Recomended pass through the study plan

Name of the pass: Master specialization System Programming, in Czech, 2020

Faculty/Institute/Others:

Department:

Pass through the study plan: Master specialization System Programming, in Czech, version from 2020 Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Follow-up master full-time

Note on the pass: Jako volitelné p edm ty lze zapisovat povinné p edm ty sousedních specializací.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of seme	ster: 1

Code	Name of the course	Completion	Credits
FI-TOP	Academic writing	Z	2
-	portant and required part of research activity. It is not only about obtaining research results but also about applying them in the form	-	-
•	e useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the cou		
	ticle, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting an		0
else's article. I ne	course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester. D	ates will be determ	lined based
	on the availability of enrolled students.	1/7	
FIT-ACM1	Programming Practices 1	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.	1/7	-
FIT-ACM2	Programming Practices 2	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
FIT-ACM3	Programming Practices 3	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
FIT-ACM4	Programming Practices 4	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
FIT-ACM5	Programming Practices 5	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
FIT-ACM6	Programming Practices 6	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		1
FIT-ITI	Modern IT infrastructure	Z,ZK	5
	and time-invariable range of software or hardware, this subject tries to explain the issue as a whole and in the context of the time. A m		0
is understood her	e as a complex whole, the individual parts of which must be reconciled from different aspects of the view using current technologies.	The proposed solu	ition should
	thus be capable of continuous and economically optimal operation.		
FIT-SEP	World Economy and Business	Z,ZK	4
	esented in Czech. The course introduces students of technical university to the international business. It does that predominantly by o		
, ,	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as		,
corruption and ecc	pnomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of c readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.	liscussions based o	on individual
		7 71/	2
FITE-EHD	Introduction to European Economic History	Z,ZK	3
	luces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global economic history of the process it for use production by the process of the proce		-
	s in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic npire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institu		
	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and	-	
	meetings will consist of a mixture of lecture and discussion.	organizatione in me	
NI-AFP	Applied Functional Programming	KZ	5
	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional	1	-
-	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, maste		-
	necessary competence of a software engineer: the theory and especially the practice.		
NI-AML	Advanced machine learning	Z,ZK	5
The course introdu	ices students to selected advanced topics of machine learning and artificial intelligence. The topics present techniques in the field of re	commendation sys	tems, image
processing,	control and interconnection of physical laws with the field of machine learning. The aim of the exercise is to familiarize students with	the methods discu	ssed.
NI-AOA	Completing a professional event	Z	1
	ticipation in a one-off professional event, usually a lecture by a foreign guest of the FIT CTU, concluded with a workshop, a test, draft	ing a report, etc.Su	ich an event
must be approve	d in advance by the vice-dean for pedagogical activities or the vice-dean for science and research and is presented within the FIT th	rough a website, inf	fomail, etc.
NI-APH	Architecture of computer games	Z,ZK	4
Students will gain a	a basic understanding of the various issues in the field of computer games development, especially from a technical point of view, but als	o from design and p	hilosophical
perspective. They	will get a grasp of component-oriented and functional-oriented architecture, game mechanics, decision-making processes and base co	omponents that forr	n an integral
part of most gam	es. They will also understand the basics of pathfinding, networking and scripting and apply them in practical exercises (labs). An imp	ortant part of the co	ourse is an
	implementation of a simple game, with a strong focus on nontrivial game mechanics.		
NI-APR	Selected Methods for Program Analysis	Z,ZK	5
	uces you to program analysis, i.e., the automated reasoning about the behavior of a computer program. We will cover static and dyna	-	-
we will look at the	art of reasoning about computer programs without running them. We will look at the analyses for program understanding, optimization	ns, error detection.	. In Dynamic
	Analysis, we will look at the analyses considering individual program runs using a concrete environment and inputs.	1	1
NI-APT	Advanced Program Testing	Z,ZK	5
Testing a program	n is essential to ensure that a program respects its specification, that changes do not introduce regressions or security issues. The g	oal of the course is	to present
	advanced program testing techniques, beyond writing unit tests, especially fuzzing and symbolic execution.		
NI-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementations		1
NI-ATH	AlgorithmicTheories of Games	Z,ZK	4
-	theory is a branch of mathematics, which has broad applications in economy, biology, politics and computer science. This theory stu		-
	tain competitive process by designinng a mathematical model and investigating the strategies. The traditional task of classical game	-	-
	es of the game where no player wants to deviate from his strategy. Due to the recent development of computers, internet, social networ		-
	is and other concepts the algorithmic point of view is gaining attention. In addition to existential questions we study the problems of e	-	
solution	concepts. In this course we introduce the basics of game theory of many players, solution concept (usually equilibria) and methods	or their computatior	n.

