Recomended pass through the study plan

Name of the pass: Bachelor specialization Computer Engineering, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Computer Engineering, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assessment, Z - assessment, ZK - examination, L - summer semester, Z - winter semester

Number of semester:	1

Academic Achievement inguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both t	Z - students are due	
tests with the succes	ss rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind class of the term.	ividual teachers du	ring the first

<b></b>		r	r
BI-APJ	Aplication Programming in Java	Z,ZK	4
	This course is presented in Czech. Advanced technologies in Java.		
BI-APS.21	Architectures of Computer Systems	Z,ZK	5
	rn the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec		-
	on processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the princ	-	
,	ar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	•	
program. The cours	se further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory cohe	rence and consiste	ency in such
	systems.		
BI-ARD	Interactive applications on Arduino	KZ	4
The subject is desig	gned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applicat	ions for modern pro	ogrammable
kits and control va	aried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded s	vstems, i.e. to see	the results
	ay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	-	
	Software Engineering students.		
		7 71/	4
BI-AVI.21	Algorithms visually	Z,ZK	4
	ements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer so		-
knowledge present	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&l	t;http://www.algovis	sion.org>)
	that make understanding the principles of algorithms easy.		
BI-BAP.21	Bachelor Thesis	Z	14
BI-BEK.21	Secure Code	Z,ZK	5
			-
	earn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting fa		-
	s gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every		
	vileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing		
security and	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the	e defense against	them.
BI-BLE	Blender	Z,ZK	4
The course exten	nds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those i		aphics and
	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	-	
BI-BPR.21	Bachelor project	7	1
-	ng of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the		
	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at t		
-	r enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvu		-
The completed and	d signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top	pic of the work that	t the student
has reserved is for	mulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assignment of the semester should be aimed primarily at fine-tuning the assignment of the semester should be aimed primarily at fine-tuning the assignment of the semester should be at the semester sho	gnment so that the	assignment
	can be supplemented and approved at the end of the semester.		
BI-CCN	Compiler Construction	Z.ZK	5
	luctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	1 '	-
		or complicity for st	
undorete	and the design and implementation of programming languages. Seeing and actually understanding self compilation is the overarching	thome of the class	
	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		s.

BI-MA1.21	Mathematical Analysis 1	Z,ZK	5
-	se by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers. T of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functions of the set of the		-
	ot-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and		
	ssue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical descripti	-	-
BI-MA2.21	Mathematical Analysis 2	Z,ZK	6
	tes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will learr	I ' I	-
	n method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to the	-	
	escribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, an	-	-
theorem. Finally,	we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and H	lessian matrix, we	study the
analytical method of	f localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ	ration of multivariat	e functions.
BI-MIT	Mikrotik technologies	KZ	3
The main motivation	on of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are con	nmonly used by the	e small and
	vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the me	-	
and how to adminis	trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne	tworks concepts lik	e protocols
	and technologies of the data-link, network and transport layer of the OSI model.		

BI-MMP	Multimedia team project	KZ	4
	This course is presented in Czech.		
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5
	ed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa ide and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE		
includes both PC s	drivers, simple application development, and APIs of selected devices.	devices, Linux an	
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5
-	urse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augm	nented reality, visua	
high resolution disp	lays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentione	ed technologies, na	mely fractal
BI-OPT	and procedural visualization, scientific data visualization, and 3D model scanning. Introduction to Optical Networks	Z,ZK	4
	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss	·	-
	technology and on their solutions. The course will include the history of optical communications, an overview of passive components	•	
	sators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission system	,	
	e topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as ncy transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.		
	from practice.		
BI-ORL	Operations Research and Linear Programming	KZ	5
	o introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundar	•	
	nal research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (suc	-	-

