## Recomended pass through the study plan

## Name of the pass: Master specialization Web Engineering, in Czech, 2020

Faculty/Institute/Others:

Department:

Pass through the study plan: Master specialization Web Engineering, in Czech, 2020

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika

Type of study: Follow-up master full-time

Note on the pass: Jako volitelné p edm ty lze zapisovat povinné p edm ty sousedních specializací.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

#### Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members)  Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
NI-KOP	Combinatorial Optimization  Jan Schmidt, Ji í Vysko il, Petr Fišer Jan Schmidt Jan Schmidt (Gar.)	Z,ZK	6	2P+2C	Z	PP
NI-MPI	Mathematics for Informatics Št pán Starosta, Jan Sp vák Št pán Starosta Št pán Starosta (Gar.)	Z,ZK	7	3P+2C	Z	PP
NI-AM1	Middleware Architectures 1 Tomáš Vitvar, Jaroslav Kucha Jaroslav Kucha Tomáš Vitvar (Gar.)	Z,ZK	5	2P+1C	Z	PS
NI-VMM	Retrieval from Multimedia Tomáš Skopal, Ji í Novák <b>Jaroslav Kucha</b> Tomáš Skopal (Gar.)	Z,ZK	5	2P+1C	Z	PS
NI-V.2021	ist volitelné magisterské p edm ty NI-AOA,NI-ATH, (see the list of groups below)	Min. cours. 0 Max. cours. 79	Min/Max 0/366			V

#### Number of semester: 2

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
NI-PDP	Parallel and Distributed Programming Pavel Tvrdík Pavel Tvrdík Pavel Tvrdík (Gar.)	Z,ZK	6	2P+2C	L	PP

