Recomended pass through the study plan

Name of the pass: Master specialization Computer Security, in Czech, 2020

Faculty/Institute/Others: Department: Pass through the study plan: Master specialization Computer Security, in Czech, 2020 Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Informatika Type of study: Follow-up master full-time

Note on the pass: Jako volitelné p edm ty lze zapisovat povinné p edm ty sousedních specializací.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

List of courses of this pass:

Code	Name of the course	Completion	Credits
FI-TOP	Academic writing	Z	2
Publishing is an im	oortant and required part of research activity. It is not only about obtaining research results but also about applying them in the form o	of publication. Writi	ng scientific
publications can be	e useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the cou	rse, students will le	earn how to
write a scientific art	icle, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting an	article and reviewir	ng someone
else's article. The	course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester. Da	ates will be determ	ned based
	on the availability of enrolled students.		
FIT-ITI	Modern IT infrastructure	Z,ZK	5
FIT-SEP	World Economy and Business	Z,ZK	4
This course is pre	sented in Czech. The course introduces students of technical university to the international business. It does that predominantly by c	omparing individua	l countries
and key regions of v	vorld economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as	indexes of econom	nic freedom,
corruption and eco	nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of di	scussions based o	n individual
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
FITE-EHD	Introduction to European Economic History	Z,ZK	3
The course introdu	ces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco	nomy through the	description
of the key periods	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	history. From large	economic
area of Roman Em	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial instituti	ons is deciphered.	The course
does not cover de	tailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c	organizations in his	tory. Class
	meetings will consist of a mixture of lecture and discussion.		
NI-ADM	Data Mining Algorithms	Z,ZK	5
The course focuses	s on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students	should know mach	ine learning
basics. The empha	sis is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation sys	ems) and models	(e.g., kernel
	methods).		
NI-ADP	Architecture and Design patterns	Z,ZK	5
The objective of thi	s course is to provide students with both work knowledge about the underlying foundations of object-oriented design and analysis as	well as with unde	standing of
the challenges, issu	ues, and tradeoffs of advanced software design. In the first part of the course, the students will refresh and deepen their knowledge o	f object-oriented p	ogramming
and get familiar with	n the commonly used object-oriented design patterns that represent the best practices for solving common software design problems.	n the second part t	he students
will be introduced to	o the principles of software architecture design and analysis. This includes the classical architectural styles, component based systems	, and some advanc	ed software
	architectures used in large-scale distributed systems.		
NI-AFP	Applied Functional Programming	KZ	5
This course is pres	ented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p	rogramming langu	ages are on
the rise nowadays	and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master	ing this paradigm I	becomes a
	necessary competence of a software engineer: the theory and especially the practice.		
NI-AIB	Algorithms of Information Security	Z,ZK	5
Students will get ac	quainted with the algorithms of secure key generation and cryptographic error (not only biometric) data processing. Furthermore, stude	nts will learn the m	athematical
principles of cryp	tographic protocols (identification, authentication, and signature schemes). Another part of the course is dedicated to malware detec	tion and the use of	machine
	learning in detection systems. The last topic includes practical steganographic methods and attacks on steganographic syste	ms.	
NI-AM1	Middleware Architectures 1	Z,ZK	5
Students will stud	ly new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste	em architecture, we	eb service
architecture and ap	lication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm	unications and hig	n availability
	of applications.		

		774	
NI-AM2	Middleware Architectures 2	Z,ZK	5
Students will learn	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architecture	es, concepts and te	echnologies
	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.	'	
NI-AML	Advanced machine learning	Z,ZK	5
	ices students to selected advanced topics of machine learning and artificial intelligence. The topics present techniques in the field of rec		-
	control and interconnection of physical laws with the field of machine learning. The aim of the exercise is to familiarize students with the	the methods discus	
NI-AOA	Completing a professional event	Z	1
The subject is part	ticipation in a one-off professional event, usually a lecture by a foreign guest of the FIT CTU, concluded with a workshop, a test, drafti	ng a report, etc.Su	ch an event
must be approve	d in advance by the vice-dean for pedagogical activities or the vice-dean for science and research and is presented within the FIT through	ough a website, inf	omail, etc.
