the object oriented programming in C# - class def iods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging well as work with files are emphasized. C# language and data access and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros ts used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current technorying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data used to current technologies in the application development on the .NET platform. They will also get to know the Conceptual Mode (XML description). Language C# - design of web applications e introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview on thisplatform. They will learn to create WebAPI and to use it by client programs. Database Systems roduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear constraints) using a conceptual model and implement them in a relational databa	KZ onstruction, types of inition and class in and exception pro KZ off platform. BI-EJK	Enterprise Java and Kotlin	Z,ZK	4
The course is on a	dvanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise informa	1	nicroservice
	architecture, that can be deployed to the cloud.		
BI-EP1.24	Effective programming 1	KZ	4
	The course is taught in Czech.	· · ·	
BI-EP2	Efficient Programming 2	KZ	4
Continuation of E	ficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving indivi	dual problems are	discussed,
	with the aim to choose the best one and avoid implementation errors.		
BI-EPP.21	Economic Business Processes	Z,ZK	5
	rrse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and		
	ronment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the		
establishment of th	he company, through the management of property and capital structure, financing of the company, determining the cost function of the	e company and lab	or costs, to
	evaluating the financial health of the company and its eventual rehabilitation or termination.		
BI-FBI.21	Financial Business Intelligence	Z,ZK	5
	rse is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for business	-	-
	rs for comparison with other companies and management decision process at the tactical and strategic level. The second view is mar	•	•
-	ement and prediction of business development. Management accounting allows monitoring of the financial status and performance of		
	ds, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital an lated to future business decisions. The principles of management accounting, described in this course, are the basis of Business Inte		
	information systems, decision support systems, and other knowledge-oriented systems.	ingence modules in	i business
BI-FEM.21	Fundamentals of Economics	Z,ZK	5
	the students to discover basics of economic theory, which will then be used in subsequent courses of economics and management.	I	-
	of fundamental microeconomic and macroeconomic topics.	it contains a gener	
BI-FMU	Financial and Management Accounting	Z,ZK	5
-	rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa		
	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification		
	rations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manage		-
	Business Inteligence moduls in Business information systems.		
BI-GIT	Version control system GIT	KZ	2
	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract	1 1	
	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git		-
BI-GIT.21	SW Development Technologies	7	3
	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	Git, the information	
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		0
BI-HAM	HW accelerated network traffic monitoring	KZ	4
	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The	I I	nalysis of
network traffic are	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s	ource of informatio	n and data
for analysis). The g	poals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traff	ic on a hardware a	nd software
	level and to develop their practical abilities in this field.		
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
This course is for	students interested not only in technical scope of computer science, but also in making products usable - for users and for developer	s. Students of this of	course can
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.	,	
BI-HMI	History of Mathematics and Informatics	Z,ZK	3
	This course is presented in Czech.		
BI-HWB.21	Hardware Security	Z,ZK	5
The course deals w	rith hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with the opera	ating principles of cr	yptographic
-	eatures of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of HW re-	-	
attacks and tampe	ering with hardware during manufacture. Students will have an overview of contact and contactless smart card technology including a	pplications and rela	ated topics
	for multi-factor authentication (biometrics). Students will understand methods of efficient implementations of ciphers.		
BI-IDO.21	Introduction to DevOps	Z,ZK	5
	vith the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of sys		
	o support software development, testing and compilation. It also focuses on tools for automating infrastructure management and build		
the Cloud. It is an	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquaint used in practice.	ed with modern led	rinologies
BLIOS		KZ	4
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad This course is presented in Czech.		4
DUOTA		774	
BI-IOT.21	Internet of Things		5
	s on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an over ication technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT archite		
	computer labs, students will gain practical experience with developing simple IoT systems using common development environments		
	software - Arduino, Raspberry Pi OS).	(naranaro 7 mini,	,,
BI-JPO.21	Computer Units	Z,ZK	5
	their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in detail v		
	nputer units and processors and their interactions with the environment, including accelerating arithmetic-logic units and using approp		
-	e organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, includin	-	
	lel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of comm	-	
the environment ar	d the architecture of the bus system. The problems will be practically evaluated in the labs and with the help of the educational micropre	ogrammed process	or simulator
	and programmable hardware design kits (FPGA).		
BI-KAB.21	Cryptography and Security	Z,ZK	5
Students will und	derstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	use cryptographic	keys and
-	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in app		
will gain pr	actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce	oures of cryptanaly	'SIS.

