Recomended pass through the study plan

Name of the pass: Bachelor specialization Management Informatics, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Management Informatics, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assessment, Z - assessment, ZK - examination, L - summer semester, Z - winter semester

Number of semester:	1

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the cours	e corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieveme	nt - students are due	to: -Take ar
active part in the langu	age instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in bot	h the midterm and the	e final term
tests with the success ra	tte set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by	ndividual teachers du	iring the firs
	class of the term.		
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduced	to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of fini	te automata, regular e	expressions
and regular grammars, c	context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know	the hierarchy of forma	al languages
and they un	derstand the relationships between formal languages and automata. They are introduced to the Turing machine and complex	ity classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
BI-ACM2	Programming Practices 2	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
BI-ACM3	Programming Practices 3	KZ	5
I	This is a selective course for preparing talented student for representation in international programming contests.	1	1
BI-ACM4	Programming Practices 4	KZ	5
I	This is a selective course for preparing talented student for representation in international programming contests.	I	1
BI-ADW.1	Windows Administration	Z,ZK	4
1	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
The course covers the	basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing	curriculum. It links an	d partially
develops the knowledge	e from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating t	he time and space co	omplexity of
algorithm	s. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the a	symptotic notation.	
BI-ALO	Algebra and Logic	Z,ZK	4
	The course extends and deepens the study of topics touched upon in the basic course in logic.		
BI-AND.21	Programming for the Android Operating System	KZ	4
	This course is presented in Czech.		
BI-ANG	English Language, Internal Certificate	ZK	2
	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-	ANG	
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-ANGK	English language, contact preparation for the B2 level exam	Z	2
The content of the cours	e corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieveme	nt - students are due	to: -Take ar
active part in the langu	age instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in bot	h the midterm and the	e final term
tests with the success ra	te set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by	ndividual teachers du	iring the firs
	class of the term.		
	Aplication Programming in Java	Z,ZK	4
BI-APJ			

BI-ARD	Interactive applications on Arduino	KZ	4
,	igned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applicat		0
	varied peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded s	-	
not only on disp	lay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	is suitable even to	r Web and
	Software Engineering students.	7 71/	4
BI-AVI.21	Algorithms visually	Z,ZK	4
	ements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer so ted in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&		
anomedge presen	that make understanding the principles of algorithms easy.	t,http://www.aigovi	Jon.orgae
BI-BAP.21	Bachelor Thesis	Z	14
BI-BLE	Blender	Z,ZK	4
	Index and Graphics Applications) course. It is intended for those i	1 '	1 .
	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	-	-
BI-BPR.21	Bachelor project	Z	1
	ng of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	-	∣ ve/shewi
-	e semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at t		
-	or enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvu		
The completed an	nd signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top	pic of the work that	t the stude
nas reserved is fo	rmulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assign	gnment so that the	assignme
	can be supplemented and approved at the end of the semester.		_
BI-CCN	Compiler Construction	Z,ZK	5
This is an intro	ductory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	of compilers for st	udents to
underst	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	theme of the clas	.s.
BI-CS1	Programming in C#	KZ	4
-	purse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		
	ys, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def		-
constructors, met	hods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging	and exception pro	cessing, a
	well as work with files are emphasized.		
BI-CS2	C# language and data access	KZ	4
	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros	-	
	cts used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current tech	-	
	erying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L	•	
	L). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u of the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Mode		-
(ORM). This part	(XML description).	, Storage Model a	па маррі
BI-CS3	Language C# - design of web applications	KZ	4
	be introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of	1	1 .
	on thisplatform. They will learn to create WebAPI and to use it by client programs.	si the development	possibiliti
BI-DBS.21	Database Systems	Z.ZK	5
	troduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear	1 '	-
	/ constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the	-	
ts theoretical foun	dation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda	imental concepts o	f transacti
processing, contr	olling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced	to special ways of	storing da
in relational datab	bases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of datal	base systems, deb	ougging ar
	optimizing database applications, distributed database systems, data stores.		1
BI-DML.21	Discrete Mathematics and Logic	Z,ZK	5
•	acquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fro		•
Special attention i	is paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours	e also lays down t	he basics
	combinatorics and number theory, with emphasis on modular arithmetics.		T
BI-EHD	Introduction to European Economic History	Z,ZK	3
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		т
BI-EJA	Enterprise Java	Z,ZK	4
The course is on	advanced technologies in the Java programming language. The focus is on technologies for development of enterprise information system	stems which are c	onnected
	a database and are accessed through the web interface.	 	T
BI-EJK	Enterprise Java and Kotlin	Z,ZK	4
The course is on a	advanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise information of the second se	tion systems with r	nicroserv
	architecture, that can be deployed to the cloud.		.
BI-EP1.24	Effective programming 1	KZ	4
	The course is taught in Czech.		т
BI-EP2	Efficient Programming 2	KZ	4
Continuation of E	Efficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving indivi	dual problems are	discusse
	with the aim to choose the best one and avoid implementation errors.		T
BI-EPP.21	Economic Business Processes	Z,ZK	5
	urse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and	-	
	ironment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the		
establishment of t	the company, through the management of property and capital structure, financing of the company, determining the cost function of the	e company and lat	oor costs,
	evaluating the financial health of the company and its eventual rehabilitation or termination.		-
BI-FBI.21	Financial Business Intelligence	Z,ZK	5
	urse is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for business	-	-
	ors for comparison with other companies and management decision process at the tactical and strategic level. The second view is mar	-	-
	gement and prediction of business development. Management accounting allows monitoring of the financial status and performance of l		
	ods, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital an		

