

Study plan

Name of study plan: Geodézie a kartografie, specializace Inženýrská geodézie

Faculty/Institute/Others:

Department:

Branch of study guaranteed by the department: Welcome page

Garantor of the study branch:

Program of study: Geodesy and Cartography

Type of study: Follow-up master full-time

Required credits: 120

Elective courses credits: 0

Sum of credits in the plan: 120

Note on the plan: přechod na nový studijní plán, platí pro nástup 2022

Name of the block: Compulsory courses

Minimal number of credits of the block: 90

The role of the block: Z

Code of the group: NG20180001

Name of the group: Geodézie a kartografie, spec. Inženýrská geodézie, 1. semestr

Requirement credits in the group: In this group you have to gain at least 30 credits

Requirement courses in the group: In this group you have to complete at least 8 courses

Credits in the group: 30

Note on the group:

Characteristics of the courses of this group of Study Plan: Code=NG20180001 Name=Geodézie a kartografie, spec. Inženýrská geodézie, 1. semestr

101MM4G	Mathematics 4G https://mat.fsv.cvut.cz/bobok/	Z,ZK	4
124UPST	Introduction to Civil Engineering Basic classification of building structures, basics of building structures - construction elements, construction systems, construction technology, construction process. Technical documentation - levels of technical documentation, principles of technical documentation. Foundation structures of buildings - construction trenches, surface foundations, deep foundations. Substructure - construction, expansion, waterproofing. Load-bearing structures of buildings - vertical and horizontal load-bearing structures, roof structures - building technical solutions. Overhanging structures, stairs and ramps - structural and material solutions. Completion construction - types, technology, construction technical solutions.	ZK	2
154ACIG	AutoCAD for Engineering Surveying Basics of AutoCAD - working with files, file types, compatibility, user interface, control, drawing, grips, tracing, levels, measurements, dimensions, blocks, tables, external references, working with rasters, auxiliary commands.	KZ	2
154ING2	Engineering Surveying 2 Planning and evaluating of precision of the geodetic activities, evaluation of precision of measurement and setting-out of distances, angles and verticals including sources of errors. Geodetic setting-out networks positional, altimetric and spatial (derivation of precision), evaluation of precision of positional and altimetric setting-out of elementary parts of a building structure, derivation of main elements of transition curve including solution of circular arcs with transition curves, evaluation of precision and provableness of building structures shifts and deformations.	Z,ZK	5

155DPRZ	Remote Sensing	Z,ZK	5
The subject is focused on explanation of physical bases allowing to use remote sensing, on technical explanation of methods of data collection/measurement, on behavior of individual materials/land covers as an interaction with electromagnetic radiation, and on possibility to use RS for many applications.			
155GPL	Survey Sketches	KZ	2
Students will learn about the preparation of geometric plans through practical exercises. It is mainly about the orientation of changes for updating the cadastral register by various measuring technologies and the subsequent processing of geometric plans as a technical basis for the introduction of these changes into the cadastral register in locations with different technical conditions - analogue cadastral map, digital cadastral map (DKM, KMD, etc.)			
155KAT3	Cartography 3	Z,ZK	5
Advanced cartography, web map services and applications, dynamic maps, spatial data formats, data sources, standardization, web maps, trends in cartography.			
155TGD3	Theoretical geodesy 3	Z,ZK	5
Vector and scalar description of gravitational field of the Earth. Properties of gravitational potential and its derivatives for basic bodies. Description of gravity field of the Earth. Normal gravity field of normal bodies. Approximation of the shape of the Earth in form of geoid or level ellipsoid. Stokes' and Molodensky's solution of the shape of the Earth. Consequences of this procedures for geodesy (geoid, quasigeoid, heights). Construction and models of (quasi)geoid. Physical principles of gravity surveying.