NI-APH	Architecture of computer games	Z,ZK	4
Students will gain a	a basic understanding of the various issues in the field of computer games development, especially from a technical point of view, but also	from design and p	hilosophical
perspective. They	will get a grasp of component-oriented and functional-oriented architecture, game mechanics, decision-making processes and base co	mponents that form	n an integral
part of most gam	es. They will also understand the basics of pathfinding, networking and scripting and apply them in practical exercises (labs). An impo	ortant part of the co	urse is an
	implementation of a simple game, with a strong focus on nontrivial game mechanics.		
NI-APR	Selected Methods for Program Analysis	Z,ZK	5
	uces you to program analysis, i.e., the automated reasoning about the behavior of a computer program. We will cover static and dynam		tic Analysis.
	art of reasoning about computer programs without running them. We will look at the analyses for program understanding, optimization		
	Analysis, we will look at the analyses considering individual program runs using a concrete environment and inputs.	,	,
NI-APT	Advanced Program Testing	Z,ZK	5
	n is essential to ensure that a program respects its specification, that changes do not introduce regressions or security issues. The go		-
	advanced program testing techniques, beyond writing unit tests, especially fuzzing and symbolic execution.		to procont
NI-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementa	1 ' 1	4
		1	
NI-ATH	AlgorithmicTheories of Games	Z,ZK	4
-	theory is a branch of mathematics, which has broad applications in economy, biology, politics and computer science. This theory stud		-
	tain competitive process by designinng a mathematical model and investigating the strategies. The traditional task of classical game t	-	-
	es of the game where no player wants to deviate from his strategy. Due to the recent development of computers, internet, social network		-
	is and other concepts the algorithmic point of view is gaining attention. In addition to existential questions we study the problems of el		
	concepts. In this course we introduce the basics of game theory of many players, solution concept (usually equilibria) and methods c	of their computation	
NI-BKO	Error Control Codes	Z,ZK	5
The goa	of the course is to present various ways to detect or correct individual errors and burst errors in data stored into memories or transma	nitted via channels	
NI-BML	Bayesian Methods for Machine Learning	KZ	5
The subject is focu	sed on practical use of basic Bayesian modeling methods in the dynamically evolving machine learning theory. In particular, it studies	the construction of	appropriate
models providing	description of real phenomena, as well as their subsequent use, e.g., for forecasting of future evolution or learning about the hidden v	variables (true obje	ct position
from noisy observa	ations etc.). The emphasis is put on understanding of explained principles and methods and their practical adoption. For this purpose, a	number of real wor	d examples
and applications	will be presented to students, for instance, 2D/3D object tracking, radiation source term estimation, or separation in medical imaging.	The students will the	ry to solve
	some of them.		
NI-BPS	Wireless Computer Networks	Z,ZK	4
Students will lear	n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad	l-hoc networks, mu	lticast and
broadcast mecha	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle	edge of security me	echanisms
	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab	ole tools.	
NI-BUI	Business Informatics	Z,ZK	5
The aim of the cou	rse is to focus on operational, tactical and strategic management of business informatics. Students will gain knowledge in the areas of b	usiness process m	anagement,
	architectures in enterprise informatics. They will also learn about the principles, models and standards (ITIL, COBIT) in IT manageme		
of ICT services a	and resource management (sourcing). Students will learn the process of creating and implementing information strategy, IT Governan	ce, the importance	of ICT for
business and th	ne context of information strategy with global business strategy. They will also gain knowledge in the areas of economic IT manageme	nt, revenue and inv	/estment
	management, IT investment evaluation and human resources management in IT (roles CIO, CEO, CFO).		