assess options related to future business decisions. The principles of management accounting, described in this course, are the basis of Business Interior information systems, decision support systems, and other knowledge-oriented systems.	elligence modules i	n business
BI-FEM.21 Fundamentals of Economics	Z,ZK	5
The course allows the students to discover basics of economic theory, which will then be used in subsequent courses of economics and management.		al overview
of fundamental microeconomic and macroeconomic topics.		
BI-FMU Financial and Management Accounting	Z,ZK	5
The aim of the course is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa	articular accounting	operations,
operations in accounts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification		
of economic operations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manage	ement accounting a	re base of
Business Inteligence moduls in Business information systems.	1/7	0
BI-GIT Version control system GIT Students will be introduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract	KZ	2
even the implementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git		-
BI-GIT.21 SW Development Technologies	Z	3
This course is aimed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students t		-
from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		g
BI-HAM HW accelerated network traffic monitoring	KZ	4
This course introduces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The	ne monitoring and a	analysis of
network traffic are mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s		
for analysis). The goals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traff	fic on a hardware a	nd software
level and to develop their practical abilities in this field.		_
BI-HAS Human Aspects in Cryptography and Security	Z,ZK	5
This course is for students interested not only in technical scope of computer science, but also in making products usable - for users and for developer use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.	s. Students of this	course can
BI-HMI History of Mathematics and Informatics	Z,ZK	3
This course is presented in Czech.	Ζ,ΖΝ	5
BI-IOS Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
This course is presented in Czech.	112	'
BI-KAB.21 Cryptography and Security	Z,ZK	5
Students will understand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	1 1	-
certificates in systems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in app	lications. Within lab	os, students
will gain practical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce	dures of cryptanaly	/sis.
BI-KOM.21 Conceptual Modelling	Z,ZK	5
The course is focused on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te		-
categorize and specify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struct	turai modelind in tr	
notation Next they learn how to express business rules and constraints using the OCL language and foundations of OW/L/RDE semantic data represent	-

BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5
The course is focu	sed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa	I serial bus (USB).	The course
includes both PC	side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE	devices, Linux an	d Windows
	drivers, simple application development, and APIs of selected devices.		
BI-MVT.21	Modern Visualisation Technologies urse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augm	Z,ZK	5

BI-TDP.21	Documentation and Presentation	KZ	3
The course is focus	sed on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically fi	nal university these	es. Students
learn to create text	of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically prese	nt it in front of clas	smates and
the teacher. The	course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14	days of teaching.	Nithin the
	exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.		
BI-TEX	TeX and Typography	Z,ZK	4
This course is pres	ented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of the	course focuses on	typographic
	rules.		
BI-TIS.21	Information Systems	Z,ZK	5
The goal of this co	ourse is to familiarise students with the information systems topic and information systems implementation principles. During the cour	se, students are inf	troduced to
	xisting types of systems and their usage in specific industry segments. Students are familiarised with the CRM, ERP, MRP and other		-