DUKOMAA		771	_	
BI-KOM.21	Conceptual Modelling	Z,ZK	5	
The course is focu	sed on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te	rms in a domain, th	ne ability to	
categorize and spe	cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struct	tural modeling in th	e OntoUML	
notation. Next, they learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data representation in the Internet. They also				
-			-	
	ns of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The DEMO n		vin notation	
Wil	I be taught. The course is designed with the respect to continuation in software implementations. Recommended optional follow-up c	ourse: BI-ZPI.		
BI-KOT	Programing in Kotlin	Z,ZK	4	
	n, statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advar	I ' I	structions	
The language is fu	Illy Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a r	-	ctional way	
	with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)	1-		
BI-KSA	Cultural and Social Anthropology	ZK	2	
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversit	I I		
		,	· ·	
anthropological res	search from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, health	n, history, death, et	c) will be	
	shown. The course is presented in Czech.			
BI-LA1.21	Linear Algebra 1	Z,ZK	5	
	students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field	I ' I	-	
		-		
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimina	-		
the connection w	ith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenv	alues and eigenve	ctors of a	
	matrix. We will also demonstrate some applications of these concepts in computer science.			
BI-LA2.21	Linear Algebra 2	Z,ZK	5	
	Linear Algebra 2	· · ·		
Studenti si v tomto	p edm tu rozší í znalosti z p edm tu BI-LA1, kde se pracovalo pouze s vektory ve form n-tic ísel. Zde si zavedeme vektorový pros	tor v abstraktní obe	ecné form .

	eární algebra, kde si ukážeme potíže s ešením soustav lineárních rovnic na po íta i a možnosti, jak se s tímto problémem vypo ádal			
	Ukážeme si také aplikace lineární algebry v r zných oborech.			
BI-LOG.21	Mathematical Logic	Z,ZK	5	
The course focuse	s on the basics of propositional and predicate logic. It starts from the semantic point of view. Based on the notion of truth, satisfiability	y, logical equivalen	ce, and the	
	e of formulas are defined. Methods for determining the satisfiability of formulas, some of which are used for automated proving, are e			
•		•		
	and Boolean functions in propositional logic. In predicate logic, the course further deals with formal theories, such as arithmetics, and		-	
approach	n to mathematical logic is demonstrated on the axiomatic system of propositional logic and its properties. Gödel's incompleteness the	orems is explained	1.	
BI-MA1.21	Mathematical Analysis 1	Z,ZK	5	
	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers.	· · ·	-	
-		-		
	f a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of function			
is then applied to ro	ot-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and	solution of simple of	optimization	
problems (i.e., the is	ssue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical descripti	ion of complexity of	algorithms.	
BI-MA2.21		Z,ZK	6	
	Mathematical Analysis 2	· · ·	-	
The course comple	tes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will learn	how to integrate b	y parts and	
use the substitutio	n method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to the	ne computation of e	elementary	
functions with a pre	escribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, an	d its analysis usinc	the Master	
	we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and H	, ,		
-			-	
analytical method o	f localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ	ration of multivariat	e functions.	
BI-MDF.21	Modern Data Formats	KZ	3	
The goal of the cou	urse is to give an overview of commonly used data formats for typical types of data. There will be a description of each data type and	the data formats u	sed for that	
	e along with tools available to work with such data. After finishing the course, the students should know how to work with common da			
		-		
BI-MGA.21	Multimedia and Graphics Applications	Z,ZK	5	
Students get acq	uainted with multimedia technologies and applications for 2D/3D bitmap and vector graphics. During the course, current tools for worl	king with images, v	ideos, 3D	
graphics and anima	ation will be introduced. Students learn several basic techniques of creation and editing content in computer graphics, introduction to gra	phic formats, and c	ompression	
	y learn to use multimedia transmission and representation systems, including real-time multimedia processing. They understand the	-		
l	of graphics processing cards. They gain a number of practical skills, such as vectorizing raster images, retouching photos, or creating	3D models.		
BI-MIT	Mikrotik technologies	KZ	3	
The main motivation	n of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are con	nmonly used by the		
	vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the mo			
		, 1		
and now to auminis	trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne	aworks concepts lik		
	and technologies of the data-link, network and transport layer of the OSI model.			
BI-ML1.21	Machine Learning 1	Z,ZK	5	
	course is to introduce students to the basic methods of machine learning. They get theoretical understanding and practical working ki			
-				
	dels in the supervised learning scenario and clustering models in the unsupervised scenario. Students will be aware of the relationsh	-		
variance, and know	/ the fundamentals of assessing model quality. Moreover, they learn the basic techniques of data preprocessing and multidimensional	data visualization.	In practical	
	demonstrations, pandas and scikit libraries in Python will be used.			
BI-ML2.21		Z,ZK	5	
	Machine Learning 2	I ' I		
-	purse is to introduce students to the selected advanced methods of machine learning. In the supervised learning scenario, they, in pa			
and neural networ	ks. In the unsupervised learning scenario students learn the principal component analysis and other dimensionality reduction method	Is. Moreover, stude	nts get the	
	basic principles of reinforcement learning and natural language processing.			
		KZ	4	
BI-MMP	Multimedia team project	rz	4	
	This course is presented in Czech.			
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5	
	sed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa	· · ·		
includes both PC s	side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE	a devices, Linux an	u windows	
	drivers, simple application development, and APIs of selected devices.			
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5	
	5			
-	urse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augm			
nign resolution disp	slays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentione	a tecnnologies, na	mely fractal	
	and procedural visualization, scientific data visualization, and 3D model scanning.			
		·		