NI-BPS	Wireless Computer Networks	Z,ZK	4
	n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ac		
broadcast mechar	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowl		echanisms
NI-CCC	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab Creative Coding and Computational Art	KZ	4
	ractical tasks, get acquainted with creative and yet proven methods of visualizing various types of data. The course freely follows the	1	
	ices students to suitable visualization methods for traditional as well as for open data. It combines well-known visualization technique		•
modern technologi	es. The aim is to create an interesting visualization project. It is planned to work closely with IPR CAMP (Center of Architecture and I	Metropolitan Planni	ng) and IIM
	(Institute of Intermedia FEL).		
NI-CPX	Complexity Theory	Z,ZK	5
Students will lear	n about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the	theory concerning	g practical
NI-CTF	(in)tractability of difficult problems. Capture The Flag	KZ	4
NI-CTF	The course is designed to introduce students to CTF competitions and let them gain practical experience in the field of cyber se		4
NI-DDM	Distributed Data Mining	KZ	4
	state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands (1 1	large scale
data processing fra	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	and will be capable	to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DID	Digital drawing	Z	2
	oduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, persp apply in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course		-
	e learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practi		
NI-DIP	Diploma Thesis	Z	30
NI-DNP	Advanced .NET	Z,ZK	4
	re an overview of platform .NET and will gain knowledge about technologies ASP.NET Core, Entity Framework Core, .NET MAUI (W		and also will
get notions of Azur	re DevOps and GIT. Students will get practical experience in semestral work where they will create a client-server application utilizing	technologies ASP	NET Core,
	Entity Framework Core and (Blazor, .NET MAUI or WPF) and also Azure DevOps and GIT.		
NI-DPH	Game Design	Z,ZK	5
	ments the NI-APH (Architecture of Computer Games) and BI-VHS (Virtual gaming worlds) course, while focusing primarily on game of the primarily and for games design, such as level design, games have been as the primarily design, approximately design	-	
	er knowledge of the principles used for games design, such as: level design, gameplay design, character design, game mechanics of The students will get an overview of game development from the designer's perspective, from theoretical concepts to practical imple		-
	projects.		oomoonar
NI-DSW	Design Sprint	Z	2
Students will work of	on projects using the Design Sprint method, developed by Google. Thanks to this method the teams are able to go from idea to valida	ted prototype in 5 c	days. During
the course the stu	idents will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting wit	h research and fini	shing with
	testing the prototypes (plus final presentation).	7 71	F
NI-DVG	Introduction to Discrete and Computational Geometry to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with	Z,ZK	5
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.	The most fundame	
NI-DZO	Digital Image Processing	Z,ZK	4
This course prese	nts a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg	porithms that are bo	
	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is al		
	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR	-	-
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray con- gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, a		
NI-EDW	Enterprise Data Warehouse Systems	Z,ZK	5
	ta Warehouses course focuses on the area of business intelligence. Students will be introduced to business intelligence methods and		-
not only in design	ing warehouses and various architectures, but also their deployment and maintenance. This course also includes an introduction to t	he area of reporting	g and data
	visualization.		
NI-EPC	Effective C++ programming	Z,ZK	5
	to use the modern features of contemporary versions of the C++ programming language for software development. The course focu iciency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor is		ng effectivity
NI-ESC	Experimental Project Course	KZ	8
	ct course offers a holistic exploration of the design process, providing students with a well-rounded understanding of the principles, r	1	-
с <i>,</i>	logy-driven solutions that are user-centric and industry-relevant. Throughout the semester, students will work on real-world design pro-	•	
experts, and learn	to integrate theory with practical application. Through a hands-on, project-based learning approach, students will develop their skills	in user-centered o	design and
	user experience evaluation, as well as gain experience working in a team to design and prototype a functional solution."	1	
NI-FMT	Finite model theory	Z,ZK	4
	se is to introduce students to the basics of finite model theory. The original motivation is the questions expressibility and verifiability of nception in the 1970s, the course has evolved rapidly and touched on many other areas of theoretical computer science, such as de-		
systems. Since its i	Constraint Satisfaction Problem (CSP), the theory of algorithmic meta-theorems and combinatorics.	scriptive complexity	/ lieory, lie
NI-GEN	Code Generators	Z,ZK	5
	ues of translating programs written in high-level programming languages are essential for understanding the field of systems program		
understanding the a	algorithms and techniques used to translate more complex programming constructs of modern languages employed in systems progr	amming. Students	will become
 	familiar with both the theoretical and practical aspects of implementing the back-end of optimizing compilers for programming lan		
NI-GLR	Games and reinforcement learning	Z,ZK	4
I ne field of reinfor	cement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelliger give you both theoretical and practical background so you can participate in related research activities. Presented in Englis		intended to
NI-GNN	give you both medical and practical background so you can participate in related research activities. Presented in Englis Graph Neural Networks	Z,ZK	4
	Graph Neural Networks oduces students to advanced artificial intelligence techniques for working with graphs. Lectures will focus on the latest graph neural r	· · · ·	
	f nodes, edges and entire graphs. The techniques discussed cover various types of graphs, including time-varying graphs. The last p		-
	graph generation and interpretability of graph neural networks. In the exercises, students will try out selected techniques and pro-	oblems.	

