## Recomended pass through the study plan

## Name of the pass: Master specialization Computer Security, in English, 2021

Faculty/Institute/Others: Department: Pass through the study plan: Master specialization Computer Security, in English, 2021 Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Informatics Type of study: Follow-up master full-time Note on the pass: ~Compulsory courses of neighboring specializations can be enrolled as optional ones.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

## List of courses of this pass:

Code	Name of the course	Completion	Credits
FITE-EHD	Introduction to European Economic History	Z,ZK	3
The course introd	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global ecc	nomy through the	description
of the key periods	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	history. From large	e economic
area of Roman Em	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institut	ons is deciphered.	The course
does not cover de	tailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and o	organizations in his	tory. Class
	meetings will consist of a mixture of lecture and discussion.		
FITE-SEP	World Economy and Business	Z,ZK	4
The course introd	uces students of technical university to the international business. It does that predominantly by comparing individual countries and k	ey regions of world	d economy.
Students get to	know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedor	n, corruption and e	economic
development, which	th are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on indiv	idual readings. It is	s advised to
	take bachelor level of this course BIE-SEP as a prerequisite.		
NI-AML	Advanced machine learning	Z,ZK	5
	ces students to selected advanced topics of machine learning and artificial intelligence. The topics present techniques in the field of rec		tems, image
processing,	control and interconnection of physical laws with the field of machine learning. The aim of the exercise is to familiarize students with	he methods discu	ssed.
NI-DID	Digital drawing	Z	2
	oduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, persp	bective and color th	
	apply in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course		-
	r learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practi	-	
NI-DSW	Design Sprint	Z	2
	on projects using the Design Sprint method, developed by Google. THanks to this method the teams are able to go from idea to valida	_	
	udents will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting wit		-
	testing the prototypes (plus final presentation).		<u>-</u>
NI-GLR	Games and reinforcement learning	Z,ZK	4
	cement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelliger		
	give you both theoretical and practical background so you can participate in related research activities. Presented in Englis		
NI-GRI	Grid Computing	Z,ZK	5
	Grid computing and gain knowledge about the world-wide network and computing infrastructure.	2,210	
NIE-ADM	Data Mining Algorithms	Z,ZK	5
	s on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students		-
	sis is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation sys		
basics. The empha	methods).	lems) and models	(e.g., keine
NIE-ADP	,	Z,ZK	5
	Architecture and Design patterns		-
-	is course is to provide students with both work knowledge about the underlying foundations of object-oriented design and analysis as ues, and tradeoffs of advanced software design. In the first part of the course, the students will refresh and deepen their knowledge c		-
•	the commonly used object-oriented design patterns that represent the best practices for solving common software design problems.	• •	0
-	the principles of software architecture design and analysis. This includes the classical architectural styles, component based systems	-	
	architectures used in large-scale distributed systems.		ou sonward
NIE-AIB	Algorithms of Information Security	Z.ZK	5
	quainted with the algorithms of secure key generation and cryptographic error (not only biometric) data processing. Furthermore, stude	,	-
-	otographic protocols (identification, authentication, and signature schemes). Another part of the course is dedicated to malware detection		
principles of cryp	learning in detection systems. The last topic includes practical steganographic methods and attacks on steganographic syste		I machine
NIE-AM1	Middleware Architectures 1	Z,ZK	5
			1
	dy new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste lication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm		
aronneolure and ap	of applications. The will also study principles and technologies for miduleware focused on application integrations, asynchronous common of applications. This course replaces the course MIE-MDW.	and thy	n availability
		7 71/	F
NIE-AM2	Middleware Architectures 2	Z,ZK	5
Students will learn	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architectur	es, concepts and to	ecnnologies
	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.	7 71/	
NIE-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementa		