NI-BVS	Embedded Security	Z,ZK	5
	c knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of crypto	1 1	
-	nbedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources		
	of computer systems.	J	
NI-CCC	Creative Coding and Computational Art	KZ	4
	practical tasks, get acquainted with creative and yet proven methods of visualizing various types of data. The course freely follows the	1 1	
	uces students to suitable visualization methods for traditional as well as for open data. It combines well-known visualization technique		
.,,	ies. The aim is to create an interesting visualization project. It is planned to work closely with IPR CAMP (Center of Architecture and N		0
	(Institute of Intermedia FEL).		ng) and nivi
		774	F
NI-CPX	Complexity Theory	Z,ZK	5
	rn about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the (in)tractability of difficult problems.	s meory concerning	practical
			1
NI-CTF	Capture The Flag	KZ	4
	The course is designed to introduce students to CTF competitions and let them gain practical experience in the field of cyber se	-	4
NI-DDM	Distributed Data Mining	KZ	. 4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of		-
data processing fr	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	and will be capable	to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DDW	Web Data Mining	Z,ZK	5
	arn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain		-
techniques for Web	o crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overvie	w of most recent de	velopments
	in the field of social web and recommendation systems.		

NI-DID	Digital drawing	Z	2
The course will intro	oduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, perst	pective and color th	eory, which
	apply in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course	-	
	learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practi	ce gained knowled	-
NI-DIP	Diploma Project	Z	30
NI-DNP	Advanced .NET	Z,ZK	4
	re an overview of platform .NET and will gain knowledge about technologies ASP.NET Core, Entity Framework Core, .NET MAUI (WI		
get notions of Azur	e DevOps and GIT. Students will get practical experience in semestral work where they will create a client-server application utilizing	technologies ASP.	NET Core,
	Entity Framework Core and (Blazor, .NET MAUI or WPF) and also Azure DevOps and GIT.		
NI-DPH	Game Design	Z,ZK	5
	ments the NI-APH (Architecture of Computer Games) and BI-VHS (Virtual gaming worlds) course, while focusing primarily on game of a standard data of the primarily and for games design, such as level design, games level design, showed for games mechanism.	-	
	er knowledge of the principles used for games design, such as: level design, gameplay design, character design, game mechanics of The students will get an overview of game development from the designer's perspective, from theoretical concepts to practical impler		-
	projects.	inentation applied to	U Semestiai
NI-DSS	Decision Support Systems	Z,ZK	5
	se is to provide students with knowledge and skills in decision support systems, their classification (Powerova), selected principles of		-
	inted decision support systems. Students will also gain knowledge of multicriterial decision-making methods and game theory. They will		
-	onceptually and ontologically oriented decision support systems and the basics of distribution, optimization and evolution methods a		
NI-DSV	Distributed Systems and Computing	Z,ZK	5
	iced to methods for coordination of processes in distributed environment characterised by nondeterministic time responses of computing		
	n basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that		
	data and services, and safety in case of failures.		
NI-DSW	Design Sprint	Z	2
	on projects using the Design Sprint method, developed by Google. THanks to this method the teams are able to go from idea to valida	ted prototype in 5 d	ays. During
the course the stu	dents will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting wit	h research and finis	shing with
	testing the prototypes (plus final presentation).		
NI-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
The course intends	to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with	the most fundame	ntal notions
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.	,	
NI-DZO	Digital Image Processing	Z,ZK	4
	nts a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg	-	-
-	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is al		
	rocessing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR	-	-
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv		
	jid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, and		-
NI-EDW	Enterprise Data Warehouse Systems	Z,ZK	5
	a Warehouses course focuses on the area of business intelligence. Students will be introduced to business intelligence methods and		-
not only in design	ng warehouses and various architectures, but also their deployment and maintenance. This course also includes an introduction to t visualization.	ne area or reporting	j anu uala
NI-EHW	Embedded Hardware	Z.ZK	5
	basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the	1 ' 1	-
0	from their specialized structure for effective computation and acceleration. Design of fast custom computing machines is discussed,		
-,	of internal communication, parallelism extraction and utilization in special structures and system architectures.		
NI-EPC	Effective C++ programming	Z,ZK	5
	to use the modern features of contemporary versions of the C++ programming language for software development. The course focus	1 1	-
	ciency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor t		о ,
NI-ESC	Experimental Project Course	KZ	8
	ct course offers a holistic exploration of the design process, providing students with a well-rounded understanding of the principles, n		tools used
in designing techno	logy-driven solutions that are user-centric and industry-relevant. Throughout the semester, students will work on real-world design pro	ojects, collaborate w	ith industry
experts, and learn	to integrate theory with practical application. Through a hands-on, project-based learning approach, students will develop their skills	s in user-centered d	lesign and
	user experience evaluation, as well as gain experience working in a team to design and prototype a functional solution."		