NI-GOL	Programming of distributed systems in GO	KZ	5
NI-GRI	Grid Computing	Z,ZK	5
	Grid computing and gain knowledge about the world-wide network and computing infrastructure.	71/	_
NI-HCM	Mind Hacking is an emerging discipline that is closely related to cyber security. While the domain of cyber security is the protection of networks, info	ZK prmation systems	5 and assets
	itive security is the protection of the human mind from intentional and unintentional digital manipulation. The topic of cognitive securi		
the context of inform	nation warfare, increasing digital dependence and the development of artificial intelligence, where these phenomena from the Internet	environment have	real societal
	impacts such as disruption of social cohesion, threats to democracy or war.	717	-
NI-HMI2	History of Mathematics and Informatics esented in Czech. Selected topics {Infinitesimal calculus, probability, number theory, general algebra, different examples of algorithms	ZK	3
	functions, eliptic curves, etc.) note on possibilities of applications of some mathematical methods in informatics and its develop		leculaive
NI-HSC	Side-Channel Analysis in Hardware	Z,ZK	4
	dicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack	-	
	de channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and	-	-
NI-IAM	hey also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel Internet and Multimedia		e. 4
	e is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	Z,ZK uisition of AV signa	
	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u	-	
	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effective of the strength of		
the quality and later	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the	e scene up to the p	presentation
NI-IBE	for audience. Information Security	ZK	2
	rmation and IS/ICT security management systems (ISMS), methods for information access control, and basic norms and internationation		
	d methods for management of internal and external security threats, for IS/IT security audits, and for application security testing (e.g.		-
NI-IKM	Internet and Classification Methods	Z,ZK	4
	tudents get acquainted with classification methods used in four important internet, or generally network applications: in spam filtering		-
	on systems and in intrusion detection systems. However, they will learn more than only how classification is performed when solving of these applications, they get an overview of the fundamentals of classification methods. The course is taught in a 2-weeks cycle w		
e e	During the exercises, the students on the one hand implement simple examples to topics from the lectures, on the other hand consult		
NI-IOS	Advanced techniques in iOS applications	KZ	4
	the latest trends in mobile development technologies for iOS platform. Class covers advanced topics, students need to know all the back	asics from the beg	inners class
	BI-IOS.		
NI-IOT	Internet of Things	Z,ZK	4
-	ocused on the area of hardware and software technologies for the strongly growing computer support of various devices. Its goal is fa development elements (Raspberry Pi, Arduino Due) and with the language for efficient application development and modification (G		avaliable
NI-IVS	Intelligent embedded systems	KZ	4
	ed systems course for master's degree is focused on high-level technology embedded systems integrating artificial intelligence. The	course is an advar	nce version
•	mbedded system fundamentals course for the bachelor degree. The aim of the course is to teach students humanoid robot programm	•	