	ead scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS moni		
-	and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS W	indows.	
BI-PA1.21	Programming and Algorithmics 1	Z,ZK	7
-	ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, structure and a structure for any structure f		-
statements, function	ons, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searchi with linked lists and trees.	ng, sorung, and ma	anipulating
BI-PA2.21	Programming and Algorithmics 2	Z,ZK	7
	instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, que		ray, list, set,
table). They lear	n these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e	e.g., template prog	ramming,
BI-PHP.1	copying/moving of objects, operator overloading, inheritance, polymorphism).	ΚZ	4
	Programing in PHP aught in Czech Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices a	·	-
	PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register f		
	register for this course in their 3rd semester of study.		
BI-PJP.21	Programming Languages and Compilers	Z,ZK	5
	asic compiling methods of programming languages. They are introduced to intermediate representations used in current compilers G ion of a translation of a text that conforms a given syntax, to a target code and also to create a compiler based on the specification. T		
	only a programming language but any text in a language generated by a given LL input grammar.		
BI-PJS.1	JavaScript Programming	KZ	4
	course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development		
recommended for s	tudents of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for th of study.	his course in their 4	th semester
BI-PJV	Programming in Java	Z,ZK	4
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	,	
BI-PKM	Introduction to mathematics	Z	4
	This course is presented in Czech.		
BI-PMA	Programming in Mathematica rking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm	Z,ZK	4
Students will be we	etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.	ing, rule-based pr	ogrammig,
BI-PNO.21	Practical Digital Design	KZ	5
-	verview of the contemporary digital design flow and learn practical skills to use synchronous design techniques. They understand the		
and implementation	on technologies FPGA and ASIC. Students demonstrate practical use of the design techniques in the course project using modern in	dustry-standard C	AD design
BI-PS2	tools. Programming in shell 2	Z,ZK	4
	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi		
	into shell and some other particular scripting languages and will get practical experience with shell script programming.		
BI-PSI.21	Computer Networks	Z,ZK	5
	ces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local r is will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw		
	actically verify configurations and management of network devices in the lab within the environment of the operating systems Linux a	-	Siudeniis
BI-PST.21	Probability and Statistics	Z,ZK	5
Students will learn	the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. T	hey will be able to	apply basic
	om variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction	•	
esumations of unk	nown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistical	nypomeses and d	etermining
	the statistical dependence of two or more random variables		
DI-QAP	the statistical dependence of two or more random variables. Quantum algorithms and programming	KZ	5
BI-QAP Course aims at givi	the statistical dependence of two or more random variables. Quantum algorithms and programming ng students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, o	KZ n which quantum te	5 echnologies
Course aims at givi are based, and alg	Quantum algorithms and programming ng students hands-on experience with quantum computers and their programming. BI-TZP.21	Technological Fundamentals of Computers	Z,ZK	5
	ainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer si		
	roduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to reduce a processor of the terminated what happened if it is not how to reduce a processor of the terminated what happened if it is not how to reduce a processor of the terminated what happened if it is not how to reduce a processor of the terminated what happened if it is not how to reduce a processor of the terminated what happened is the termina		
	num operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a con (in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.	iputer power suppr	y looks like
BI-ULI	Introduction to Linux	Z	2
	e familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become t	ı — ı	
	and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (te		
BI-UOS.21	Unix-like Operating Systems	KZ	5
Unix-like operating	systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fu	nctions of multiuse	r operating
	buters and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic propert		
	eads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of		
-	e to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting in		
BI-VAK.21	Selected Applications of Combinatorics o introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the bit		3
	tions to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic		
	ticipation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) info		
will select probler	ms to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimiz-	ation and more. Stu	udents will
	also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.		
BI-VES.21	Embedded Systems	Z,ZK	5
Students learn to d	lesign embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and embedd peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.	ed processors, the	ir integrated
BI-VHS	Virtual game worlds	ZK	4
	tudents to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current stud	I —·· I	
	/ the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. T	0	
	the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR device	ces.	
BI-VMM	Selected Mathematical Methods	Z,ZK	4
, v	s with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then ad		
	rr, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the we be linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is domenstrated with interaction		le examine
	he linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interestin	KZ	4
BI-VR1	Virtual reality I ual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of		
	es on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves con		
	and shared social activities.		
BI-VR2	Virtual reality II	KZ	3
Continuation of the	course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The obje	ctive is to develop a	applications
	for computer science and gamification in various social metaverse and desktop engines.		
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4
-	led system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of t		
	robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion contri avigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get p	-	
	technologies.		
BI-ZNF	PHP Framework Nette - basics	KZ	3
	the basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech po		-
	knowledge should serve for the efficient creation of a web backend in PHP language.		
BI-ZPI	Process engineering	KZ	4
	fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of p	-	-
	used notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of busi		-
	ole of process engineering for information systems development is discussed as well as its importance in the overall context of inform an enterprise.	auon anu business	sualegy of
BI-ZRS.21	Basics of System Control	Z,ZK	5
	an introduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will focus		
-	ering and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, description	-	-
basic linear dynam	ic systems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of creat	ing a description of	the system
model, the basic	linear dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also given	to sensors and ac	tuators in

control loops, issues of stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industrial implementation of continuous and digital controllers and PLC control.

