G63C2301	Controlling	Z,ZK	6
Controlling methods	are presented from the initial detection of deviations to advanced models of managerial decision support in strategic horizons in	h the context and	against the
Ū	anagement of basic business processes with an emphasis on the processes determining the effect of added value in the company		0
phases of managem	plained according to the time perspective in the scope of corporate strategies and operational management, including the role ent from analysis to reporting. The content of the course is also focused on the presentation of methods and management tools ts (entities) in mutual interaction, especially in the area of cost management. Examples of models and case studies and tasks are	that can be used	to manage
of controlling in the c	ompany.		
G63C2302	Financial Law	ZK	3
G63C2201	Microeconomic Theory	ZK	3
The course introduce	es the analysis of the theory of consumer, the theory of firm, and the market interactions of consumers and firms.		
G00C3101	Diploma Thesis Project	Z	0
G16C2501	HR Management Systems	Z,ZK	6
	d on the development of managerial skills in managing people in the organization. Through lectures and seminars, students will cient people management in the organization and the main tasks of managers in various activities of people management in the		rategies, policies

ΖK G77C0001 Technology Assessment 3 **Communication Systems and Networks** ΖK G77C0007 3 Telecommunications: What does it all mean? We look into history and the future. We'll try it wired and wireless, even at the speed of light (or almost...), on land, underwater, and in space. For example: How is electric current created? Painter Morse. Alexander, ring the bell! Telecommunications from the plane. Do you know a Twisted Pair? How a landline works. How the telephone network becomes the Internet. Light and dark. Transmission of information by light. Why are networks "mobile"? 1G, 2G, 3G, 4G, 5G, etc. The more G, the better. How here and how elsewhere? Satellite systems (J. Kepler + A. C. Clarke = E. Musk). What do Saturn and Earth have in common? Does navigation know about me? We will walk around akovice. How television (including Internet) works. A football match and a drastic Clash of the Titans. WiFi not working? What now Why the Internet is not for people but for things. The biggest mistakes in the history of telco business. The subject scrupulously avoids formulas and mathematical relationships (however, it does not always succeed...) - the keywords are principles and clarity. 4 127LAHE Landscape Heritage ΖK Cultural, historical, natural, and ecological processes traditionally shape the human environment, our shared cultural landscape heritage. The course will reveal intrinsic values, functions, and character, and the appropriate conservation techniques and strategies for urban landscape heritage protection. G16E0103 Management in the Automotive Industry Z,ZK 6 G16C1302 Z,ZK 6 G77C0003 Transportation Engineering Projects ΖK 3 G77C2011 Industry 4.0 Z.ZK 3 I. Annotation The subject "Industry 4.0" deals with the topic of the fourth industrial revolution, explains concepts, terms and trends in this area. It deals with the history of industrial revolutions, current trends as well as individual technological breakthroughs that are typical for Industry 4.0. It analyzes the effects of "Industry 4.0" on the economy and society as a whole. Last but not least, it deals with the role of the state in the creation of economic and industrial policy, the need for which is generated by "Industry 4.0" G51C0401 Ζ 3 G77C0008 Z,ZK 6 Robotics G16C0601 Technology Forecasting Z,ZK 3 G77C0004 Smart Cities Technologies 3 ZK The subject Technology for Smart Cities introduces students to the interdisciplinary problematics of smart cities and places it in the context of the technological, social and economic development of society. Urban and Landscape Design 127UKKO ΖK 3 The course introduces selected chapters from urban and landscape composition and the theory of urbanism as a basis for urban and landscape design (city image, city environment, perception, landscape composition, composed landscape, cultural landmarks, the phenomenon of the garden in the historical context, etc.). The aim of the course is a comprehensive view of urban and landscape design as a creation of the environment. A theoretical basis and a sound analysis of existing towns and landscapes are subsequently a prerequisite for successful practical design. This extends the content of the basic urban planning courses from the Bachelor's degree. Theoretical issues are complemented by examples from history and examples of various urban analyses. It focuses mainly on the development of the urban form of Prague, its selected districts (Dejvice, Karlín), aspects of their planning (regulatory commissions) and some specific issues (high-rise buildings). The basic set of lectures is complemented by several extension topics by invited external speakers. 127USRM Urban Structures and Urban Development 5 ZK The course deals with the characteristic features of the city structure of the Czech Republic, individual types of human settlements, their importance in the structure and their urban structure and form. Students will learn to identify the characteristic features of cities and villages, their urban uniqueness, arrangement of spatial structure, functional composition and operational relationships. Analyze their external and internal image. To identify their landscape, urban and architectural values. Attention is also paid to the forms of urban development, i.e. both their overall growth and the regeneration or transformation of their existing parts. It also deals with the structure and composition of public areas of cities and landscapes, their transformations, and the protection of historical, cultural and urban values. G77C0009 Information Security Management and Implementation ΖK 3

