## Study plan

## Name of study plan: Structural Analysis of Monuments and Historical Constructions

Faculty/Institute/Others: Department: Branch of study guaranteed by the department: Welcome page Garantor of the study branch: Program of study: Structural Analysis of Monuments and Historical Constructions Type of study: Follow-up master full-time Required credits: 60 Elective courses credits: 0 Sum of credits in the plan: 60 Note on the plan:

Name of the block: Compulsory courses Minimal number of credits of the block: 60 The role of the block: Z

### Code of the group: SAHC202401

Name of the group: Structural Analysis of Monuments and Historical Constructions Requirement credits in the group: In this group you have to gain at least 60 credits Requirement courses in the group: In this group you have to complete at least 8 courses Credits in the group: 60

#### Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
132SBSD	Seismic Behaviour and Structural Dynamics Petr Kabele Petr Kabele (Gar.)	ZK	5	3P+7C	Z	Z
132HCC	History of Construction and of Conservation Petr Kabele Petr Kabele (Gar.)	ZK	5	3P+7C	Z	Z
132IDIA	Inspection and Diagnosis of Historical Buildings Petr Kabele Petr Kabele (Gar.)	ZK	5	3P+7C	Z	Z
132RCM	Restoration and Conservation of Materials Petr Kabele Petr Kabele (Gar.)	ZK	5	3P+7C	Z	Z
132SAT	Structural Analysis Techniques Petr Kabele Petr Kabele (Gar.)	ZK	5	3P+7C	Z	Z
132RST	Repairing and Strengthening Techniques Petr Kabele Petr Kabele (Gar.)	ZK	5	3P+7C	Z	Z
132IPR	Integrated Project of Historical Buildings Petr Kabele Petr Kabele (Gar.)	ZK	9	12C	L	Z
132DISA	Masters Thesis Petr Kabele, Petr Fajman, Michal Hlobil <b>Petr Kabele</b> Petr Kabele (Gar.)	Z	21	2C	L	Z

# Characteristics of the courses of this group of Study Plan: Code=SAHC202401 Name=Structural Analysis of Monuments and Historical Constructions

Seismic Behaviour and Structural Dynamics 132SBSD ΖK 5 Introduction to earthquake engineering. Elements of seismology and seismicity. Elements of seismic hazard analysis. Dynamic analysis of single-degree-of-freedom systems. Dynamic analysis of multi-degree-of-freedom systems. Dynamic analysis of structures using the finite element method. Response spectrum analysis of linear multi-degree-of-freedom systems. Response history analysis of linear multi-degree-of-freedom systems. Non-linear dynamic and static analysis of structures. Earthquake-resistant design of buildings. Structural dynamics in building codes. Elements of soil dynamics. Damage and collapsing mechanisms in existing (particularly historical) structures. Introduction to innovative earthquake-resistant systems. 132HCC History of Construction and of Conservation 7K 5 Introduction to modern conservation criteria. General concepts. Structural conservation and restoration. Construction techniques and structural components: masonry and earth. Construction techniques and structural components: timber and mixed systems. Construction techniques and structural components: metals. The use of metals in historical construction. Introduction to 20th century heritage structures. Structural concrete across 20th century. Overall structural arrangements in history. Ancient rules and classical approaches. Limit analysis: the static and the kinematic approach. Damage and collapsing mechanisms in historical structures: gravity and soil settlements; construction defects. Damage and collapsing mechanisms in historical structures: environmental and anthropogenic actions. History of conservation. The Athens Charter and the Venice Charter. Modern structural restoration practice. The application of conservation criteria in practice. Diagnosis, safety evaluation and design of intervention. Examples. Discussion of analysis and restoration of real heritage structures. 132IDIA Inspection and Diagnosis of Historical Buildings ΖK 5 General methodology for inspection and diagnosis. Documentation of historic structures, typical damage and visual inspections. Soils and rocks in situ investigation and monitoring. In situ investigation of timber, steel and concrete structures. In situ NDT and MDT for masonry structures. Complementarily of NDT and MDT and case studies presentation. Laboratory load tests and in situ load tests. Monitoring of historic structures. Monitoring analysis and cyclic effects. Modal testing of historic structures. Structural assessment.