NI-ESW	Embedded Software	Z,ZK	5
Embedded software	course acquainted students with the specifics of software development for embedded systems. The course covers the areas from the ba	asic techniques of pr	ogramming
in C language and	I code optimizations, through typical areas as the reliable software development, embedded operating systems, signal processing, u	p to sophisticated te	echniques
	combined with artificial intelligence.		
NI-EVY	Efficient Text Pattern Matching	Z,ZK	5
Students get knowle	edge of efficient algorithms for text pattern matching. They learn to use so called succinct data structures that are efficient in both acces	s time and memory	complexity.
	They will be able to use the knowledge in design of applications that utilize pattern matching.		
NI-FME	Formal Methods and Specifications	Z,ZK	5
Students are able to	o describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so	mware tools that all	ow to prove
	basic properties of software.		4
NI-FMT	Finite model theory so is to introduce students to the basics of finite model theory. The ariginal methation is the questions expressibility and varifiability of	Z,ZK	4
	se is to introduce students to the basics of finite model theory. The original motivation is the questions expressibility and verifiability of nception in the 1970s, the course has evolved rapidly and touched on many other areas of theoretical computer science, such as de-		
ayatema. Since its i	Constraint Satisfaction Problem (CSP), the theory of algorithmic meta-theorems and combinatorics.	scriptive complexity	uieory, trie
NI-GAK		Z,ZK	5
	Graph theory and combinatorics ss is to introduce the most important topics in graph theory, combinatorics, combinatorial structures, discrete models and algorithms.	1	
-	e basic principles but also on applications in problem solving and algorithm design. The topics include: generating functions, selected top	-	-
-	reory, introduction to probabilistic method, properties of various special classes of graphs and combinatorial structures. The theory v		
,	of combinatorics on words, formal languages and bioinformatics.		
L			

NI-GEN	Code Generators	Z,ZK	5
Advanced technic	ues of translating programs written in high-level programming languages are essential for understanding the field of systems program	nming. This primar	ily involves
understanding the	algorithms and techniques used to translate more complex programming constructs of modern languages employed in systems progra	amming. Students	will become
	familiar with both the theoretical and practical aspects of implementing the back-end of optimizing compilers for programming lang	guages.	
NI-GLR	Games and reinforcement learning	Z,ZK	4
The field of reinfo	reement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelligen		intended to
	give you both theoretical and practical background so you can participate in related research activities. Presented in English		
NI-GNN	Graph Neural Networks	Z,ZK	4
	oduces students to advanced artificial intelligence techniques for working with graphs. Lectures will focus on the latest graph neural n		
representations	f nodes, edges and entire graphs. The techniques discussed cover various types of graphs, including time-varying graphs. The last pa graph generation and interpretability of graph neural networks. In the exercises, students will try out selected techniques and pro		ISO COVEIS
			F
NI-GOL	Programming of distributed systems in GO	KZ	5
NI-GPU	GPU Architectures and Programming	Z,ZK	5
-	cnowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CUI videspread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com		
which is alleady a	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.		65, 510061115
NI-GRI	Grid Computing	Z,ZK	5
	Grid computing and gain knowledge about the world-wide network and computing infrastructure.	2,213	5
NI-HCM	Mind Hacking	ZK	5
	is an emerging discipline that is closely related to cyber security. While the domain of cyber security is the protection of networks, info	I	-
• •	nitive security is the protection of the human mind from intentional and unintentional digital manipulation. The topic of cognitive securi		
the context of infor	nation warfare, increasing digital dependence and the development of artificial intelligence, where these phenomena from the Internet	environment have	real societal
	impacts such as disruption of social cohesion, threats to democracy or war.		
NI-HMI2	History of Mathematics and Informatics	ZK	3
This course is p	esented in Czech. Selected topics {Infinitesimal calculus, probability, number theory, general algebra, different examples of algorithms	s, transformations,	recursive
	functions, eliptic curves, etc.) note on possibilities of applications of some mathematical methods in informatics and its develop	ment.	
