## Recomended pass through the study plan

## Name of the pass: Bachelor specialization Web Engineering, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Web Engineering, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of se	emester: 1

## List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
active part in the la	ourse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement nguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both th is rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind class of the term.	ne midterm and the	e final term
BI-AAG.21	Automata and Grammars	Z.ZK	5
Students are introduce and regular gramma	ced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite a rs, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	automata, regular e hierarchy of forma	expressions, al languages
BI-ACM	Programming Practices 1 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM2	Programming Practices 2 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM3	Programming Practices 3 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ACM4	Programming Practices 4 This is a selective course for preparing talented student for representation in international programming contests.	KZ	5
BI-ADW.1	Windows Administration This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	4
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
develops the knowle	the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cu edge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the thms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asyr	time and space co	
BI-ALO	Algebra and Logic The course extends and deepens the study of topics touched upon in the basic course in logic.	Z,ZK	4
BI-AND.21	Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-ANG	English Language, Internal Certificate Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AN	ZK IG	2
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2

The content of the	English language, contact preparation for the B2 level exam		2
active part in the	course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement - language instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both the		
-	ess rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by indi		
	class of the term.		0
BI-APJ	Aplication Programming in Java	Z,ZK	4
	This course is presented in Czech. Advanced technologies in Java.		
BI-ARD	Interactive applications on Arduino	KZ	4
	gned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applicat aried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded s		-
	ay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	-	
	Software Engineering students.		
BI-AVI.21	Algorithms visually	Z,ZK	4
	ements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer sc		-
knowledge presente	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&I that make understanding the principles of algorithms easy.	lt;http://www.algovis	ion.org>)
BI-AWD.21	Web and Database Server Administration	Z,ZK	5
	cquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and l		-
-	vice systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exam		
BI-BAP.21	Bachelor Thesis	Z	14
BI-BIG.21	DB Technologies for Big Data	KZ	5
	roduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is for		
-	e students were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible me	-	
collection, transform	mation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretic of individual technologies will be supplemented with specific examples from practice.	a loundation and p	resentation
BI-BLE	Blender	Z,ZK	4
	ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in		-
animation. It o	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	hics applications) c	ourse.
BI-BPR.21	Bachelor project	Z	1
-	ig of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	-	
	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at the enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvul		
	I signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top	-	
has reserved is for	mulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assig	gnment so that the	assignment
	can be supplemented and approved at the end of the semester.		
BI-CCN	Compiler Construction	Z,ZK	5
	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		
BI-CS1	Programming in C#		
		1 N/ 1	4

This part of BI-CS3	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental cc s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def nods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging well as work with files are emphasized. C# language and data access and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros ts used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techr arying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L ). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u if the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model (XML description). Language C# - design of web applications	nonstruction, types c inition and class in and exception pro- KZ soft platform. The st nologies such as L LINQ to Objects, LII using domain-speci I, Storage Model ar KZ	of variables, stancing, cessing, as 4 udents will INQ - a set NQ to XML fic objects and Mapping 4
operators, arrays constructors, meth BI-CS2 The C# language get to know object of features for que and LINQ to SQL (ORM). 	statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advar	,	-
	Ily Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a r		
	with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)		
BI-KSA	Cultural and Social Anthropology	ZK	2
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversit		
anthropological res	earch from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, healtl shown. The course is presented in Czech.	n, history, death, ei	tc) will be
BI-LA1.21	Linear Algebra 1	Z,ZK	5
	students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field		
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimination of the Gaussian elimination elimination of the Gaussian elimination elimination eliminat		
the connection w	ith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenv	alues and eigenve	ectors of a
	matrix. We will also demonstrate some applications of these concepts in computer science.		
BI-MA1.21	Mathematical Analysis 1	Z,ZK	5
-	e by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers. <sup>-</sup> f a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of function		-
	ot-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and		
	ssue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical description		-
BI-MA2.21	Mathematical Analysis 2	Z,ZK	6
-	tes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will lear	-	
	n method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to the	•	
-	scribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, an we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and H		-
-	f localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ		-
BI-MDF.21	Modern Data Formats	KZ	3
	urse is to give an overview of commonly used data formats for typical types of data. There will be a description of each data type and		_
data type	e along with tools available to work with such data. After finishing the course, the students should know how to work with common da	ta, e.g. on the Wet	).
BI-MIT	Mikrotik technologies	KZ	3
	on of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are con		
	vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the metro and practically deploy them. The suppose full completion of this subject requires the providus keepyledge of elementary computer as	-	
and now to adminis	trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne and technologies of the data-link, network and transport layer of the OSI model.	stworks concepts II	ve hi nincois
BI-MMP	Multimedia team project	KZ	4
	This cause is presented in Czech		