NIE-BKO	Error Control Codes	Z,ZK	5
	ds the basic knowledge of security codes used in current systems for error detection and correction. It provides the necessary mathem		
linear, cyclic co	des and codes for the correction of multiple errors, clusters of errors and whole syllables (bytes). Students will also learn how to imple	ment these detect	ions and
со	rrections for different types of transmissions (parallel, serial) when storing data in memory and when transmitting over telecommunica	tion channels.	
NIE-BLO	Blockchain	Z,ZK	5
	rstand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platform	-	-
	a secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places a		
relationship betwe	een blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the supervising implementation of blockchain-based solutions in both academia and business.	students for imple	menung or
NIE-BPS	Wireless Computer Networks	Z,ZK	4
	n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad		-
	inisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle		
	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab	• •	
NIE-BVS	Embedded Security	Z,ZK	5
Students gain basi	c knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of crypto		in hardware
and software (in er	nbedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources	for securing interr	al functions
	of computer systems.		
NIE-CPX	Complexity Theory	Z,ZK	5
Students will lea	rn about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the	theory concerning	g practical
	(in)tractability of difficult problems.		
NIE-DDW	Web Data Mining	Z,ZK	5
	arn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain		-
lechniques for wet	o crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overvie in the field of social web and recommendation systems.	w of most recent de	evelopments
NIE-DIP	Diploma Project	Z	30
NIE-DSV	Distributed Systems and Computing	Z,ZK	5
	luced to methods for coordination of processes in distributed systems and computing		-
	In basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that s		
	data and services, and safety in case of failures.		
NIE-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
	s to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with		
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.		
NIE-EHW	Embedded Hardware	Z,ZK	5
-	s basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the		
systems, that profi	t from their specialized structure for effective computation and acceleration. Design of fast custom computing machines is discussed,	including standard	ized means
	of internal communication, parallelism extraction and utilization in special structures and system architectures.		_
NIE-EPC	Effective C++ programming	Z,ZK	5
	v to use the modern features of contemporary versions of the C++ programming language for software development. The course focus ficiency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor t	• -	ng effectivity
NIE-ESW	Embedded Software	·	5
	e course acquainted students with the specifics of software development for embedded systems. The course covers the areas from the ba	Z,ZK sic techniques of p	-
	d code optimizations, through typical areas as the reliable software development, embedded operating systems, signal processing, u		
	combined with artificial intelligence.		1
NIE-EVY	Efficient Text Pattern Matching	Z,ZK	5
Students get know	ledge of efficient algorithms for text pattern matching. They learn to use so called succinct data structures that are efficient in both acces		complexity.
	They will be able to use the knowledge in design of applications that utilize pattern matching.		
NIE-FME	Formal Methods and Specifications	Z,ZK	5
Students are able	to describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so	ftware tools that all	low to prove
	basic properties of software.		
NIE-GAK	Graph theory and combinatorics	Z,ZK	5
, s	ass is to introduce the most important topics in graph theory, combinatorics, combinatorial structures, discrete models and algorithms.	•	-
	ne basic principles but also on applications in problem solving and algorithm design. The topics include: generating functions, selected top theory, introduction to probabilistic method, properties of various special classes of graphs and combinatorial structures. The theory w	• •	,, ,, ,, ,, ,, ,, ,, ,, ,, ,, ,, ,, ,,
obioning, reamoby	of combinatorics on words, formal languages and bioinformatics.		
NIE-GPU	GPU Architectures and Programming	Z,ZK	5
	knowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CU	,	-
which is already a	widespread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com	putational structur	es, students
	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.		
NIE-HMI	History of Mathematics and Informatics	Z,ZK	3
	es on selected topics from calculus, general algebra, number theory, numerical mathematics and logic - useful for today computer sci	-	
	some relations between computer science and mathematical methods. Some examples of applications of mathematics to computer so		
NIE-HSC	Side-Channel Analysis in Hardware	Z,ZK	4
	edicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack	-	
	side channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and They also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel	-	-
NIE-HWB	Hardware Security	Z,ZK	<sup>e.</sup> 5
	es the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguard		
	nears. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Stude	-	-
-	yptographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	-	-