NI-HSC	Side-Channel Analysis in Hardware	Z,ZK	4
	dicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack	-	
	ide channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and	-	-
	hey also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel		-
NI-HWB	Hardware Security	Z,ZK	5
	es the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguards eans. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Studer	-	-
-	potographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	-	suge about
NI-IAM	Internet and Multimedia	Z.ZK	4
	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	1 '	1
	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u		
audiovisual transr	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effe	ect of various com	ponents on
the quality and late	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the	e scene up to the p	presentation
	for audience.		
NI-IBE	Information Security	ZK	2
	prmation and IS/ICT security management systems (ISMS), methods for information access control, and basic norms and international		
	d methods for management of internal and external security threats, for IS/IT security audits, and for application security testing (e.g.		
NI-IKM	Internet and Classification Methods	Z,ZK	4
	students get acquainted with classification methods used in four important internet, or generally network applications: in spam filtering		
	ion systems and in intrusion detection systems. However, they will learn more than only how classification is performed when solving d of these applications, they get an overview of the fundamentals of classification methods. The course is taught in a 2-weeks cycle w		-
, s	During the exercises, the students on the one hand implement simple examples to topics from the lectures, on the other hand consult

Students will und	erstand methods and techniques of computational intelligence that are mostly nature-inspired, parallel by nature, and applicable to m how these methods work and how to apply them to problems related to data mining, control, intelligen games, optimizations,		y will learn	
NI-MZI	Mathematics for data science	Z,ZK	4	
In this course, stud	lents are introduced to those fields of mathematics that are necessary for understanding standard methods and algorithms used in da	ata science. The stu	udied topics	
include mainly: I	inear algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princ	ciple, gradient meth	ods) and	
	selected notions from probability theory and statistics.	7		
NI-NLM	Neural Language Models lents will learn the technical foundations of the Transformer architecture as well as the practical aspects of using language models. The	Z	5 s is to teach	
	students how to use language models to solve problems, make informed risk assessments, and work critically with the scientific li	-		
NI-NMS	Neural Networks, Machine Learning and Randomness	Z,ZK	4	
Stochastic metho	ds, i.e. methods based on randomness, are extremely important for the construction and training of neural networks as well as a num	1 1	ne learning	
	urse "Neural networks, machine learning and randomness" will discuss in sufficient depth a number of specific types of neural networ	-	-	
	ell as a number of specific stochastic methods for neural networks and machine learning. In the final two topics, it explains the general			
neural networks a	nd shows that, in addition to the use of randomness in neural networks and machine learning, machine learning models, including ne of the most important applications of randomness stochastic optimization methods, which include e.g. popular evolutionary algo		used in one	
NI-NMU	New media in art and design	ZK	3	
-	duces students to the issue of using new media in artistic and design work. Key topics are moving image, internet, computer game ar	1 1	-	
	dent with the largest possible range of creative approaches in new media. The subject emphasizes dialogue with students, especially		-	
	art projects.			
NI-NON	Nonlinear Continuous Optimization and Numerical Methods	Z,ZK	5	
	roduced to nonlinear continuous optimization, principles of the most popular methods of optimization and applications of such method			
	finite element method and the finite difference method used for solving ordinary and partial differential equations in engineering. They quations that arise from discretization of the continuous problems by direct and iterative algorithms. They will also learn to implement			
	as well as in parallel.	these algorithms se	equentially	
NI-NSS	Normalized Software Systems	ZK	5	
	the foundations of normalized systems theory that studies the evolvability of modular structures based on concepts from engineering	I —·· I	-	
theory and entropy	r from thermodynamics. Students will understand a set of principles that indicate where violations of stability and entropy-related issu	es occur in any give	en software	
	second part of the course, students learn how to construct software architectures using a set of 5 design patterns called elements. The	-		
functionality of info	rmation systems in terms of storing data, executing actions, workflows, connectors, and triggers, while handling violations of the stability	and entropy-related	d principles.	