G16C1302		Z,ZK	6
G63E4301	Advanced Topics in Financial Management	Z	3
During the course wi	I be studied the strategies for recognizing the financial performance of firms. The market information drawn from the transactions	performed at the	inancial markets
will be combined wit	n the internal corporative sources. Several approaches and indicators will be applied to assess the evolution of companies. The	course aims at ov	erhaul the path
research of the portf	olio theory and recognize the main financial models intended to manage the assets. The exercises and theoretical perspective	deal with a diversi	ty of strategies
developed for assign	ing a portfolio of investment, combining assets of different degree of risk, underpining the position with the diversification princi	ple. The overview	starts with the
pioneering Markowit	z contribution; the course analyzes also the Merton Miller model of irrelevance of the equity-debt composition for the corporative	e structure of capi	tal. The analysis
includes also the Sh	arpe CAPM model. But previously, the student must be aware of all statistical concepts dealing with uncertainty, probability dist	ributions, confider	ce intervals and
	With the conducing background the course enters in the definition of VaR applications, in order to quantify the amounts of loses b	ased on the proba	bility distribution
based on the Gauss	an statistical theory. The estimation of measures of risk conveyed by each individual asset is run by econometric methods.		
G16E0201	Agile BootCamp	KZ	3
Agile Bootcamp cou	se teaches students the fundamentals of Design Thinking and other agile innovation principles. The course introduces three met	hods that work we	Il together within
the same cross-func	tional team: Design Thinking, Lean Startup and Agile across teams. In the main part, it will offer the right tools and techniques f	or the design and	implementation
of Design Sprints, in	cluding a practical test of the entire process. Teaching mode: completely online or hybrid, at a specific time/week during the sen	nester.

G16E0202	Project Technology Management	Z,ZK	6		
Technology project management means not only decisions about one's own technological research, innovative cooperation, or technology transfer. Technological innovations, especial					
in production, have long tied up company resources, and poor decisions can pose significant financial problems for most companies. Therefore, it is necessary to examine the preparator					
implementation, and co	mplementation, and commercial activities of technology management in a more comprehensive form. Technology project management is more goal-oriented, time-bound, and has				
project organizational s	project organizational structure and budget. After completing the course, students should answer the following framework topics: define the nature, importance, and key functions of				
project technology man	project technology management with a focus on the analysis of technological trends, risks, and opportunities, innovation radar, and technology assessment. Explain the relationships				
of business manageme	of business management to the development of the product, production, and service technologies. Characterize the process of technological forecasts, foresight, and creation of the				
technology strategy of t	he company. Explain creating a project plan for implementing new technology. Clarify the importance of the necessary protect	tion of technolog	ical intellectual		
property and the need t	o commercialize their own technologies at the level of industry, region, or state.