BI-OOP.21	Object-Oriented Programming	Z,ZK	5
	rogramming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate together		-
course students ge	t acquainted with the main principles of object-oriented programming and design, used in modern programming languages. The emph for developing software, which includes testing, error handing, refactoring, and application of design pattern.	asis is on practical	techniques
BI-OPT	Introduction to Optical Networks	Z,ZK	4
	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss	· · ·	
of optical network	technology and on their solutions. The course will include the history of optical communications, an overview of passive components	s (optical fibres, mu	Iltiplexors,
dispersion compen	sators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission syster	ns). The course wil	l also cover
	e topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as		
ultrastable freque	ncy transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.	Students will solve	real tasks
	from practice.		
BI-ORL	Operations Research and Linear Programming	KZ K	5
-	o introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundar nal research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (suc	-

BI-SP2.21	Team Software Project 2	KZ	5
Students gain han	ds-on experience with the iterative development process while working on a large-scale software project. The first iteration is the result	of the BIE-SP1 cou	urse project.
However, in this follow-up, the functionality, testing, and documentation of the software system being developed will be emphasized. Students will work in teams of 4-6 people. The			
	her, in the role of the team and project leader, regularly consults with the team (at the seminars) the formal as well as material aspects		_
BI-SPS.21	Administration of Computer Networks and Services	Z,ZK	5
	Irse is to deepen the theoretical knowledge of network technologies and protocols in the environment of network servers administrate s. The course syllabus requires the knowledge at the level of courses BIE-PSI, BIE-VPS, and BIE-OSY. Practical skills will be gained by	-	
	with real network infrastructure.	practical nands-on	experience
BI-SQL.1	Language SQL, advanced	KZ	4
	n knowledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In pa	1	-
triggers, recursive	queries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point of	of view of specialize	ed database
	lexes, clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan ar	•	-
will be discusse	ed. Lectures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Oracle DBMS.	acle DBMS and par	rtially on
BI-SRC.21	PostgreSQL. Real-time systems	Z,ZK	5
	he basic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issues		-
	perimentally verified in computer labs. The course is mainly focused on embedded RT systems, therefore the design kits in the lab ar		-
	course.		
BI-ST1	Network Technology 1	Z	3
The subject is o	riented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredite	d under the Cisco I	Netacad -
	CCNA1 - R&S Introduction to Networks.	-	^
BI-ST2	Network Technology 2	Z	3
DI OTO	This course is presented in Czech.	7	3
BI-ST3 Students will furthe	Network Technology 3 er enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented during B		-
	ded in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, pred		
	simple topology, security, etc.		
BI-ST4	Network Technology 4	Z	3
Students will furth	er enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switching	presented during I	BI-ST1 and
-	ot further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased effici		
	e topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a completely le Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and switch		
	mergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation of the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation of the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation of the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation of the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation of the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation of the security aspect is the security	-	
	network running.		
BI-STO	Storage and Filesystems	Z,ZK	4
The student will lea	arn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, and arch	iving, as so as stor	age scaling,
	load balancing and high availability.		
BI-SVZ.21	Machine vision and image processing	Z,ZK	5
-	are becoming a common part of life by being universally available. Related to this phenomenon is the need to process and evaluate in s to different types of camera systems and a variety of methods for image and video processing. The course is focused on practical use	-	
	problems of practice that the graduates may encounter.	or camera system	S IOI SOIVING
BI-SWI.21	Software Engineering	Z,ZK	5
	ainted with methods of analysis and design of larger software projects that are typically designed and implemented in teams. They co		
	uring the analysis and design of larger software systems that will be developed in the concurrent course BIE-SP1. Students get hands-		
-	anguage UML for modeling and solving software problems. Students learn the basics of object-oriented analysis, architecture design a	-	the course,
	udents also gain a theoretical basis in the field of project management, estimation of costs of software projects, and methods of their		-
BI-TAB.21	Applications of Security in Technology	Z,ZK	5
The goal of the co	purse is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Stude cybersecurity applications and extend their knowledge from the cryptology, the secure code, and system, network, and hardware	-	
BI-TDA	Test driven architecture	KZ	4