multiagent systems and other concepts the algorithmic point of view is gaining attention. In addition to existential questions we study the problems of efficient computation of various solution concepts. In this course we introduce the basics of game theory of many players, solution concept (usually equilibria) and methods of their computation. NI-BPS Wireless Computer Networks Z.ZK 4 Students will learn about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad-hoc networks, multicast and broadcast mechanisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowledge of security mechanisms for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitable tools NI-CCC Creative Coding and Computational Art Students work on practical tasks, get acquainted with creative and yet proven methods of visualizing various types of data. The course freely follows the basic graphics courses (MGA, BLE,) and introduces students to suitable visualization methods for traditional as well as for open data. It combines well-known visualization techniques with artistic methods using modern technologies. The aim is to create an interesting visualization project. It is planned to work closely with IPR CAMP (Center of Architecture and Metropolitan Planning) and IIM (Institute of Intermedia FEL). NI-CPX Complexity Theory Z,ZK 5 Students will learn about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the theory concerning practical (in)tractability of difficult problems. NI-CTF Capture The Flag ΚZ 4 The course is designed to introduce students to CTF competitions and let them gain practical experience in the field of cyber security. NI-DDM Distributed Data Mining Course focuses on state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands on experience with large scale data processing framework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations and will be capable to propose approaches to parallelize other algorithms. The course is prezented in czech language. Web Data Mining Students will learn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain an overview of Web mining techniques for Web crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overview of most recent developments in the field of social web and recommendation systems. Digital drawing The course will introduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, perspective and color theory, which they will practically apply in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course is fit for anyone who wants to practice or learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practice gained knowledge NI-DIP Diploma Thesis 30 NI-DNP Z.ZK Advanced NET Students will acquire an overview of platform .NET and will gain knowledge about technologies ASP.NET Core, Entity Framework Core, .NET MAUI (WPF, UWP), Blazor and also will get notions of Azure DevOps and GIT. Students will get practical experience in semestral work where they will create a client-server application utilizing technologies ASP.NET Core, Entity Framework Core and (Blazor, .NET MAUI or WPF) and also Azure DevOps and GIT. NI-DPH Game Design Z.ZK The course complements the NI-APH (Architecture of Computer Games) and BI-VHS (Virtual gaming worlds) course, while focusing primarily on game design. It is intended for people interested in deeper knowledge of the principles used for games design, such as: level design, gameplay design, character design, game mechanics design, storytelling, and game development cycle. The students will get an overview of game development from the designer's perspective, from theoretical concepts to practical implementation applied to semestral projects. NI-DSW Design Sprint Ζ 2 Students will work on projects using the Design Sprint method, developed by Google. THanks to this method the teams are able to go from idea to validated prototype in 5 days. During the course the students will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting with research and finishing with testing the prototypes (plus final presentation). NI-DVG Introduction to Discrete and Computational Geometry 7.7K 5 The course intends to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with the most fundamental notions of this discipline, and to be able to solve simple algorithmic problems with a geometric component. NI-DZO Digital Image Processing Z,ZK This course presents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical algorithms that are both easy to implement and have an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is also valuable outside the domain of digital image processing. This course will introduce algorithms solving the following practical applications; edge-aware editing, tone mapping, HDR compression, de-blurring in frequency domain, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conversion, context enhancement, interactive as-rigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, adding depth, alpha matting. NI-EDW Enterprise Data Warehouse Systems The Enterprise Data Warehouses course focuses on the area of business intelligence. Students will be introduced to business intelligence methods and will gain practical knowledge not only in designing warehouses and various architectures, but also their deployment and maintenance. This course also includes an introduction to the area of reporting and data visualization. NI-ESC ΚZ **Experimental Project Course** "The Design Project course offers a holistic exploration of the design process, providing students with a well-rounded understanding of the principles, methodologies, and tools used in designing technology-driven solutions that are user-centric and industry-relevant. Throughout the semester, students will work on real-world design projects, collaborate with industry experts, and learn to integrate theory with practical application. Through a hands-on, project-based learning approach, students will develop their skills in user-centered design and user experience evaluation, as well as gain experience working in a team to design and prototype a functional solution. NI-FMT Finite model theory The aim of the course is to introduce students to the basics of finite model theory. The original motivation is the questions expressibility and verifiability of logical properties of database systems. Since its inception in the 1970s, the course has evolved rapidly and touched on many other areas of theoretical computer science, such as descriptive complexity theory, the Constraint Satisfaction Problem (CSP), the theory of algorithmic meta-theorems and combinatorics. NI-GLR Games and reinforcement learning Z,ZK 4 The field of reinforcement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelligence. This course is intended to give you both theoretical and practical background so you can participate in related research activities. Presented in English. NI-GNN Graph Neural Networks Z.ZK The course introduces students to advanced artificial intelligence techniques for working with graphs. Lectures will focus on the latest graph neural networks for creating vector representations of nodes, edges and entire graphs. The techniques discussed cover various types of graphs, including time-varying graphs. The last part of the course also covers graph generation and interpretability of graph neural networks. In the exercises, students will try out selected techniques and problems NI-GOL ΚZ Programming of distributed systems in GO

NI-GRI	Grid Computing  Grid computing and gain knowledge about the world-wide network and computing infrastructure.	Z,ZK	5
NI-HCM	Mind Hacking	ZK	5
_	is an emerging discipline that is closely related to cyber security. While the domain of cyber security is the protection of networks, info	ı	
the domain of cog	nitive security is the protection of the human mind from intentional and unintentional digital manipulation. The topic of cognitive security	ty is growing in imp	ortance in
the context of inform	mation warfare, increasing digital dependence and the development of artificial intelligence, where these phenomena from the Internet	environment have r	eal societal
	impacts such as disruption of social cohesion, threats to democracy or war.		
NI-HMI2	History of Mathematics and Informatics	ZK	3

NI-MOP Modern Object-Oriented Programming in Pharo	KZ	4
Object-oriented programming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where		
s used to build complex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skil of object systems in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development		
addition to deepening object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work		
technologies in terms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involve		
NI-MPI Mathematics for Informatics	Z,ZK	7
The course comprises topics from general algebra with focus on finite structures used in computer science. It includes topics from multi-variate analysis	1 '	tion and
multi-variate integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The last to	pic includes selected	I numerical
algorithm and their stability analysis. The topics are completed with demonstration of applications in computer science. The course focuses on clear product of the course focus of the course focus on clear product of the course focus on clear product of the course focus of the course focus on clear product of the course focus on clear	esentation and argur	mentation.
NI-MPL Managerial Psychology	ZK	2
NI-MPR Master Project	Z	7
1. At the beginning of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial t		
during the semester. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end		
supervisor enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut.cz		
completed and signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the FT top is rather general, the immediate tasks the supervisor assigns to the student for the upcoming semester should aim at fine-tuning the FT topic so that		
approvable at the end of the semester.	the FFF will be comp	Sicio ana