The choice to internationalize; the various entry modes; impact of international activity on the business plan; the export plan; the marketing plan; the implementation; relations with					
partners; follow up and the results.					
G65C0201	Territorial Management Planning	ZK	3		

List of courses of this pass:

Code	Name of the course	Completion	Credits
127CP11	City Planning 11	ZK	2
Concepts in urba	an space design in history, form of the city, typology of urban space, philosophies behind, practices of urban space design in Europea	n cultural context,	land-use,
	planning controle, preservation of cities, urban ecology, trends and policies in urban planning and regional development.		
127LAHE	Landscape Heritage	ZK	4
Cultural, historical,	natural, and ecological processes traditionally shape the human environment, our shared cultural landscape heritage. The course will re-	eveal intrinsic value	s, functions,
	and character, and the appropriate conservation techniques and strategies for urban landscape heritage protection.		
127UKKO	Urban and Landscape Design	ZK	3
	ices selected chapters from urban and landscape composition and the theory of urbanism as a basis for urban and landscape design		
	ape composition, composed landscape, cultural landmarks, the phenomenon of the garden in the historical context, etc.). The aim of the second se		
	landscape design as a creation of the environment. A theoretical basis and a sound analysis of existing towns and landscapes are su		•
•	al design. This extends the content of the basic urban planning courses from the Bachelor's degree. Theoretical issues are compleme		
•	arious urban analyses. It focuses mainly on the development of the urban form of Prague, its selected districts (Dejvice, Karlín), aspec		
	sions) and some specific issues (high-rise buildings). The basic set of lectures is complemented by several extension topics by invited		
127USRM	Urban Structures and Urban Development	ZK	5
	with the characteristic features of the city structure of the Czech Republic, individual types of human settlements, their importance in		
	. Students will learn to identify the characteristic features of cities and villages, their urban uniqueness, arrangement of spatial structu	•	
	nships. Analyze their external and internal image. To identify their landscape, urban and architectural values. Attention is also paid to th Il growth and the regeneration or transformation of their existing parts. It also deals with the structure and composition of public areas		
	transformations, and the protection of historical, cultural and urban values.		capes, men

G66C0101	Reflections of Technical Innovations in Culture	ZK	3
The subject is inte	nded for students of the Master's study program Project Management of Innovations. The teaching is aimed at gaining a wide range	of knowledge from	the field of
innovation	processes, for the understanding and internalization of which a deep understanding of the connections between science and culture	e is an absolutely k	ey.
G77C0001	Technology Assessment	ZK	3
G77C0003	Transportation Engineering Projects	ZK	3
G77C0004	Smart Cities Technologies	ZK	3
The subject Technol	plogy for Smart Cities introduces students to the interdisciplinary problematics of smart cities and places it in the context of the techn	ological, social and	d economic
	development of society.		
G77C0007	Communication Systems and Networks	ZK	3
Telecommunication	ons: What does it all mean? We look into history and the future. We'll try it wired and wireless, even at the speed of light (or almost)	, on land, underwa	ter, and in
space. For example	e: How is electric current created? Painter Morse. Alexander, ring the bell! Telecommunications from the plane. Do you know a Twiste	d Pair? How a land	lline works.
How the telephone	e network becomes the Internet. Light and dark. Transmission of information by light. Why are networks "mobile"? 1G, 2G, 3G, 4G, 50	3, etc. The more G,	, the better
How here and ho	w elsewhere? Satellite systems (J. Kepler + A. C. Clarke = E. Musk). What do Saturn and Earth have in common? Does navigation k	now about me? We	e will walk
around akovice.	How television (including Internet) works. A football match and a drastic Clash of the Titans. WiFi not working? What now Why the In	ternet is not for peo	ople but for
things. The bigges	t mistakes in the history of telco business. The subject scrupulously avoids formulas and mathematical relationships (however, it doe	s not always succe	ed) - the
	keywords are principles and clarity.		
G77C0008	Robotics	Z,ZK	6
G77C0009	Information Security Management and Implementation	ZK	3
G77C2011	Industry 4.0	Z,ZK	3
I. Annotation The	subject "Industry 4.0" deals with the topic of the fourth industrial revolution, explains concepts, terms and trends in this area. It deals	with the history of	industrial
revolutions curren	t trends as well as individual technological breaktbroughs that are typical for Industry 4.0. It analyzes the effects of "Industry 4.0" on t	the economy and s	ociety as a

revolutions, current trends as well as individual technological breakthroughs that are typical for Industry 4.0. It analyzes the effects of "Industry 4.0" on the economy and society as a whole. Last but not least, it deals with the role of the state in the creation of economic and industrial policy, the need for which is generated by "Industry 4.0".