BI-MPP.21 Methods of interfacing peripheral devices Z,ZK	5
The course is focused on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universal serial bus (USB).	The course
includes both PC side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USB devices, Linux and	d Windows
drivers, simple application development, and APIs of selected devices.	
BI-MVT.21 Modern Visualisation Technologies Z,ZK	5
The goal of the course is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augmented reality, visual	
high resolution displays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentioned technologies, national according to the mentioned technologies, national according technologies, nationaccording technologies,	mely fractal
and procedural visualization, scientific data visualization, and 3D model scanning.	4
BI-OPT Introduction to Optical Networks Z,ZK Students get basic overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on possible problems with the emphasis on practical utilization in Internet and in network infrastructures.	4
of optical network technology and on their solutions. The course will include the history of optical communications, an overview of passive components (optical fibres, mu	
dispersion compensators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission systems). The course will	-
the most up-to-date topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as the accurate time of	
ultrastable frequency transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters. Students will solve	
from practice.	
BI-ORL Operations Research and Linear Programming KZ	5
The subject aims to introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundamental optimization	technique.
Operational research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (such as management)	
BI-OSY.21 Operating Systems Z,ZK	5
In this course that is a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread implementations, race	conditions,
critical regions, thread scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS monitoring. They are able	le to design
and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS Windows.	
BI-PA1.21 Programming and Algorithmics 1 Z,ZK	7
Students gain the ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, structured, pointers), experimentation of the structured of the	•
statements, functions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searching, sorting, and ma	anipulating
with linked lists and trees.	
BI-PA2.21 Programming and Algorithmics 2 Z,ZK	7
Students know the instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, queue, enlargeable arr	-
table). They learn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e.g., template programmin	amming,
copying/moving of objects, operator overloading, inheritance, polymorphism).	
BI-PHP.1 Programing in PHP KZ	4
The course is taught in Czech Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices and will use tool that	
development in PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. The	y snould
register for this course in their 3rd semester of study.           BI-PHP.21         Programing in PHP         KZ	
BI-PHP.21   Programing in PHP   KZ   The course is an introduction to the PHP language and technology. Students will learn also best practices and will use tools that make development in PHP easier	5
BI-PJS.1 JavaScript Programming KZ	4
Main goal of the course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development in Javascript. The	
recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for this course in their 4t	
of study.	
BI-PJS.21 JavaScript Programming KZ	5
The course is an introduction to Javascript programming. Students will also learn best practices and get acquai nted with tools that make code development in Javascript	ot easier.
BI-PJV Programming in Java Z,ZK	4
This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	
BI-PKM Introduction to mathematics Z	4
This course is presented in Czech.	
BI-PMA Programming in Mathematica Z,ZK	4
Students will be working with modern technical and scientific software. Students will learn how to use different programming styles (functional programming, rule-based programming)	ogramming,
etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.	
BI-PS2 Programming in shell 2 Z,ZK	4
Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In addition, they gain a dee	per insight
into shell and some other particular scripting languages and will get practical experience with shell script programming.	
BI-PSI.21 Computer Networks Z,ZK	5
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local networks and in the	
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced network technologies.	Students
practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux and Cisco IOS.	
	5
BI-PST.21 Probability and Statistics Z,ZK

BI-QUA	Quality Assurance	KZ	4
This course intro	duces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context	of different types of	software
development and will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should be prepared to perform a test			
analysis, desig	n a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found	d in the product und	der test.
BI-SAP.21	Computer Structure and Architecture	Z,ZK	5
	acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arith	•	
memory, I/O comm	nunication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple proce	ssor is practically in	nplemented
	in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.		
BI-SCE1	Computer Engineering Seminar I	Z	4
	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to adividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the		
	professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher

	semester.		
BI-SEP	World Economy and Business	Z,ZK	4
This course is pre	esented in Czech. The course introduces students of technical university to the international business. It does that predominantly by c	omparing individua	l countries
	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as		
corruption and eco	pnomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of d	scussions based o	n individual
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
BI-SKJ.21	Scripting Languages	Z,ZK	4
Students gain a g	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi	on, they gain a dee	per insight
	into shell and some other particular scripting languages and will get practical experience with shell script programming.	<u>г                                    </u>	
BI-SOJ	Machine Oriented Languages	Z,ZK	4
	urse will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimal us	-	
and efficient coope	ration of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of view lin	iked to higher level	languages.
	This knowledge will be used during reverse engineering, optimization, and evaluation of code security.	<b>1/7</b>	4
BI-SQL.1	Language SQL, advanced	KZ	4
	h knowledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In pa		
	queries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point of lexes, clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan ar		
	ed. Lectures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Ora	-	-

BIE-CSI	Introduction to Computer Science	7	2
	ory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fie	- 1	
	ool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The go		
, 0	rinciples of computer science for students to understand, early on, what computer science is, why things such as high-level program		
	rare, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer not		
	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interes		
	than expected, or even less than before.		
BIE-DIF	Differential equations	Z,ZK	5
	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential sc		-
	theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered wit		-
polynomial analy	rsis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world application	ns. Finally, an intro	duction to
partial differential	equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs	and PDEs, includi	ing implicit
	and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		
BIE-EEC	English language external certificate	Z	4
The BIE-ECC cour	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Englis	sh comparable to o	r exceeding
	the B2 level of the Common European Framework of Reference for Languages.		
BIE-IMA2	Introduction to Mathematics 2	Z	2

NI-AFP	Applied Functional Programming	KZ	5
This course is pres	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p	rogramming langua	ages are on
the rise nowadays	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master	ing this paradigm b	becomes a
	necessary competence of a software engineer: the theory and especially the practice.		
NI-DDM	Distributed Data Mining	KZ	4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands o	-	-
data processing fra	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	and will be capable	to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.		
NI-DZO	Digital Image Processing	Z,ZK	4
	ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg		,
	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is also		
	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv		-
	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, ac		
NI-IAM	Internet and Multimedia	Z,ZK	4
	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	· · ·	
	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u	-	
'	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effe		
	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording th	-	
	for audience.		
NI-LSM	Statistical Modelling Lab	KZ	5
-	ented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p	1	-
	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, an		
	At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi		
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
	pgramming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where	1	l abstraction
	plex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills		
of object systems	in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development n	eeds and areas of	interest. In
addition to deepen	ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of	on interesting proje	ects and OO
technologies in ter	rms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involven	nent in the Pharo C	Consortium.