Mathematical semantics of programming languages. Data types as continuous lattices, Scott topology. Procedures as continuous mappings. The Scott	1 ' 1	
Introduction to category theory.		
NI-MZI Mathematics for data science	Z,ZK	4
n this course, students are introduced to those fields of mathematics that are necessary for understanding standard methods and algorithms used in	lata science. The stu	died topics
include mainly: linear algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princlude	ciple, gradient metho	ods) and
selected notions from probability theory and statistics.		
NI-NLM Neural Language Models	Z	5
n this course, students will learn the technical foundations of the Transformer architecture as well as the practical aspects of using language models. The	•	is to teach
students how to use language models to solve problems, make informed risk assessments, and work critically with the scientific		4
NI-NMS   Neural Networks, Machine Learning and Randomness	Z,ZK	4
Stochastic methods, i.e. methods based on randomness, are extremely important for the construction and training of neural networks as well as a nur models. The course "Neural networks, machine learning and randomness" will discuss in sufficient depth a number of specific types of neural networks.		- 1
randomness, as well as a number of specific stochastic methods for neural networks and machine learning. In the final two topics, it explains the general	•	
neural networks and shows that, in addition to the use of randomness in neural networks and machine learning, machine learning models, including n		
of the most important applications of randomness stochastic optimization methods, which include e.g. popular evolutionary alg	orithms.	
NI-NMU New media in art and design	ZK	3
The course introduces students to the issue of using new media in artistic and design work. Key topics are moving image, internet, computer game a		-
familiarize the student with the largest possible range of creative approaches in new media. The subject emphasizes dialogue with students, especially	in lectures devoted	to specific
art projects.	7 716	
NI-OLI Linux Drivers	Z,ZK	4
The Linux operating system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining princrease the variability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development.		
course provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practi		ino. The
NI-PAM Efficient Preprocessing and Parameterized Algorithms	Z,ZK	4
There are many optimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often neces	1 1	
exactly in practice. We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often or	ie can find a commor	n property
parameter) of the inputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity expon	entially in this (small)	parameter
and polynomially in the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial t		
which is not possible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solut	\ \ \ \ \ \ \ \ \ \	resent a

NI-TNN	Theory of Neural Networks	Z,ZK	5
	study neural networks from the point of view of the theory of function approximation and from the point of view of probability theory. A	1 '	_
	ial neural Networks, such as neurons and connections between them, types of neurons from the point of view of signal transmission,		
	s, network training, and the role of time in neural networks. In connection with network topology, we get acquainted with its transform		
	in with somatic and synaptic mappings, with their composition into mappings computed by the Network, Finally in connection with tra		
	aining and to the fact that training is actually a specific optimization task, recalling the most typical objective functions and the most in		
•	al network training. We will see the meaninig of all these concepts in the context of common kinds of forward neural networks. Within th		
	rks, we first notice the connection of neural networks to expressing functions of many variables using functions of fewer variables (Ki		
	ds, we will see how the universal approximation capacity of neural networks can be mathematically formalized as the sets of mapping	_	
being dense in in	nportant Banach spaces of functions, in particular in the spaces of continuous functions, spaces of functions integrable with respect	to a finite measure,	spaces of
functions with con	tinuous derivatives, and Sobolev spaces. Within the topic probabilistic approach, we first get acquainted with training based on expe-	ctation and training	based on a
random sample, ar	nd with probabilistic assumptions about training data with which those two kinds of neural networks can be employed. We will see how	it is possible to get	an estimate
of the condition	al expectancy of network outputs conditioned by its inputs using the expectancy based learning. We recall the strong and the weak la	aw of large numbers	s and get
acquainted with a	an analogy of the strong law of large numbers for neural networks and with the assumptions for its validity. Finally, we recall the centr	al limit theorem, get	acquinted
with its analogy	for neural networks, with the assumptions for its validity and with the hypothesis tests based on it. We will see how those tests can b	e employed to sear	ch for the
	topology of the network.		
NI-TS1	Theoretical Seminar Master I	Z	4
	ar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classi		
are treated individu	ually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a	work with scientific	papers and
	other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.