	ation and Opportunities of Materials	71/					
132RCM   Restor	ation and Conservation of Materials	ZK	5				
Introduction to conservation and restoration of materials. Historical materials: identification, types and classification. Binders and mortars. Degradation of historic materials: physical,							
chemical and biological actions. Degradation of historic materials: disasters and anthropogenic actions. Salts in stone and masonry. Cleaning of façades. Repair materials and techniques.							
Consolidation of degraded brick and masonries. Consolidation of degraded mortar and plaster and interaction with fixed artistic heritage. Protective and coating layers. Restoration and							
conservation of wood. Deterioration and conservation of metals. Deterioration and conservation of 20th century heritage concrete and modern materials. Technical excursion. Laboratory							
works and in-situ investigations.							
132SAT Structu	ıral Analysis Techniques	ZK	5				
Aims, chalenges and difficulties in the modeling and analysis of historical structures. Governing equations of the mechanics of continuum. The finite element method. Elasto-plastic							
constitutive models. Geometrical nonlinearity. Solution procedures for non-linear incremental FE analysis. Damage mechanics. smeared crack models. Applicability of continuum							
mechanics. Blocky limit analysis of masonry. Demonstration of modelling of real structures and examples.							
132RST   Repair	ing and Strengthening Techniques	ZK	5				
132RST   Repair Introduction to repair and strength	ing and Strengthening Techniques nening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s	ZK Structures. Strengt	5 thening of metal				
132RST   Repair Introduction to repair and strength structures. Design of timber struct	ing and Strengthening Techniques nening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Stre	ZK Structures. Strengt ngthening solutior	5 thening of metal ns.				
132RST     Repair       Introduction to repair and strength     structures. Design of timber struct       132IPR     Integra	ing and Strengthening Techniques nening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Strengthen	ZK structures. Strengt ngthening solutior ZK	5 thening of metal ns. 9				
132RST Repair   Introduction to repair and strength   structures. Design of timber struct   132IPR Integra   This unit is composed of three magnetic	ing and Strengthening Techniques nening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Streng ted Project of Historical Buildings ain parts, as follows: Field trips with presentations on case studies. Seminars on conservation subjects not address	ZK structures. Strengt ngthening solution ZK sed in the course.	5 thening of metal ns. 9 Analysis of case				
132RST Repair   Introduction to repair and strength   structures. Design of timber struct   132IPR Integra   This unit is composed of three mass   studies in groups of 3 to 5 studen	ing and Strengthening Techniques tening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Strength	ZK structures. Strengi ngthening solution ZK sed in the course. and maintenance	5 thening of metal ns. 9 Analysis of case plans of a case				
132RST Repair   Introduction to repair and strength   structures. Design of timber struct   132IPR Integra   This unit is composed of three mastudies in groups of 3 to 5 studen   study.	ing and Strengthening Techniques hening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Streng ted Project of Historical Buildings hin parts, as follows: Field trips with presentations on case studies. Seminars on conservation subjects not address ts. Within this unit, students have to develop the inspection, diagnosis, stability analysis, design project, monitoring	ZK structures. Strengt ngthening solution ZK sed in the course. and maintenance	5 thening of metal ns. 9 Analysis of case e plans of a case				
132RSTRepairIntroduction to repair and strengthstructures. Design of timber struct132IPRIntegraThis unit is composed of three mastudies in groups of 3 to 5 studenstudy.132DISAMaster	ing and Strengthening Techniques hening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Strength	ZK structures. Strengt ngthening solution ZK sed in the course. and maintenance Z	5 thening of metal ns. 9 Analysis of case plans of a case 21				
132RST   Repair     Introduction to repair and strength     structures. Design of timber struct     132IPR   Integra     This unit is composed of three mastudies in groups of 3 to 5 studen     study.     132DISA   Master     The Dissertation aims at developi	ing and Strengthening Techniques hening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Strength	ZK   structures. Strengt   ngthening solution   ZK   and maintenance   Z   structures. Studer	5 thening of metal hs. 9 Analysis of case plans of a case 21 ts may develop				
132RST Repair   Introduction to repair and strength   structures. Design of timber struct   132IPR Integra   This unit is composed of three mastudies in groups of 3 to 5 studen   study.   132DISA Master   The Dissertation aims at developi   research, compilation or case student	ing and Strengthening Techniques hening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete s tures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. Strength	ZK   structures. Strengt   ngthening solution   ZK   sed in the course.   and maintenance   Z   structures. Studer	5 thening of metal ns. 9 Analysis of case e plans of a case 21 tts may develop				

