## Recomended pass through the study plan

## Name of the pass: Bachelor specialization, Information Security, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization, Information Security, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatics

Type of study: Bachelor full-time

Note on the pass: In addition to purely elective courses, compulsory courses in neighboring specializations can also be enrolled here as electives. The BIE-ECC course can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in English comparable to or exceeding the B2 level of the Common European Framework of Reference for Languages.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

## List of courses of this pass:

Code	Name of the course C		Credits				
BI-SCE1	1 Computer Engineering Seminar I		4				
The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students							
are approached in	are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific						

articles and other professional literature and/or work	k in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher semester.	s. The topics are no	ew for each
BIE-3DT.1	3D Printing	KZ	4
Students learn to design three-dimensional objects	optimized for printing on a RepRap printer and the printing itself. They will be able to design objects, in 3D.	prepare for printin	g and print
BIE-AAG.21	Automata and Grammars	Z,ZK	5
	plementation principles of the following topics: construction, use and mutual transformations of finite a		
	construction and use of pushdown automata, hierarchy of formal languages, relationships between for able in designs of algorithms for searching in text, data compression, simple parsing and translation, i		
BIE-ADU.21	Unix Administration	Z,ZK	5
	operating system, with the administration of its basic subsystems and with the security principles. They theoretical and practical knowledge of user management and administration, of users access rights, f		
	access, and in the areas of system deployment and virtualization. In the labs, they will verify the kno specific examples from practice.	-	-
BIE-ADW.1	Windows Administration	Z.ZK	4
	Is of the Windows OS and acquire the skills to administrate the Windows OS. They are able use the s	, ,	-
	bry administration methods. They are able to solve problems by applying appropriate troubleshooting stems. Students are able to effectively configure centralised administration of a computer network.	methods and admi	inistrate
BIE-AG1.21	Algorithms and Graphs 1	Z,ZK	5
-	jorithm design, data structures, and graph theory, belonging to the core knowledge of every computin	-	
	s in which the students gain the basic skills and knowledge needed for time and space complexity of a practically the asymptotic mathematics.		
BIE-APS.21	Architectures of Computer Systems	Z,ZK	5
	nternal architecture of computers with universal processors at the level of machine instructions. Spec hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the princ		
	alar processors that can execute multiple instructions in one cycle, while ensuring the correctness of		
	as and architectures of shared memory multiprocessor and multicore systems and the memory coher		
	systems.		
BIE-ASB.21	Applied Network Security	Z,ZK	5
	s from computer networks in terms of cybersecurity. These topics extend the basic knowledge gained ture, encrypted network protocols, link and network layer security or wireless networks. After finishing		
	knowledge of security applications in computer networks.		it will get
BIE-BAP.21	Bachelor Thesis	Z	14
BIE-BEK.21	Secure Code	Z,ZK	5
	and how to take them into account in the design phase of their own code and solutions. After getting $\dot{fa}$		-
	unning programs with reduced privileges and methods of specifying these privileges, since not every r overflows will be practically demonstrated. Students will be introduced to the principles of securing of		
	procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the		
BIE-BPR.21	Bachelor Project	Z	1
At the beginning of the semester the student will c	ontact the supervisor of the bachelor thesis he has booked. They will discuss the partial tasks that st	udent will perform	during the
	these tasks, the supervisor will award him / her at the end of the semester with the BI-BPR course.		
BIE-CCN	Compiler Construction	Z,ZK	5 Identa to
, , ,	on of programming languages. Seeing and actually understanding self-compilation is the overarching		
BIE-CSI	Introduction to Computer Science	Z	2
	er Science for broad audiences: bachelor students in computer science, students majoring in other fie	elds but interested i	
	kground in basic math and the desire to understand the absolute basics of computer science. The go		
	students to understand, early on, what computer science is, why things such as high-level programn the representative and practically relevant level. After taking the class, students are able to answer not		
	h as which courses to take next and which books to follow up with, ideally realizing if they are interest	-	
	than expected, or even less than before.		
BIE-CZ0 Course Czech for foreigners of	Czech Language for Foreigners ffers the basic topics of conversation: Introductions, Orientation, Shopping, Work / Study, Travel, Time	KZ e, Family.	2
BIE-CZ1.21	Czech Language for Foreigners II	KZ	2
The course is intended for Students of English pro	grammes who have completed BIE-CZ0 course or have basic knowledge of the Czech language. The		
	icture of the Czech language structure with regard to the practical needs of Students residing in the C		
BIE-DBS.21 Students get acquisinted with the architecture of the	Database Systems e database engine and typical user roles. They learn to design the structure of a smaller data store (ii	Z,ZK	5
	in a relational database engine. They get acquainted with the SQL language and also with its theoreti		-
model. They will get acquainted with the principles	of relational database schema normalization. They understand the basic concepts of transaction proc	cessing and contro	
	source. At the end of the course, students will be introduced to alternative nonrelational database m		
BIE-DIF	Differential equations	Z,ZK	5
	rential equations, starting with basic motivation and examples of ODEs and progressing to essential so eness establish when solutions can be guaranteed. Linear and system-based ODEs are covered with		-
	-linear models such as predator-prey and epidemiological models to showcase real-world application		
partial differential equations (PDEs) extends these	e concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs		
	uler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		
BIE-DML.21   Students will get acquainted with the basic concent	Discrete Mathematics and Logic	Z,ZK	5 explained
	s of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fror roperties, and their types, especially functional relations, equivalences, and partial orders. The course	-	-
	combinatorics and number theory, with emphasis on modular arithmetics.	- y i v	