NI-TVR	Virtual Reality Technology	Z,ZK	3
	stroduced to the basic concepts of virtual reality. Techniques for displaying virtual worlds (CAVE, HMD,) and the possibilities of concepting over tradition) will be discussed. Furthermore, the concepts of mixed and augmented reality will be introduced. Finally, were set	•	
liacking, nand lia	acking, eye tracking) will be discussed. Furthermore, the concepts of mixed and augmented reality will be introduced. Finally, ways of reality will be presented.	using virtual and a	ugmenteu
NI-VCC		Z.ZK	5
	Virtualization and Cloud Computing in knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	, ,	l
-	in knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies are irtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to effici	_	-
-	arameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effec		-
	mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills		-
	and development tools (Continuous integration and development).		
NI-VGA	Video Games Architecture	Z,ZK	5
	s s a wide range of topics, procedures and methodologies related to the development of computer games - from a technical point of vi	1	design and
philosophical point	of view. In the lectures, students will be guided through the history of development, the structure of game engines, component and f	unctional architectu	re typical of
game developmen	t, physics, graphics, artificial intelligence and multiplayer. The exercises will then cover selected technological topics in greater detail,	including ways of in	nplementing
	some game mechanics, in the form of practical demonstrations.		
NI-VMM	Retrieval from Multimedia	Z,ZK	5
	s general knowledge regarding interfaces of portals providing multimedia content, the principles of similarity search, the methods of fea	1	n multimedia
	objects, indexing, and structure of distributed search engines.		
NI-VOL	Elections	Z,ZK	5
	We will cover the basics of (committee) elections and, in general, opinion aggregation.		ll en
NI-VPR	Research Project	Z	5
	Student obtains the credits for published scientific outputs. The details are at https://courses.fit.cvut.cz/NI-VPR/en.	1	
NI-VSM	Selected statistical Methods	Z,ZK	7
	the student through advanced probabilistic and statistical methods used in information technology praxis. Particularly it deals with m		listribution,
	tropy in coding theory, hypothesis testing (T-tests, goodness of fit tests, independence test). Second part of the course deals with rar		
	Markov chains. The high point of the course is the Queuing theory and its application in networks.		
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.		ļ
NI-ZS10	Master internship abroad for 10 credits	Z	10
	once within his / her master's degree have a foreign internship at a foreign university or other foreign scientific and/or research instit	ution. Before the int	ernship the
Dean of the FIT, or	the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content and e	xtent of the internsh	nip. Auxiliary
courses MI-ZS10,	MI-ZS20, MI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits correspond to 4 week	ks of full-time emplo	syment with
a foreign instituti	on. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided into two subjects	if the internship ex	ceeds the
	academic year's dead-line.		I
NI-ZS20	Master internship abroad for 20 credits	Z	20

	academic year's dead-line.		

NI-ZS30 Master internship abroad for 30 credits Ζ 30 The course is prezented in chzech language. Each student can once within his / her master's degree have a foreign internship at a foreign university or other foreign scientific and/or research institution. Before the internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the professional content and extent of the internship. Auxiliary courses MI-ZS10, MI-ZS20, MI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits correspond to 4 weeks of full-time employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided into two subjects if the internship exceeds the academic year's dead-line. NIE-BLO Z,ZK Blockchain Students will understand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platforms. They will be able to design, code and deploy a secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places an increased emphasis on the relationship between blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the students for implementing or supervising implementation of blockchain-based solutions in both academia and business. NIE-PDL Practical Deep Learning ΚZ This course is designed to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine learning framework. Throughout the course, students will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such as computer vision and natural language processing. NIE-PML Personalized Machine Learning Z,ZK Personalized machine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristics and behaviors of individual entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal interests, its principles can be applied to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theoretical, algorithmic, and practical perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial communities. Seminars on Digital Design

This subject deals with problems of realization and implementation of digital circuits - both combinational and sequential. Basic means of description of digital circuits and basic logic synthesis and optimization algorithms are described. Basics of EDA (Electronic Design Automation) systems are given, together with combinatorial problems emerging in EDA.