Characteristics of the courses of this group of Study Plan: Code=NG20180002 Name=Geodézie a kartografie, spec. Inženýrská geodézie, 2. semestr

136UDST	Introduction to Transportation Facilities Engineering	ZK	2
The subject is designed as a course containing basic knowledge of transport construction. The lectures are divided into two parts, road (9 lectures) and railway (4 lectures). In the road part, students will learn about the Road Act and related legislative and technical regulations, their impact on road design. Design categories of roads and highways, design speed, alignment and elevation, road and highway layout in cross section, earthwork - dimensions, shapes, drainage. Urban roads, division and designation, definition of MK space, differences in design, operation and equipment. Pavement, division, design principles. Safety equipment, junctions and crossings. In the lectures devoted to rail transport, basic terminology from the field of rail transport, design parameters of the track, basic shapes of the earth body, composition of the railway top and bottom, including the Act on Railways, will be presented. Furthermore, the basic design parameters of urban rail transport - trams and subways, history, principles and principles of tram line and subway construction will be presented. The interaction of rail transport with the environment will be mentioned. The final lecture will be devoted to railway geodesy, geodetic foundations for ensuring the spatial location of the track.			
154ING3	Engineering Surveying 3	Z,ZK	5
Legislative regulations for geodetic activities in the capital construction, technical standards, geodetic ground for designing, geodetic activities in the building structures, transportation engineering, water resource management, industry and energetics (specificities of setting-out, check of geometrical parameters of structures, rectification of technological equipment etc.).			
154SPG	Land Surveying in Civil Engineering and Industry	Z,ZK	5
Subject 154SPG belongs to the group of engineering geodesy subjects. It builds on previous studies. It is devoted to the issue of surveying work in some specific areas of documentation and preparation of reconstruction of historic and other construction, transport, water management and industrial objects.			
154VYIG	Engineering Surveying Fieldwork Training (2 weeks)	KZ	2
Measurement and calculation of the geodetic micronetwork for industry purposes, precise height measurements, method of the temporary station, calculation of the setting out data, setting out of the construction with check measurement, setting out of the road with arcs and transition curves, measurement and processing of the cross sections and longitudinal profile. Measurement and calculation of the 3D network with use of the electronic tachymeter.			
155FTG2	Photogrammetry 2	Z,ZK	5
Aerial photogrammetry. Relative and absolute orientation of aerial photos. Analogue, analytic and digital interpreting devices, computer support. Photogrammetric methods in mapping. Orthophoto, its accuracy. Photo triangulation, AAT, block and bundle adjustments, analytical photogrammetry. Digital photogrammetry, digital orthophoto, digital photogrammetric stations, optical correlation systems, aerial laser scanning, using of drones (RPAS).			
155PKAR	Project - Cartography	KZ	5
Map creation in GIS, geodatabase, data model, symbology, compositional elements of maps, geographical nomenclature, errors in maps.			

155TG4	Theoretical geodesy 4 Theoretical Geodesy 4 introduces students to the field of space geodesy, i.e. using satellite observations of the Earth to define and maintain global coordinate systems, the Earth orientation parameters, models of the Earth's gravity field and ocean topography. The outputs of space geodesy form the basis from which one of the most widely used measurement techniques in geodesy GNSS is based.	Z,ZK	5
155VTTG	Fieldwork Training in Theoretical Geodesy Landsurveying in terrain is intended for the practice of measurement methods of geodesy and data processing work in the creation of a point field. Includes tasks: Long Range Triangulation and Trilateration (TRG) Determining the course of the quasi-geoid (GEO) Remeasurement and adjustment of height points with very precise leveling (VPN) Azimuth determination using the gyrotheodolite, gravimetric measurements	KZ	1

Characteristics of the courses of this group of Study Plan: Code=NG20230003 Name=Geodézie a kartografie, spec. Inženýrská geodézie, 3. semestr