## List of courses of this pass:

Code	Name of the course	Completion	Credits				
132DISA	Masters Thesis	Z	21				
The Dissertation aims at developing research and/or professional competences in the field of conservation and restoration of architectural heritage structures. Students may develop							
	research, compilation or case study theses.						
132HCC	History of Construction and of Conservation	ZK	5				
Introduction to m	odern conservation criteria. General concepts. Structural conservation and restoration. Construction techniques and structural comp	onents: masonry a	nd earth.				
Construction techniques and structural components: timber and mixed systems. Construction techniques and structural components: metals. The use of metals in historical construction.							
Introduction to 2	0th century heritage structures. Structural concrete across 20th century. Overall structural arrangements in history. Ancient rules and	classical approact	nes. Limit				
analysis: the static	and the kinematic approach. Damage and collapsing mechanisms in historical structures: gravity and soil settlements; construction de	efects. Damage an	d collapsing				
mechanisms in h	istorical structures: environmental and anthropogenic actions. History of conservation. The Athens Charter and the Venice Charter. M	lodern structural re	estoration				
practice. The appli	practice. The application of conservation criteria in practice. Diagnosis, safety evaluation and design of intervention. Examples. Discussion of analysis and restoration of real heritage structures.						
132IDIA	Inspection and Diagnosis of Historical Buildings	ZK	5				
General methodology for inspection and diagnosis. Documentation of historic structures, typical damage and visual inspections. Soils and rocks in situ investigation and monitoring. In							
situ investigation o	f timber, steel and concrete structures. In situ NDT and MDT for masonry structures. Complementarily of NDT and MDT and case stu	udies presentation.	Laboratory				
load tests and in situ load tests. Monitoring of historic structures. Monitoring analysis and cyclic effects. Modal testing of historic structures. Structural assessment.							
132IPR	Integrated Project of Historical Buildings	ZK	9				
This unit is compose	ed of three main parts, as follows: Field trips with presentations on case studies. Seminars on conservation subjects not addressed i	n the course. Anal	ysis of case				
studies in groups o	f 3 to 5 students. Within this unit, students have to develop the inspection, diagnosis, stability analysis, design project, monitoring and	d maintenance plar	ns of a case				
	study.						
132RCM	Restoration and Conservation of Materials	ZK	5				
Introduction to conservation and restoration of materials. Historical materials: identification, types and classification. Binders and mortars. Degradation of historic materials: physical,							
chemical and biolog	jical actions. Degradation of historic materials: disasters and anthropogenic actions. Salts in stone and masonry. Cleaning of façades. Re	epair materials and	techniques.				
Consolidation of degraded brick and masonries. Consolidation of degraded mortar and plaster and interaction with fixed artistic heritage. Protective and coating layers. Restoration and							
conservation of wood. Deterioration and conservation of metals. Deterioration and conservation of 20th century heritage concrete and modern materials. Technical excursion. Laboratory							
40000	works and in-situ investigations.	714					
132RS1	Repairing and Strengthening Techniques	ZK	5				
Introduction to repair and strengthening. Strengthening of foundations. Discussion of load transfer and long term effects. Strengthening of concrete structures. Strengthening of metal							
structures. L	Jesign of timber structures. Strengthening of timber structures. Design of masonry structures. Strengthening of masonry structures. S		ions.				
132SAI	Structural Analysis Techniques	ZK	5				
Aims, chalenges and difficulties in the modeling and analysis of historical structures. Governing equations of the mechanics of continuum. The finite element method. Elasto-plastic							
constitutive models. Geometrical nonlinearity. Solution procedures for non-linear incremental FE analysis. Damage mechanics, smeared crack models. Applicability of continuum							
1000000	mechanics. Blocky limit analysis of masonry. Demonstration of modelling of real structures and examples.	714					
132SBSD	Seismic Behaviour and Structural Dynamics	K	5				
Introduction to earthquake engineering. Elements of seismology and seismicity. Elements of seismic hazard analysis. Dynamic analysis of single-degree-of-freedom systems. Dynamic							
analysis or multi-degree-or-freedom systems. Dynamic analysis or structures using the finite element method. Response spectrum analysis of linear multi-degree-of-freedom systems.							
in building codes. Elements of soil dynamics. Damage and collapsing mechanisms in existing (particularly historical) structures. Introduction to innovative earthquake-resistant systems.