BI-ZS10 Bachelor internship abroad for 10 credits		
Each student can once within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the profess internship. Auxiliary courses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits co	ional content and ex prrespond to 4 weeks	tent of the of full-time
employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided in exceeds the academic year's dead-line.		einternsnip

BI-ZS30 Bachelor internship abroad for 30 credits	Z	30
Each student can once within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or i	research institution.	Before the
internship the Dean of the FIT, or the vice-dean for study affairs assesses the professional content. The student must provide evidence of the profess	ional content and ex	tent of the
internship. Auxiliary courses BI-ZS10, BI-ZS20, BI-ZS30 are used used for the evidence and evaluation of the internship in IS KOS. Every 10 credits co	-	
employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This amount can be divided in	nto two subjects if the	e internship
exceeds the academic year's dead-line.		
BI-ZUM.21 Artificial Intelligence Fundamentals	Z,ZK	5
Basic course on introduction to artificial intelligence with emphasis on symbolic techniques. The design of an intelligent agent and the techniques need		
especially at the decision-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but also		ntity, such
as a virtual assistant or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art	during the course.	
BI-ZWU Introduction to Web and User Interfaces	Z,ZK	4
This course is presented in Czech.		
BIE-CSI Introduction to Computer Science	Z	2
This is an introductory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other	fields but interested i	n computer
science, high-school students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The	goal of the class is to	introduce
and relate basic principles of computer science for students to understand, early on, what computer science is, why things such as high-level program	nming languages and	d tools are
done the way they are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer r	not just basic comput	er science
questions but also questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are intere-	ested in computer sc	ience more
than expected, or even less than before.		
BIE-DIF Differential equations	Z,ZK	5
This course provides a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential	solution methods like	separation
of variables. Key theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered v	vith methods like cha	racteristic
polynomial analysis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world applicati		
partial differential equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODE	Es and PDEs, includi	ng implicit
and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		
BIE-EEC English language external certificate	Z	4
The BIE-ECC course can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Englishing and the submission of a certificate certificate that demonstrates their proficiency in Englishing and the submission of a certificate certificate that demonstrates their proficiency in Englishing and the submission of a certificate certificate that demonstrates their proficiency in Englishing and the submission of a certificate certificate that demonstrates their proficiency in Englishing and the submission of a certificate certificate that demonstrates their proficiency in Englishing and the submission of a certificate certificate that demonstrates the submission of a certificate certificate that demonstrates the submission of a certificate certificate that demonstrates the submission of a certificate certificate certificate that demonstrates the submission of a certificate certificate that demonstrates the submission of a certificate certificate certificate that demonstrates the submission of a certificate certificate certificate that demonstrates the submission of a certificate certificate certificate that demonstrates the submission of a certificate certificate certificate that demonstrates the submission of a certificate certificate certificate that demonstrates the submission of a certificate certifi	glish comparable to o	r exceeding
the B2 level of the Common European Framework of Reference for Languages.

FIT-SEP	World Economy and Business	Z,ZK	4
This course is pre	esented in Czech. The course introduces students of technical university to the international business. It does that predominantly by co	I ' I	-
-	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as		
	nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of di		
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
FITE-EHD	Introduction to European Economic History	Z,ZK	3
	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco		
	s in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic		-
	pipe to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial instituti		
	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c	•	
	meetings will consist of a mixture of lecture and discussion.	0	,
NI-AFP	Applied Functional Programming	KZ	5
	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p	I I	
	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master		-
and not not not addy t	necessary competence of a software engineer: the theory and especially the practice.	ing the paradigin .	
NI-DDM	Distributed Data Mining	KZ	4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of	I I	
	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	-	-
uata processing in	approaches to parallelize other algorithms. The course is prezented in czech language.	ind will be capable	to propose
		7 71/	4
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.		
NI-DZO	Digital Image Processing	Z,ZK	4
	ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg		-
-	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is als		
	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR		-
frequency domain,	, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv	ersion, context enl	hancement,
interactive as-ri	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, ac	dding depth, alpha	matting.
NI-IAM	Internet and Multimedia	Z,ZK	4
The NI-IAM cours	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	uisition of AV signa	als (input),
presentation of AV	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u	ise case scenarios	of real-time
audiovisual transm	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effe	ect of various comp	ponents on
the quality and late	ency of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the	e scene up to the p	presentation
	for audience.		
NI-LSM	Statistical Modelling Lab	KZ	5
The subject is ori	iented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p	out on the effective	use of the
-	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, and		
	At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi	-	
		S).

NI-TSP	Testing and Reliability	Z,ZK	5
Students will gain k	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prej	, pare a test set witl	h the help of
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equi	pment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will gain	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. Th	ey will get
acquainted with vir	tualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	ently operate and o	optimize the
performance par	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effection	ive technology tod	ay for the
nanagement of cor	nplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in	n the use of moder	n integratio
	and development tools (Continuous integration and development).		
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.