154BIMG	BIM in Surveying Basic information about BIM and the link to geodetic measurements. Ways of obtaining and processing geodetic data for the BIM model. Measurement methods in relation to LOG and LOD. Creation of a simple BIM model.	Z,ZK	2
154EZKA	Economy in Land Surveying and Cadastre of Real Estates The subject summarizes general economic terms with a specialization in the field of geodesy and cartography.	Z,ZK	3
154ING4	Engineering Surveying 4 The subject deals with the topic of mining surveying in Czechia.	Z,ZK	5
154KOME	Control Measurement Accuracy of geometric parameters in construction, control measurement of construction objects, accuracy of geodetic methods in control measurement and determination of displacements of construction and natural objects, determination of stability of reference points. Interpretation of displacement measurement results and relevance for monitoring geometric and physical properties and for diagnostics of structures and natural objects. Links to other non-geodetic monitoring methods.	KZ	2
154LSK	Laser Scanning Principles and theory of laser scanning systems (LSS), main types of LSS, influences impact on the accuracy of measuring, general sequence of point cloud processing, information about the most important LSS, practical applications in civil engineering and related branches, economical advantages, work safety.	KZ	2
154MC3D	Microstation 3D Drawing in the system Bentley Microstation, creation, editing and visualisation of objects. A subject is concluded by a project, and it is a base for the classification of students.	KZ	2
154MEGE	Metrology in Geodesy The basis of the course is metrological terminology and statistical tests used in geodesy. The course is focused on application of standard ISO 17123 Optics and optical instruments Field procedures for testing geodetic and surveying instruments. Participants get both practical and theoretical experience with testing of geodetic instruments. They perform measurements with total stations and levelling instruments in the field and they also use statistical methods for determining precision of the instruments.	KZ	2
155MSPD	Modern Methods of Spatial Data Acquisition The course focuses on new modern and unconventional methods of geospatial data collection and presentation. Contains information on terrestrial, aerial and mobile laser scanning, about remote sensing and its methods, about hyperspectral imaging. Further, it focuses on the progressive method in geomathics - on RPAS. It informs about types, usage, legislation as well as about sensors and software for automatically processing for image data. Finally, geophysical methods and virtual reality technologies are presented.	Z,ZK	5

155PKAZ	Law in Cadastre and Surveying	ZK	2
Public and private, substantive and procedural law. Overview of legal regulations governing the cadastre of real estate (CN) and land surveying. Predecessors of surveying and cadastral authorities in the past. Surveying and cadastral authorities today. Thing, thing in the legal sense, division of things, immovable things, part of a thing and accessories of a thing. Land, parcel of land, land in jurisprudence, building, building in jurisprudence, small buildings, temporary buildings, building, unit. Origin of the CN and its predecessors, the Cadastral Act and implementing regulations, definition and purpose of the CN. Content of the CN, cadastral register, registration of rights in the CN, basic provisions. Rights entered into the CN by deposit, title deed, proposal for deposit, annexes to the proposal, deposit procedure. Deposit procedure, record, note. Administration of the CN, entries of other data, acceptance of data, time limits for entry in the CN, deposit of documents in the collection of documents, revision of the CN, correction of errors, obligations of owners and other beneficiaries, municipalities and public authorities. Surveying activities and geometrical plans, publicity of the CN, provision of CN data, offences, common, transitional and final provisions of the Cadastral Act. Real estate contracts. Previous legislation on land surveying, Land Surveying Act, introductory provisions, surveying activities. Rights and obligations in carrying out surveying activities, verification of results of surveying activities, geodetic reference systems and state mapping works, offences. Visit to the land register in the building of the Surveying and Cadastral Authorities in Prague Kobylisy.			
155VFG	Photogrammetry -Project	KZ	5
practical metrical documentation of historical objects and sites, technology of documentation and data processing by modern methods			

Name of the block: Povinně volitelné předměty, doporučení S1

Minimal number of credits of the block: 30

The role of the block: S1

Code of the group: NG20180004