BIE-EEC	English language external certificate	Z	4
The BIE-ECC cours	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in English	sh comparable to o	r exceeding
	the B2 level of the Common European Framework of Reference for Languages.		_
BIE-EHA.21	Ethical Hacking	Z,ZK	5
-	purse is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vulne		-
exploitation in con	nputer networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus is vulnerabilities testing and the following process of penetration test documentation.	on nanus-on expe	nence with
BIE-EHD	Introduction to European Economic History	Z,ZK	3
	Lices a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco	· .	-
	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic		-
area of Roman Em	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial instituti	ons is deciphered.	The course
does not cover de	tailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and o	rganizations in his	tory. Class
	meetings will consist of a mixture of lecture and discussion.		
BIE-EPR	Economic project	Z	1
This course is an e	xtension of the course Introduction to European Economic History (BIE-EHD). There is no fixed schedule for BIE-EPR. A teacher will the semester.	contact you before	the start of
BIE-FTR.1	Financial Markets	Z,ZK	5
	has been deeply transformed in the recent years, which led to a development of structured financial products, a new point of view on	· ·	
	rket activities. The need to use and properly apply mathematical and technical tools is emphasized. To manage their financial activitie		
•	ools who have sufficient knowledge ICT and mathematics, and who have at the same time an understanding of the functioning of finance of the function of finance of the function of the function of finance of the function of	· •	•
Markets cours	e thus englobes both a description of financial markets and related economic theories, and an overview of mathematical and statistic	al tools used in thi	s field.
BIE-GIT.21	SW Development Technologies	Z	3
This course is aime	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	Git, the information	on manager
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		
BIE-HAS	Human Factors in Cryptography and Security	Z,ZK	5
This course is for	students interested not only in technical scope of computer science, but also in making products usable - for users and for developers	s. Students of this of	course can
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.		
BIE-HWB.21	Hardware Security	Z,ZK	5
	ith hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with the opera eatures of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of HW res		
-	ring with hardware during manufacture. Students will have an overview of contact and contactless smart card technology including a	-	
-	uthentication (biometrics). Students will understand methods of efficient implementations of ciphers. Students are expected to have be		-
	security and cryptography, and basic programming skills before enrolling into the course.	0	•

BIE-PJV	Programming in Java	Z,ZK	4
-	amming in Java will introduce students to the object oriented programming in Java programming language. Beside of basics of Java la	1 1	1
	will also be presented, especially data structures, files, GUI, networking, databases and concurrent APIs.		
BIE-PKM	Preparatory Mathematics	Z	4
	The purpose of Preparatory Mathematics is to help students revise the most important topics of high-school mathematics	1	4
			5
BIE-PRR.21	Project management	Z,ZK	5
	burse is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamwork, and		
	ication, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis, risk as		
	source schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especially for st		
deepening their P	knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management positions in la	ge companies. The	e course is
	also suitable for all those who will develop software or hardware in the form of team projects.		
BIE-PS2	Programming in shell 2	Z,ZK	4
	neral overview of scripting languages, introduction into syntax, semantics, programming style, data structures, pros and cons. In addit		
-	shell and some other particular scripting languages and will get practical experience with shell script programming. Note to Erasmus st		
	ovide even very basic Bourne shell usage. Depending on actual knowledge of the students, orientation in user filesystem tools (cp, In,		
data filtering too	Is (cut, tr, sort, uniq) can be provided. The advantage of this module is that we do not stop at this point - we will show you also a sel	ection of advanced	d scripting
	techniques used in practice.		
BIE-PSI.21	Computer Networks	Z,ZK	5
	ces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local i		
well. The lecture	es will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw	work technologies.	Students
pr	actically verify configurations and management of network devices in the lab within the environment of the operating systems Linux a	Ind Cisco IOS.	
BIE-PST.21	Probability and Statistics	Z,ZK	5
	the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables.	1 ' 1	-
	om variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction		
	known distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistica	-	-
	the statistical dependence of two or more random variables.		
BIE-SAP.21	Computer Structures and Architectures	Z,ZK	5
	and basic digital computer units and their structures, functions, and hardware implementation: ALU, control unit, memory system, inp	1 1	-
	r. In the labs, students gain practical experience with the design and implementation of the logic of a simple processor using modern	-	-
BIE-SCE1	Computer Engineering Seminar I	Z	4
	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to		
	ndividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	-	
articles and other	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teache	rs. The topics are n	new for each
	semester.	<del></del>	1
BIE-SCE2	Computer Engineering Seminar II	Z	4
	omputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to		
are approached ir	ndividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the	subject is work with	ith scientific