development. Lectu	res provide basis of motion control, sensor reading, application interfaces, robot navigation and development tools. In labs, students of combining knowledge of various courses like nature inspired algorithms, data mining algorithms, image recognition and web techn	-	applications
NI-KOP	Combinatorial Optimization	Z,ZK	6
	ain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not only	,	
	also to apply and evaluate heuristics for practical problems.		
NI-KTH	Combinatorial Theories of Games	Z,ZK	4
-	theory is a branch of mathematics, which has broad applications in economy, biology, politics and computer science. This theory stud ain competitive process by designinng a mathematical model and investigating the strategies. The traditional task of classical game the strategies are the strategies and the strategies are strategies.		-
	s of the game where no player wants to deviate from his strategy. Historically, the second big development in game theory of two-playe		•
	onway, Berlekamp and Guy. They developed a theory, originally used for solving end-games in Go, into a full fledged field. The idea is		
	atible games can be added, that is, played simultaneously. This led to the algrebraic approach to study combinatorial games. The this	-	-
	established the theory of positional games (like tic-tac-toe and hex). In analysis of these game, one cannot escape the brute-force tra x introduced the "false probabilistic method", which aims to tackhle this problem. In this course we build the foundation of the theory c		
	n theoretical analysis of games and building the theory, not on the programming aspects of game solving algorithms. The course requ		
to mathematically	analyse, think and proof. The course is also suitable for bachelors student in the third year, who attended introduction to graph theory	, as well as for Ph	D students
	looking for research topics.		
NI-KYB	Cybernality	ZK	5
	iainted with the fundamentals of legislation and international activities in the area of fighting cybercrime. Students will understand the f systems for computer surveillance and traffic monitoring in the cyberspace. Students will also familiarize themselves with hacker activ		
	vill also discuss the cooperation of the state agencies and subjects dealing with defence of the cyberspace (especially CSIRT and CE		
NI-LOM	Linear Optimization and Methods	Z,ZK	5
	applications of optimization methods in computer science, economics, and industry. They are aware of practical importance of linear a		
	th optimization software and are familiar with languages used in programming of that software. They get skills in formalization of optim	•	
-	cheduling of tasks to processors, analysis of network flows), distribution and allocation of resources (transportation problems, travelli nics, and modelling of conflicts via the game theory. They get an overview of computational complexity of optimization problems. The		-
	in linear programming.		5
NI-LSM2	Statistical Modelling Lab	KZ	5
The topic of LSM2 i	s advanced multiple target tracking (MTT). This domain covers simultaneous tracking of multiple targets using radar under the present		eo tracking.
	We aim at the state-of-the-art filters, in particular the PHD (Probability Hypothesis Density) and PMBM (Poisson Multi-Bernoulli)		E
NI-MLP	Machine Learning in Practice earning methods to real projects in practice involves many other necessary tasks - from understanding the intentions of the client to, ide	Z,ZK allv. technical impl	5 ementation.
	students through all phases of a project according to the standard CRISP-DM methodology, not only theoretically but also practically