NI-NUR	This knowledge allows students to realize new levels of evolvability in software architectures.	Z,ZK	5	
-	User Interface Design stand the theorical background of human-computer interaction and user interface (UI) design, will learn formal description of UIs, forma		-	
	ocesures. They get acquainted with graphical, speech, and multimodal UIs. Thanks to the gained knowledge, the students will be able			
NI-OLI	Linux Drivers	Z,ZK	4	
The Linux operatin	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po	1 ¹ 1	and FPGAs	
	iability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development		ents. The	
	burse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practic			
NI-OSY	Operating Systems and Systems Programming system programming in UNIX environment. Emphasis is given on kernel development with focus on kernel architecture and kernel d	Z,ZK	5	
	ment, memory management, file operations and architecture of modern file systems, device drivers and network programming. The c		•	
	ess, upgrades of existing kernels, kernel booting, debugging using dynamic instrumentation, and techniques to guarantee portability.			
	eal-time operating systems are also discussed. Theoretical and general principles are demonstrated on the LINUX kernel. Within labs	-		
	focused on development of LINUX kernel modules.			
NI-PAM	Efficient Preprocessing and Parameterized Algorithms	Z,ZK	4	
-	optimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often necess	-		
	. We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often one inputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity expone			
, , , , , , , , , , , , , , , , , , ,	n the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial tir	, , ,	/1	
	sible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solution		-	
plethora of param	neterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pro-	• ·	t exist. We	
	will also not miss out the relations to other approaches to hard problems such as moderately exponential algorithms or approximation			
NI-PAS	Advanced Aspects of Business	Z,ZK	. 4	
The aim of the c	purse is to provide students with advanced (compared to the bachelor's degree) knowledge and skills needed to establish and run the management, especially in law, administration (necessary steps and documents), business economics, foreign trade and related		business	
NI-PDB	Advanced Database Systems	Z,ZK	5	
	emselves in problems of evaluation and optimization of SQL queries. The next part of the course deals with new concepts of databas			
	ne related new data models (XML, graph databases, column databases) and languages for working with them (XQuery, XPath, CYPH			
	the course deals with performance evaluation of database machines.			
NI-PDD	Data Preprocessing	Z,ZK	5	
	repare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s		-	
time series, etc.,	and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris pages.	tics from images or	f from web	
NI-PDP	Parallel and Distributed Programming	Z,ZK	6	
	mputer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores			
	biquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor			
with architectures of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication operations, and languages and				
	parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and or		-	
learn the techniques of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course includes a semester project of practical programming in OpenMP and MPI for solving a particular nontrivial problem.				

NI-PG1	Computer Grafics 1	ZK	4
	on graphic courses (mainly BI-PGA and BI-PGR) and the knowledge from these courses is deepened by state-of-the-art knowledge. The	0	
	nced computer graphics. Students will gain practical knowledge with realistic texturing and raytracing methods. An integral part of the	-	
	r subsequent implementation. The course will be followed by a course PG2 supplementing the knowledge of PG1 on other areas and		
NI-PIS	Enterprise Information Systems	Z,ZK	5
	sed on the current IT requirements of large companies in the Czech Republic (Top 100). The basis is Data management, storage of b ntelligence). The principles of solving the overall architecture of information systems in the banking, insurance and telecommunication		
	thermore, students will get acquainted with the life cycle of information systems in the company / organization and its impact on the bus	-	
	equainted with technologies that have proven themselves in the elimination of basic risks in the planning, implementation and operation		
	company / organization.		
NI-PIV	Computer Vision	Z,ZK	5
	ion course focuses on the theoretical and practical mastery of modern methods and algorithms in the field of image data processing. St		-
	oles of computer vision, gradually move to advanced computer vision techniques using deep learning. Emphasis is placed on theoreti		
practical applicatio	ons and implementation of learned methods during exercises. Topics covered include morphological operations, image filtering, color re	presentations, objec	ct detection
and recognition a	ind segmentation through classical and recent approaches based on deep learning, deep neural networks for computer vision (includ	ing CNN, RCNN, YC	DLO, ViT),
	motion detection, visual expressiveness (saliency).		