	purse has a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occu		-
BI-TDP.21	Documentation and Presentation	KZ	3
	sed on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically fi		
	t of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically prese		
the teacher. The	course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14 exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.	days of teaching.	within the
BI-TEX	TeX and Typography	Z,ZK	4
	sented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of the		-
	rules.		
BI-TIS.21	Information Systems	Z,ZK	5
-	burse is to familiarise students with the information systems topic and information systems implementation principles. During the cour		
	xisting types of systems and their usage in specific industry segments. Students are familiarised with the CRM, ERP, MRP and other		-
	tal part of the course is the introduction to key ideas of an information system selection, evaluation of information system benefits, wand information system information based on the project management principles. The emphasis is on the initial customer analysis,		
	s better to implement any existing information system or to develop a new one from scratch. These factors determine the information system	-	
	of the course information systems security, operation, support, maintenance, legislation impacts, and government information system	-	
BI-TJV.21	Java Technology	Z,ZK	5
The goal is to prov	ide knowledge and skills for developing information systems and applications through concepts used in software development and exp	erience with librari	es and tools
	from Java language ecosystem. At the course end, the students are able to develop software systems in Java platform.		

BI-TPS.21 Computer Networks Technologies	Z,ZK	5			
The course introduces students with basic and advanced technologies, components, and interfaces of contemporary computer networks at the physic	1 1				
link layer. The lectures provide theoretical foundations of these technologies and explain relevant physical principles. In the labs, the respective technologies	-				
with the most important ones students will get hands-on experience. Thematically, the course covers both local and long-range optical networks, Ethernet, modern wireless networks,					
always with focus on high-speed networks.					
BI-TS1 Theoretical Seminar I	Z	4			
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic	al reading group. Th	ne students			
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a	work with scientific	papers and			
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	. <u> </u>				
BI-TS2 Theoretical Seminar II	Z	4			
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic	al reading group. Th	ne students			
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a	work with scientific	papers and			
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	r				
BI-TS3 Theoretical Seminar III	Z	4			
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic					
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a	work with scientific	papers and			
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	· <u> </u>				
BI-TS4 Theoretical Seminar IV	Z	4			
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic					
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a	work with scientific	papers and			
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.					
BI-TUR.21 User Interface Design	Z,ZK	5			
Students gain a basic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where softw					
communicate with the user optimally, since the needs and characteristics of users are not taken into account during product development. Students ga	n an overview of me	ethods that			
bring users into the development process to ensure optimal interface for them.	774				
BI-TWA.21 Design of Web Applications	Z,ZK	5			
The basic course of web application development. Initially, the students become familiar with HTTP and its possibilities and partly with some properties		-			
structure (HTML) and presentation of document on the Web (CSS). These skills provide the necessary basis for the development of Web applications, modern libraries facilitate the development of Web pages applications. Server side will be demonstrated on PHP technology using frameworks Symfon					
on the client side will be demonstrated using a JavaScript language with library jQuery and possibly MV* framework Read	-	elopinento			
BI-TZP.21 Technological Fundamentals of Computers	Z,ZK	5			
Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computers		-			
level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to redu					
limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a con					
(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.	iputor portor ouppi				
BI-UKB.21 Introduction to Cybersecurity	Z,ZK	5			
The goal of the course is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic over		-			
and attacker techniques, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace re		,			
BI-ULI Introduction to Linux	Z	2			
Students become familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become	. – .				
and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (te					
BI-UOS.21 Unix-like Operating Systems	KZ	5			
Unix-like operating systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fu					
systems for computers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic proper					
processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level	of advanced users v	vho are not			
only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting ir	terface, called shell				
BI-VAK.21 Selected Applications of Combinatorics	Z	3			
