Recomended pass through the study plan

Name of the pass: Bachelor specialization Computer Systems and Virtualization, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Computer Systems and Virtualization, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the co	ourse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement	- students are due	to: -Take a
active part in the la	nguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both ti	he midterm and the	e final term
tests with the succes	s rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind	ividual teachers du	ring the fire
	class of the term.		
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduc	ced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	automata, regular e	expressions
and regular gramma	rs, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the	hierarchy of forma	al language
and they	understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5

BI-ADU.21	Unix Administration	Z,ZK	5
Students will learn the	e internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. They	1	difference
between user and ac	dministrator roles. They will get theoretical and practical knowledge of user management and administration, of users access rights,	file systems, disk s	subsystems
processes, memory	y, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the kn	owledge from the I	ectures on
	specific examples from practice.		
BI-ADW.1	Windows Administration	Z,ZK	4
Į.	This course is presented in Czech, However, there is an English variant in the program Informatics (B1801 / 4753).	'	•

BI-AG1.21			
The	Algorithms and Graphs 1	Z,ZK	5
	s the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cur		
· ·	ledge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the	· ·	mplexity of
	ithms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asymptotic mathematics in particular, the asymptotic mathematics in particular, the asymptotic	<u> </u>	
BI-ALO	Algebra and Logic	Z,ZK	4
5	The course extends and deepens the study of topics touched upon in the basic course in logic.		
BI-AND.21	Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-ANG	English Language, Internal Certificate Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AN	ZK	2

BI-APJ	Aplication Programming in Java	Z,ZK	4
DI-AFJ	This course is presented in Czech. Advanced technologies in Java.	Ζ,ΖΙ	4
BI-APS.21	Architectures of Computer Systems	Z,ZK	5
	n the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec	•	_
	processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the principal concepts of RISC architectures are concepts and the RISC architectures are concepts are concepts are concepts and the RISC architectures are concepts and the RISC architectures are concepts are conce	-	
	processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	•	
program. The cours	e further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory coher systems.	rence and consiste	ency in such
BI-ARD	Interactive applications on Arduino	KZ	4
	ned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applicati		
	ried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded sy	•	-
not only on displa	y of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	is suitable even fo	r Web and
	Software Engineering students.		
BI-AVI.21	Algorithms visually	Z,ZK	4
The course compler	ments other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer sc	ience that extend	substantially
knowledge presente	d in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&li	t;http://www.algovi	sion.org>)
	that make understanding the principles of algorithms easy.		_
BI-AWD.21	Web and Database Server Administration	Z,ZK	5
	quainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and be appropriately a relative to the process of the p		
web servi	ce systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exam

BI-MA1.21	Mathematical Analysis 1	Z,ZK	5
-	e by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers. If a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functions.	-	
	ot-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and		
	ssue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical descript		
BI-MA2.21	Mathematical Analysis 2	Z,ZK	6
•	tes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will learr n method.The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to the	=	
	scribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, an	•	- 1
=	we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and I focalization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ		- 1
BI-MIT	Mikrotik technologies	KZ	3
	on of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are con vice providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the m		
	trate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer ne		
	and technologies of the data-link, network and transport layer of the OSI model.		
BI-MMP	Multimedia team project This course is presented in Czech.	KZ	4
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	_ 5
	sed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE	, ,	
moladoo bolii i o d	drivers, simple application development, and APIs of selected devices.	dovided, Elitax ai	ia Williaowo
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5
=	urse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augm		
nign resolution disp	lays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentione and procedural visualization, scientific data visualization, and 3D model scanning.	ed technologies, na	imely fractal
BI-OPT	Introduction to Optical Networks	Z,ZK	4
_	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss		
	stechnology and on their solutions. The course will include the history of optical communications, an overview of passive components		
	sators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission syster e topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as	•	
•	ncy transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.		
DI 001	from practice.		
BI-ORL The subject aims to	Operations Research and Linear Programming or introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundar	KZ	5 technique
	nal research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (suc	•	
BI-OSY.21	Operating Systems	Z,ZK	5
	s a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread impered scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS moni		
chicai regions, tine	and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS W		ile to design
BI-PA1.21	Programming and Algorithmics 1	Z,ZK	7
	ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, structure of the structure of		
statements, function	ons, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searchi with linked lists and trees.	ng, sorting, and m	anipulating
BI-PA2.21	Programming and Algorithmics 2	Z,ZK	7
	instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, que	ue, enlargeable ar	-
table). They lear	n these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e copying/moving of objects, operator overloading, inheritance, polymorphism).	e.g., template prog	ramming,
BI-PHP.1	Programing in PHP	KZ	4
	aught in Czech Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices		
development in I	PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register f	or BIE-TWA.1. The	ey should
BI-PJS.1	register for this course in their 3rd semester of study. JavaScript Programming	KZ	4
	course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development		
•	tudents of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1.They should register for th of study.	•	
BI-PJV	Programming in Java	Z,ZK	4
5.5.4.	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-PKM	Introduction to mathematics This course is presented in Czech.	Z	4
BI-PMA	Programming in Mathematica	Z,ZK	4
	rking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm		ogramming,
5: 555	etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.		
BI-PS2 Students gain a ge	Programming in shell 2 programming in shell 2 programming style, data structures, pros and cons. In additi	Z,ZK	4 ener insight
otudente gant a ge	into shell and some other particular scripting languages and will get practical experience with shell script programming.	on, mey yani a det	hei iiisiäiii
BI-PSI.21	Computer Networks	Z,ZK	5
The course introduce	ces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local r	etworks and in the	
well. The lecture	es will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw	ork technologies.	Students
	actically verify configurations and management of network devices in the lab within the environment of the operating systems Linux a	_	

BI-PST.21	Probability and Statistics	Z,ZK	5
	the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. T		
	om variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction mover a lateral parameters from random sample characteristics. They will also be introduced to the methods for testing statistical	=	
	the statistical dependence of two or more random variables.	.,,,,	
BI-QAP	Quantum algorithms and programming	KZ	5
=	ng students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, o	=	- 1
_	porithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software developr ge. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMN		
orr ythorriangua	might be an advantage. No previous knowledge of physics is assumed.	rand expendice w	nui i yulon
BI-QUA	Quality Assurance	KZ	4
This course intro	duces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context	of different types of	software
-	vill experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should		
BI-SAP.21	n a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found Computer Structure and Architecture	Z,ZK	per test.
_	acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arith		
_	unication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple process	-	
	in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.		
BI-SCE1	Computer Engineering Seminar I	Z	4
	mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the		
	orofessional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher	•

Introduction to Computer Science ory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other file tool students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The go rinciples of computer science for students to understand, early on, what computer science is, why things such as high-level programm are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer not questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interes than expected, or even less than before. Differential equations as a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential so theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered with sis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world application equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs. English language external certificate see can be recognized for any active semester after the submission of a certificate certificate hat demonstrates their proficiency in English the B2 level of the Common European Framework of Reference for Languages.