NI-PLS1	Programming Language Seminar	Z	. 2
-	g Language Seminar aims to introduce students to research in programming languages. It has the format of a reading group in which		
about programmin	g languages and related fields. Participating students are expected to present a paper of their interest and actively participate in the is a joint venue between FIT and MFF CUNI. It is open to all students and researchers interested in programming language		laing group

Just-in-time compilation and some optimization techniques Through a series of guest lectures, introduce you to various advanced topics and implementations of real-world VMs, including Dynamic optimizations, speculations, and deoptimizations Language implementation frameworks Read-world VMs NI-SRF System Security and Forensics Z.ZK 5 Students will get familiar with aspects of system security (principles of end station security, principles of security policies, security models, authentication concepts). Furthermore, students will get familiar with forensic analysis as a tool for investigating security incidents (techniques used by malicious software/attackers and forensic analysis techniques and the importance of operating system/operating system artifacts or file system for attack analysis and detection). NI-SCE1 Computer Engineering Seminar Master I 7 4 The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. NI-SCE2 Computer Engineering Seminar Master II Ζ 4 The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. NI-SCR Statistical Analysis of Time Series 7.7K 5 The course deals with the practical use of the basic time series modelling theory in engineering tasks, ranging from economics (stock exchange prices, employment) and industrial problems (modelling of signals and processes) to computer networks (network components load, attacks detection). The students learn to select a convenient process model, estimate its parameters, analyze its properties and use it for forecasting of future or intermediate values. The stress is put on understanding and adoption of the main principles based on practical real-world examples. Both the lab classes and the lectures exploit freely available software packages in order to provide easy and straightforward transfer of students' knowledge from the academic to the real world. NI-SEP World Economy and Business Δ 7 7K This course is presented in Czech. However, there is an English variant in the program Informatics (N1801 / 4793). The course introduces students of technical university to the international business. It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite. NI-SIB Network Security Z.ZK 5 NI-SIM **Digital Circuit Simulation and Verification** Z,ZK 5 The aim of the course is to acquaint the students with principles of digital circuit simulation at RTL (Register Transfer Level) and TLM (Transaction Level Modeling) levels and with the properties of proper tools. The course covers recent verification methods, too. NI-SWE Semantic Web and Knowledge Graphs Z,ZK 5 The students will learn the most recent concepts and technologies of the Semantic Web. The course will provide an overview of the Semantic Web technologies, methods and best practices for modelling, integration, publishing, querying and consumption of semantic data. The students will also gain skills in creation of knowledge graphs and their systematic quality assurance. Parsing and Compilers NI-SYP 7.7K 5 The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of various variants and applications of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. NI-SZ1 Knowledge Engineering Seminar Master I Ζ 4 On this seminar you will present a research paper from a top institute / research group to your peers. You will learn what is being cooked in top research labs around the world. Additionally, you will learn how to properly present and read scientific papers. The work in the seminar will prepare you to attend (and profit from) top machine learning and AI conferences and summer schools, as well as FIT's own Summer Research Program (VyLet). NI-SZ2 Knowledge Engineering Seminar Master II Ζ 4 On this seminar you will present a research paper from a top institute / research group to your peers. You will learn what is being cooked in top research labs around the world. Additionally, you will learn how to properly present and read scientific papers. The work in the seminar will prepare you to attend (and profit from) top machine learning and AI conferences and summer schools, as well as FIT's own Summer Research Program (VyLet). NI-TES Systems Theory Z,ZK 5 Today, humankind has the ability to develop systems of incredible complexity (e.g., trains, microprocessors, airplanes, nuclear power plants). However, the costs of managing this complexity and of ensuring the correct behavior of a given system have become critical. A key technique for mastering this complexity is the usage of models that describe only those aspects of the systems that are important for the task at hand, and automated tools for analyzing those models. This subject will present theory and algorithms that form the basis for the modeling and analysis of complex systems. NI-TKA Z,ZK Category Theory 4 NI-TNN Theory of Neural Networks 7 7K 5 In this course, we study neural networks from the point of view of the theory of function approximation and from the point of view of probability theory. At first, we recall basic concepts pertaining to artificial neural Networks, such as neurons and connections between them, types of neurons from the point of view of signal transmission, network topology, somatic and synaptic mappings, network training, and the role of time in neural