The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the	asic courses, we ap	proach the			
issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic	c data structures. Fι	urthermore,			
with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) info	ormatics. Areas from	n which we			
will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimiz	ation and more. Stu	idents will			
also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.					
BI-VDC.21 Virtualization and Data Centers	Z,ZK	5			
The aim of the course is to familiarize students with technology basis of cloud computer systems. It shows principles and techniques used in design and	implementation of	data center			
infrastructure, such as various kinds of virtualization and high availability of servers, storages, and software layers. The course guides through data ce	-				
to public and hybrid clouds. Student learn current trends in the architecture of IT infrastructure and its configuration for classic and cloud applications.					
design, validation, and operation of complex infrastructures for modern applications with respect to scalability and protection against overloads, c					
BI-VES.21 Embedded Systems	Z,ZK	5			
Students learn to design embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and embedded	led processors, thei	r integrated			
peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.					
BI-VHS Virtual game worlds	ZK	4			
The course leads students to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current students to create a complex virtual world.	-				
complemented by the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. T		bliowed by			
the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR devi					
BI-VIZ.21 Data Visualization	KZ	5			
The course offers an overview of the types and characteristics of data as well as suitable visualization methods. This will aid the students in understand	-				
application in areas such as data mining and machine learning. Within the course, students will be introduced to exploratory data analysis, preproces		<u> </u>			
different kinds of data such as text, social networks, time series or basic image data processing. Students will get hands-on experience in applications of	selected methods to	real-world			
examples in the Python programming language.					

BI-VMM	Selected Mathematical Methods	Z,ZK	4
-	s with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then ad		
	er, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the we the linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting the structure of the str		/e examine
BI-VPS.21	Selected Topics in Computer Networking	Z.ZK	5
	upon the Computer Networks course (BI-PSI), obligatory for the program. Students will learn in detail principles, protocols, and technology	. ,	
	al area networks up to Internet, with focus on switching, routing, security, and virtualization. The emphasis will be on gaining practica	•	
	vices in the lab and learning important methods of local area and wide area networks from the viewpoint of functionality, performance	-	
BI-VR1	Virtual reality I	KZ	4
Introduction to Virt	ual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of	virtual worlds com	munication.
The course focus	ses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves con	nputational thinking	g, empathy
	and shared social activities.		
BI-VR2	Virtual reality II	KZ	3
Continuation of the	e course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The obje for computer science and gamification in various social metaverse and desktop engines.	ctive is to develop a	applications
BI-VWM.21	Searching the Web and Multimedia Databases	Z,ZK	5
	ic overview about search techniques in the web environment that is interpreted as a very large distributed and heterogeneous storag	1 · · ·	
-	information about search techniques in text and hypertext documents (the web pages themselves) and about feature extraction from		
knowledge of simila	arity search in multimedia databases (generally in collections of unstructured data). They also learn techniques for programming web se	arch engines for the	e mentioned
	data types (documents).		
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4
	led system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of the		
	robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion cont	-	
	avigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get p technologies.		
BI-ZNF	PHP Framework Nette - basics	KZ	3
	the basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech po	1 1	
	knowledge should serve for the efficient creation of a web backend in PHP language.		Ŭ
BI-ZPI	Process engineering	KZ	4
Students will learn	fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of p	rocess modelling a	and they will
learn basics of the	used notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of bus	iness processes us	sing modern
CASE tools. The re	ole of process engineering for information systems development is discussed as well as its importance in the overall context of inform	ation and business	strategy of
DI 700.04	an enterprise.	7 71	
BI-ZRS.21	Basics of System Control	Z,ZK	5
-	an introduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will focu ering and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, description	-	-
-	ic systems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of creat		
	linear dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also giver		-
control loops, issu	ies of stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industrial	implementation of	continuous
	and digital controllers and PLC control.