	semester.		
BIE-SEG	Systems Engineering	Z	0
This is an introduc	tory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles of	operating systems	for students
to understand pro	cessor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After taking	the class, students	s are able to
understand the	difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what co	ncurrency is, as op	posed to
	parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.		
BIE-SEP	World Economy and Business	Z,ZK	4
The course introc	uces students of technical university to the international business. It does that predominantly by comparing individual countries and k	key regions of world	d economy.
Students get to	know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedor	m, corruption and e	economic
development, which	ch are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on indiv	/idual readings. It is	s advised to
	take bachelor level of this course BIE-SEP as a prerequisite.		
BIE-SKJ.21	Scripting Languages	Z,ZK	4
Join us on a tour ir	to the world of scripted programming. Together, we will unveil the power of Bourne Again shell and PERL as proven industry standar	ds, as well as a cou	uple of other
standard text proc	essing utilities (AWK, sed), with some basic UNIX system tools, in many real-world situations like processing web feeds or logs. We v	will provide a gener	ral overview
of scripting langua	ages and introduction into their pros and cons and students get practical experience with shell script programming. We will touch also	ROFF, PerlDoc, an	nd even TeX
to get some insigh	t into how your code documentation can be implemented. And if you know UNIX system-level scripting already, we can show you adva	nced programming	g techniques
and tricks that get	overlooked frequently but increase code robustness or execution efficiency. The course is led by two veteran programmers in the script	ing world. Lukáš is	a renowned
lecturer in advanc	ed shell programming, teaching developers from the IT industry in several CE countries. Jan is a skilled lecturer and developer whose	e code contributes	to safe and
	streamline operations of cloud service datacenters around the globe.		
BIE-ST1	Network Technology 1	Z	3
	cused on essentials of computer networks and practice with network technologies. The course corresponds to the Cisco Netacad cur	riculum, CCNA1 -	R&S
	Introduction to Networks.		•
BIE-TAB.21	Applications of Security in Technology	Z,ZK	5
	purse is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Stude		1
	cybersecurity applications and extend their knowledge from the cryptology, the secure code, and system, network, and hardware	-	
BIE-TDP.21	Documentation and Presentation	KZ	3
	sed on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically fi	1 1	1
	t of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically prese		
	course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14		
		says or touthing.	
	exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed		
	exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.	774	5
BIE-TUR.21	User Interface Design	Z,ZK	5
Students gain a b	User Interface Design pasic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where software	are and other produ	ucts do not
Students gain a t	User Interface Design	are and other produ	ucts do not

	m operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a com	iputei powei sup	γριγ ΙΟΟΚS ΙΙ
	(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.		
BIE-UKB.21	Introduction to Cybersecurity	Z,ZK	5
he goal of the cour	rse is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic over	view of threats in	n cyberspa
	and attacker techniques, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace reg		-
BIE-UOS.21	Unix-like Operating Systems	KZ	5
	systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative fur		-
	ters and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic propert ids, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level o		
	to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting int		
BIE-VAK.21	Selected Combinatorics Applications	Z	3
ne course aims to ii	ntroduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the ba	asic courses, we	approach
	ins to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic		
-	cipation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) info		
vill select problems	s to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimize	ation and more. S	Students w
	also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.	7 71/	
BIE-VES.21	Embedded Systems	Z,ZK	5
	sign embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and embedde peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.	ca processors, ll	ion megra
BIE-VMM	Selected Mathematical Methods	Z,ZK	4
1	with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then add		
roperties. Further,	we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the wa	avelet transform.	
	e linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting	g examples.	
BIE-VR1.21	Virtual reality I	KZ	4
	al Reality (VR), virtual reality operations, metaverse, and creation. Rules and requirements for virtual worlds communication. The co		the ways
	creating virtual reality worlds and interactive activities in 3D worlds. It improves computational thinking, empathy, and shared social

also given to sens industrial impleme BIE-ZSB.21   The goal of the cou- uch as malware an BIE-ZUM   udents are introduc ace search, multi-a BIE-ZUM.21   udents are introduc ace search, multi-a FIT-ACM1   FIT-ACM2   FIT-ACM3   FIT-ACM3   FIT-ACM4	a description of the system model, the basic linear dynamic systems analysis and design verification and simple PID feedback, PSD a sors and actuators in control loops, issues of stability in control systems, single and continuous adjustment of the controller parameter antation of continuous and digital controllers and PLC control. The themes of lectures are accompanied by a number of useful exam implementations. Basics of System Security ares is to provide introduction to basic concepts in security of computer systems. Further, the course introduces the basics of forensi alysis or incident response. After finishing the course student will get both theoretical and practical knowledge in the area of moder as well as skills needed for independent work in the area of operating system security incident analysis. Artificial Intelligence Fundamentals ced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithms be presented as well.