networks. In connection with network topology, we get acquainted with its transformation into a canonical topology, and in connection with somatic and synaptic mappings, with their composition into mappings computed by the Network, Finally in connection with training, we pay attention to the problem of overtraining and to the fact that training is actually a specific optimization task, recalling the most typical objective functions and the most important optimization methods employed for neural network training. We will see the meaninig of all these concepts in the context of common kinds of forward neural networks. Within the topic approximation approach to neural networks, we first notice the connection of neural networks to expressing functions of many variables using functions of fewer variables (Kolmogorov theorem, Vituškin theorem). Afterwards, we will see how the universal approximation capacity of neural networks can be mathematically formalized as the sets of mappings computed by neural networks being dense in important Banach spaces of functions, in particular in the spaces of continuous functions, spaces of functions integrable with respect to a finite measure, spaces of functions with continuous derivatives, and Sobolev spaces. Within the topic probabilistic approach, we first get acquainted with training based on expectation and training based on a random sample, and with probabilistic assumptions about training data with which those two kinds of neural networks can be employed. We will see how it is possible to get an estimate of the conditional expectancy of network outputs conditioned by its inputs using the expectancy based learning. We recall the strong and the weak law of large numbers and get acquainted with an analogy of the strong law of large numbers for neural networks and with the assumptions for its validity. Finally, we recall the central limit theorem, get acquinted with its analogy for neural networks, with the assumptions for its validity and with the hypothesis tests based on it. We will see how those tests can be employed to search for the topology of the network. NI-TS1 Theoretical Seminar Master I 7 4 Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.

	It is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic		
are treated individu	ally and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	work with scientific	papers and
NI-TSP	Testing and Reliability	Z,ZK	5
	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre		1
-	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	-	
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-TSW	Software Product Development	KZ	4
NI-TVR	The course is presented in Czech. Virtual Reality Technology	Z,ZK	3
	troduced to the basic concepts of virtual reality. Techniques for displaying virtual worlds (CAVE, HMD,) and the possibilities of cont		-
	icking, eye tracking) will be discussed. Furthermore, the concepts of mixed and augmented reality will be introduced. Finally, ways of	-	
	reality will be presented.	Ū	0
NI-UMI	Artificial intelligence	Z,ZK	5
The course covers	s search and inference algorithms in major formal paradigms used in artificial intelligence such as logic theories, constraint programn	ning and automate	d planning.
	The main principles and practical applications of discussed techniques will be illustrated.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
•	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	•	, ,
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect		-
	mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in		
	and development tools (Continuous integration and development).		
NI-VGA	Video Games Architecture	Z,ZK	5
	s a wide range of topics, procedures and methodologies related to the development of computer games - from a technical point of vie		
	of view. In the lectures, students will be guided through the history of development, the structure of game engines, component and fut, physics, graphics, artificial intelligence and multiplayer. The exercises will then cover selected technological topics in greater detail, in		
game development	some game mechanics, in the form of practical demonstrations.	nordaling ways of in	ipiemenang
NI-VMM	Retrieval from Multimedia	Z,ZK	5
The student obtains	Retrieval from Multimedia s general knowledge regarding interfaces of portals providing multimedia content, the principles of similarity search, the methods of fear objects, indexing, and structure of distributed search engines.	ture extraction from	n multimedia

NIE-PDL	Practical Deep Learning	KZ	5		
This course is designed to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine learning framework. Throughout					
the course, students will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such as computer vision and natural					
language processing.					
NIE-PML	Personalized Machine Learning	Z,ZK	5		
Personalized machine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristics and behaviors of individual					
entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal interests, its principles can be applied					
to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theoretical, algorithmic, and practical					
perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial communities.					
PI-SCN	Seminars on Digital Design	ZK	4		
This subject deals with problems of realization and implementation of digital circuits - both combinational and sequential. Basic means of description of digital circuits and basic logic					
synthesis and optimization algorithms are described. Basics of EDA (Electronic Design Automation) systems are given, together with combinatorial problems emerging in EDA.