	an of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content.		
	y courses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits cor		
employment with a	foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided int	o two subjects if th	e internship
	exceeds the academic year's dead-line.		
BI-ZSB.21	Basics of System Security	Z,ZK	5
-	ourse is to provide introduction to basic concepts in security of computer systems. Further, the course introduces the basics of forens	-	
such as malware	analysis or incident response. After finishing the course student will get both theoretical and practical knowledge in the area of model as well as skills needed for independent work in the area of operating system security incident analysis.	n operating system	hs security,
BI-ZUM.21	Artificial Intelligence Fundamentals	Z,ZK	5
	troduction to artificial intelligence with emphasis on symbolic techniques. The design of an intelligent agent and the techniques neede	1 1	
	decision-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but also l		
as a virtual assistant or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art during the course.			
BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4
	This course is presented in Czech.		·
BIE-CSI	Introduction to Computer Science	Z	2
	tory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fi		
-	ool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The g		
and relate basic p	principles of computer science for students to understand, early on, what computer science is, why things such as high-level program	ning languages an	a tools are

done the way they are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer not just basic computer science questions but also questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interested in computer science more

	than expected, or even less than before.				
BIE-DIF	Differential equations	Z,ZK	5		
This course provide	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential su	olution methods like	e separation		
	of variables. Key theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered with methods like characteristic				
polynomial analysis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world applications. Finally, an introduction to					
partial differential	equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs	and PDEs, includi	ing implicit		
	and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.	-	4		
BIE-EEC	English language external certificate		4		
The BIE-ECC cours	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli the B2 level of the Common European Framework of Reference for Languages.	sn comparable to o	or exceeding		
BIE-IMA2	Introduction to Mathematics 2	Z	2		
	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a	1 1	1		
Students reliesinal	examples.		in particular		
BIE-SEG	Systems Engineering	Z	0		
	ory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles of the class is to principle basic		-		
	essor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After taking				
understand the	difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what con	ncurrency is, as op	posed to		
	parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.				
BIE-ZUM	Artificial Intelligence Fundamentals	Z,ZK	4		
	uced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic				
space search, multi	i-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithm	is and the neural ne	etworks, will		
	be presented as well.	_			
FI-TOP	Academic writing	Z	2		
•	portant and required part of research activity. It is not only about obtaining research results but also about applying them in the form of a second state of the seco		0		
	e useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the cou icle, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting an	,			
	course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester. Da		-

NI-PDD	Data Preprocessing	Z,ZK	5			
Students learn to p	repare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s	ources, such as im	ages, texts,			
time series, etc., and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteristics from images or from web						
	pages.					
NI-PSD	Public Services Design	KZ	4			
	oduce students to specifics of UX, Service design and development for public sector. We will look into the design and development p		•			
suppliers (devs a	ind designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration	n with client represe	entatives.			
	Course is aimed at students-designers as well as clients.	r				
NI-PSL	Programming in Scala	Z,ZK	4			
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature		-			
advance standard l	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	l libraries e.g. Play, (Cassandra,			
	Scalaz, etc.					
NI-REV	Reverse Engineering	Z,ZK	5			
	equainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before					
	will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated and how they interact with 3rd party libraries.					
	tten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be de					
debuggers and de	ebugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer	malware scene. Th	ie focus of			
	the course is on the seminars, where students will solve practically oriented tasks from the real world.		_			
NI-SYP	Parsing and Compilers	Z,ZK	5			
The module builds	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	rious variants and a	applications			
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.					
NI-TSP	Testing and Reliability	Z,ZK	5			
-	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre					
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equip	ment. They			
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.					
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5			
-	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	-				
	rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie					
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect		-			
management of col	mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in and development tools (Continuous integration and development).	the use of modern	integration			
		7 71/	4			
NI-VYC	Computability	Z,ZK	4			
	Classical theory of recursive functions and effective computability.	_