BI-TS4	Theoretical Seminar IV	Z	4
	ar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic		
are treated individu	ally and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a state of the course is a	work with scientific	papers and
	other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.		
BI-TZP.21	Technological Fundamentals of Computers	Z,ZK	5
	ainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer s		
-	roduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to redu		
innus to the maxin	num operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a con (in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.	iputer power suppr	y looks like
		7	<u> </u>
BI-ULI	Introduction to Linux	. – .	2
Students become	familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (te		commanus
BI-UOS.21	Unix-like Operating Systems	KZ	5
	g systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fu outers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic proper		
	eads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of		-
	e to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting in		
-		Z	3
BI-VAK.21	Selected Applications of Combinatorics	I – I	-
	introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the b tions to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic		
	ticipation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) info		
	includents, we will locus on solving popular and easily formulated problems norm various areas of (not only incorrectar) includents, we will locus on solving popular and easily formulated problems norm various areas of (not only incorrectar) includents, by the only incorrectary incorectary incorrectary		
	also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.		
BI-VHS	Virtual game worlds	ZK	4
	tudents to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current stud	1 1	-
	the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. T		
	the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR device		,
BI-VMM	Selected Mathematical Methods	Z,ZK	4
	s with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then ad		-
-	r, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the w		
	he linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interestin		
BI-VR1	Virtual reality I	KZ	4
	ual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of	1 1	munication.
	es on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves con		
	and shared social activities.		
BI-VR2	Virtual reality II	KZ	3
	e course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The obje	1 1	
	for computer science and gamification in various social metaverse and desktop engines.	F	
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4
	ed system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of t	1 1	
-	robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion control		
interfaces, robot na	avigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get p	practical experience	e with these
	technologies.		

BI-ZNF	PHP Framework Nette - basics	KZ	3	
	the basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech po knowledge should serve for the efficient creation of a web backend in PHP language.		he resulting	
BI-ZPI	Process engineering	KZ	4	
	n fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of p	1 1		
	e used notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of bus	-	-	
CASE tools. The role of process engineering for information systems development is discussed as well as its importance in the overall context of information and business strategy of				
	an enterprise.			
BI-ZS10	Bachelor internship abroad for 10 credits	Z	10	
Each student car	n once within his / her bachelor's study programme have a foreign internship at a foreign university or other foreign scientific and/or re	search institution.	Before the

BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4	
	This course is presented in Czech.		I	
BIE-CSI	Introduction to Computer Science	Z	2	
	tory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fi	I – I		
	nool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The g		-	
and relate basic	principles of computer science for students to understand, early on, what computer science is, why things such as high-level program	ming languages an	d tools are	
done the way the	y are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer no	t just basic comput	ter science	
questions but also	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interest	sted in computer sc	cience more	
	than expected, or even less than before.			
BIE-DIF	Differential equations	Z,ZK	5	
This course provid	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential s	olution methods like	e separation	
	theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered with			
	ysis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world applicatio			
partial differentia	Il equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs	and PDEs, includi	ing implicit	
	and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.			
BIE-EEC	English language external certificate	Z	4	
The BIE-ECC cour	rse can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli	sh comparable to o	or exceeding	
	the B2 level of the Common European Framework of Reference for Languages.		0	
BIE-IMA2	Introduction to Mathematics 2	Z	2	
Students refresh a	and extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a	able to apply them I	in particular	
	examples.	7	0	
BIE-SEG	Systems Engineering story class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles of	Z	0 for students	
	cessor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After taking			
	e difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what co			
	parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.			
BIE-ZUM	Artificial Intelligence Fundamentals	Z,ZK	4	
	duced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic			
	Iti-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithm			
	be presented as well.		,,	
FI-TOP	Academic writing	Z	2	
	nportant and required part of research activity. It is not only about obtaining research results but also about applying them in the form	1 1		
-	be useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the cou	-	-	
	rticle, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting an			
else's article. The	course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester. De	ates will be determi	ined based	
	on the availability of enrolled students.			
FIT-ACM1	Programming Practices 1	KZ	5	
	This is a selective course for preparing talented student for representation in international programming contests.