NI-SEP	World Economy and Business	Z,ZK	4
This course is	presented in Czech. However, there is an English variant in the program Informatics (N1801 / 4793). The course introduces students of	of technical universi	ty to the
international bus	iness. It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about di	ferent religions and	cultures,
necessary for doin	g business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed fo	r the right investme	nt decision.
Seminars help t	o improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course	BIE-SEP as a prer	requisite.
NI-SYP	Parsing and Compilers	Z,ZK	5
	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	1 1	-
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		

NI-SZ1	Knowledge Engineering Seminar Master I	Z	4
	r you will present a research paper from a top institute / research group to your peers. You will learn what is being cooked in top research

NI-TKA	Category Theory	Z,ZK	4
NI-TNN	Theory of Neural Networks	Z,ZK	5
	tudy neural networks from the point of view of the theory of function approximation and from the point of view of probability theory. At	·	-
pertaining to artific	ial neural Networks, such as neurons and connections between them, types of neurons from the point of view of signal transmission,	network topology,	somatic and
	s, network training, and the role of time in neural networks. In connection with network topology, we get acquainted with its transforma		
	n with somatic and synaptic mappings, with their composition into mappings computed by the Network, Finally in connection with train		
	ining and to the fact that training is actually a specific optimization task, recalling the most typical objective functions and the most im		
	I network training. We will see the meaninig of all these concepts in the context of common kinds of forward neural networks. Within the rks, we first notice the connection of neural networks to expressing functions of many variables using functions of fewer variables (Kol		
	ds, we will see how the universal approximation capacity of neural networks can be mathematically formalized as the sets of mappings	-	
,	portant Banach spaces of functions, in particular in the spaces of continuous functions, spaces of functions integrable with respect to		
functions with con	tinuous derivatives, and Sobolev spaces. Within the topic probabilistic approach, we first get acquainted with training based on expect	ation and training	based on a
random sample, ar	d with probabilistic assumptions about training data with which those two kinds of neural networks can be employed. We will see how i	t is possible to get	an estimate
	al expectancy of network outputs conditioned by its inputs using the expectancy based learning. We recall the strong and the weak law	-	-
-	n analogy of the strong law of large numbers for neural networks and with the assumptions for its validity. Finally, we recall the central	-	-
with its analogy	for neural networks, with the assumptions for its validity and with the hypothesis tests based on it. We will see how those tests can be	employed to sear	ch for the
	topology of the network.	Z	4

NI-ZS30	Master internship abroad for 30 credits	Z	30				
The course is prez	The course is prezented in chzech language. Each student can once within his / her master's degree have a foreign internship at a foreign university or other foreign scientific and/or						
research institution	Before the internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provid	le evidence of the	professional				
content and extent	of the internship. Auxiliary courses MI-ZS10, MI-ZS20, MI-ZS30 are used used for the evidence and evaluation of the internship in IS KO	S. Every 10 credits	correspond				
to 4 weeks of full-t	ime employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This an	nount can be divid	ed into two				
	subjects if the internship exceeds the academic year's dead-line.						
NIE-BLO	Blockchain	Z,ZK	5				
Students will under	stand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platform	ns. They will be ab	e to design,				
code and deploy a	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places a	an increased emph	asis on the				
relationship betwe	en blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the	students for imple	menting or				
	supervising implementation of blockchain-based solutions in both academia and business.						
NIE-PDL	Practical Deep Learning	KZ	5				
This course is des	igned to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine lea	rning framework.	Throughout				
the course, student	s will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such a	as computer vision	and natural				
	language processing.						
NIE-PML	Personalized Machine Learning	Z,ZK	5				
Personalized mad	hine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristic	s and behaviors of	individual				
entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal interests, its principles can be applied							
to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theoretical, algorithmic, and practical							
perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial communities.							
PI-SCN	Seminars on Digital Design	ZK	4				

This subject deals with problems of realization and implementation of digital circuits - both combinational and sequential. Basic means of description of digital circuits and basic logic synthesis and optimization algorithms are described. Basics of EDA (Electronic Design Automation) systems are given, together with combinatorial problems emerging in EDA.