FIT-SEP	World Economy and Business	Z,ZK	4
This course is pre	sented in Czech. The course introduces students of technical university to the international business. It does that predominantly by c	omparing individua	al countries
and key regions of	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as	indexes of econom	nic freedom,
	nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of d		
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
		7 71/	0
FITE-EHD	Introduction to European Economic History	Z,ZK	3
The course introdu	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco	nomy through the	description
of the key periods	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	history. From large	economic
area of Roman Em	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institut	ons is deciphered.	The course
does not cover de	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and o	organizations in his	tory. Class
	meetings will consist of a mixture of lecture and discussion.	0	,
		1/7	F
NI-AFP	Applied Functional Programming	KZ	5
	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p		-
the rise nowadays	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master	ing this paradigm I	becomes a
	necessary competence of a software engineer: the theory and especially the practice.		
NI-DDM	Distributed Data Mining	KZ	4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands (on experience with	large scale
	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a		-
			to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.		
NI-DZO	Digital Image Processing	Z,ZK	4
	ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg	· ·	-
			-
	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is also		
	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR	•	•
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv		
interactive as-ri	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, a	dding depth, alpha	matting.
NI-IAM	Internet and Multimedia	Z,ZK	4
	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	· · ·	1
		-	
	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u		
	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the eff		
the quality and late	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording th	e scene up to the p	presentation
	for audience.		
NI-LSM	Statistical Modelling Lab	ΚZ	5
	ented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p		-
-	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, an		
		-	properties.
	At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi		
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
Object-oriented pro	ogramming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where	its ability to natural	l abstraction
is used to build com	nplex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills	s of design and imp	lementation
of object systems	in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development n	eeds and areas of	interest. In
	ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of		
	rms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involven		
NI-MPL	Managerial Psychology	ZK	2
NI-MSI	Mathematical Structures in Computer Science	Z,ZK	4
	emantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scot	· ·	calculus.
	Introduction to category theory.		
NIOU		7 71/	Λ
NI-OLI	Linux Drivers	Z,ZK	4
· ·	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po	•	
increase the vari	ability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development	nt for master's stud	lents. The
со	urse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practic	al experience.	
NI-PDD	Data Preprocessing	Z,ZK	5
	repare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s	I ' I	1
lime series, etc., a	and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris	lics nom images o	r nom web
	pages.		
NI-PSD	Public Services Design	KZ	4
The course will intr	oduce students to specifics of UX, Service design and development for public sector. We will look into the design and development p	rocess from the pe	rspective of
suppliers (devs a	and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboratio	n with client repres	entatives.
	Course is aimed at students-designers as well as clients.		
NI-PSL		Z,ZK	4
	Programming in Scala	· · ·	1
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language featur		-
advance standard I	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	l libraries e.g. Play,	Cassandra,
	Scalaz, etc.		
NI-REV	Reverse Engineering	Z,ZK	5
	cquainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens bef		
-			
	will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated as a set of the course is dedicated as a set of the course is dedicated as a set of the course of the course is dedicated as a set of the course of the course is dedicated as a set of the course of t	-	
	tten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be di		
debuggers and de	ebugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer	malware scene. Th	ne tocus of
	the course is on the seminars, where students will solve practically oriented tasks from the real world.		

NI-SYP	Parsing and Compilers	Z,ZK	5
The module builds	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	arious variants and	applications
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		
NI-TSP	Testing and Reliability	Z,ZK	5
Students will gain	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre	pare a test set with	the help of
the intuitive path s	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equi	pment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will ga	in knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. The	ey will get
acquainted with vi	irtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	ently operate and c	ptimize the
performance pa	arameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect	ve technology tod	ay for the
management of co	mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in	n the use of moder	n integration
	and development tools (Continuous integration and development).		
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.	-