NIE-KOD	Data Compression	Z,ZK	5
Students are intro	buced to the basic principles of data compression. They will learn the necessary theoretical background and get an overview of data	compression meth	ods being
used in practice. The	he overview covers principles of integer coding and of statistical, dictionary, and context data compression methods. In addition, stude	ents learn the fundation	amentals of
	lossy data compression methods used in image, audio, and video compression.	774	
NIE-KOP	Combinatorial Optimization	Z,ZK	6
The students will g	gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not onl also to apply and evaluate heuristics for practical problems.	y to select and imp	nement but
NIE-KRY	Advanced Cryptology	Z,ZK	5
	n the essentials of cryptanalysis and the mathematical principles of constructing symmetric and asymmetric ciphers. They will know the	I ' I	-
	generators. They will have an overview of cryptanalysis methods, elliptic curve cryptography and quantum cryptography, which they c		
	their own systems or to the creation of their own software solutions.		
NIE-MCC	Multicore CPU Computing	Z,ZK	5
•	cquainted in detail with hardware support and programming technologies for the creation of parallel multithreaded computations on mu		
	d memory, which are today the most common computing nodes of powerful computer systems. Students will gain knowledge of archi preduce the decrease in computing power due to the widening performance gap between the computational requirements of multi-cor		
	throughput. On specific non-trivial multithreaded programs, students will also learn the basics of the art of creating these application of the second statements of multi-conductivity and the second statements of multi-conductivity and the second statements of		ny interiace
NIE-MKY	Mathematics for Cryptology	Z,ZK	5
	deeper knowledge of algebraic procedures solving the most important mathematical problems concerning the security of ciphers. In	I ' I	-
on the problem of	of solving a system of polynomial equations over a finite field, the problem of factorization of large numbers and the problem of discre	te logarithm. The p	roblem of
	factorization will also be solved on elliptic curves. Students will further become familiar with modern encryption systems based on	lattices.	
NIE-MPI	Mathematics for Informatics	Z,ZK	7
	s on selected topics from general algebra with emphasis on finite structures used in computer science. It includes topics from multi-variate	-	-
	integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The man and their stability analysis. The topics are completed with the demonstration of applications in computer science. The course focus	-	
numerical algoriti	argumentation.	es on clear presen	
NIE-MPR	Master Project	Z	7
	g of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial ta	I – I	-
during the semeste	er. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end c	of the semester. 2. T	he external
	he information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut.cz/s		-
	ned form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the FT topic		
is rather general,	the immediate tasks the supervisor assigns to the student for the upcoming semester should aim at fine-tuning the FT topic so that t approvable at the end of the semester.	ne FII will be com	iplete and
NIE-MTI	Modern Internet Technologies	Z,ZK	5
	advanced networking technologies and protocols for both local area networks and wide area networks. They get acquainted with rout		-
	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile		
NIE-MVI	Computational Intelligence Methods	Z,ZK	5
Students will under	rstand the basic methods and techniques of computational intelligence, which are based on traditional artificial intelligence, are parall	el in nature and are	e applicable
to solving a wide ra	ange of problems. The subject is also devoted to modern neural networks and the ways in which they learn and neuroevolution. Student		se methods
	work and how to apply them to problems related to data extraction, management, intelligence in games and optimisation, et		
NIE-NON	Nonlinear Continuous Optimization and Numerical Methods	Z,ZK	5
	roduced to nonlinear continuous optimization, principles of the most popular methods of optimization and applications of such methoc finite element method and the finite difference method used for solving ordinary and partial differential equations in engineering. They		
	quations that arise from discretization of the continuous problems by direct and iterative algorithms. They will also learn to implement		-
0	as well as in parallel.	0	
NIE-NSS	Normalized Software Systems	ZK	5
	the foundations of normalized systems theory that studies the evolvability of modular structures based on concepts from engineering		-
, , , , , , , , , , , , , , , , , , , ,	r from thermodynamics. Students will understand a set of principles that indicate where violations of stability and entropy-related issue	, 0	
	second part of the course, students learn how to construct software architectures using a set of 5 design patterns called elements. Th		
functionality of inio	rmation systems in terms of storing data, executing actions, workflows, connectors, and triggers, while handling violations of the stability This knowledge allows students to realize new levels of evolvability in software architectures.	and entropy-related	a principies.
NIE-NUR	User Interface Design	Z,ZK	5
	stand the theorical background of human-computer interaction and user interface (UI) design, will learn formal description of UIs, forma	· · ·	-
	rocesures. They get acquainted with graphical, speech, and multimodal UIs. Thanks to the gained knowledge, the students will be able		
NIE-PAM	Parameterized Algorithms	Z,ZK	4
-	optimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often necess	-	-
	. We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often one		
	inputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity expone n the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial tir		
	sible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solution		-
-	neterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pro-		
	will also not miss out the relations to other approaches to hard problems such as moderately exponential algorithms or approximation	n schemes.	
NIE-PDB	Advanced Database Systems	Z,ZK	5
	emselves in problems of evaluation and optimization of SQL queries. The next part of the course deals with new concepts of database		
databases), with th	he related new data models (XML, graph databases, column databases) and languages for working with them (XQuery, XPath, CYPH	IER, Gremlin). The	last part of
	the course deals with performance evaluation of database machines. This course is equivalent to the course MIE-PDB.	1/7	
NIE-PDL	Practical Deep Learning signed to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine lea	KZ	5 brougbout
	ts will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such a	-	-
	language processing.		
NIE-PDP	Parallel and Distributed Programming	Z,ZK	6
-	mputer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores	s. Parallel computin	
are becoming a u	biquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor	ms. Students get a	cquainted

with architectures of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication operations, and languages and environments for parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and on selected problems, they will learn the techniques of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course includes a semester project of practical programming in OpenMP and MPI for solving a particular pontrivial problem

practical programming in OpenMP and MPI for solving a particular nontrivial problem.		
NIE-PIS Advanced Information Systems	Z,ZK	5
Students learn the notion of business process logic and its formalization, with business process roles, business rules, and data processing, with the not		
enterprise services and service solution of business logic. They get acquainted with these notions also for the other types of ISs. They learn about ac		0
artificial intelligence methods for implementation of these ideas in ISs. They understand modern object-oriented methodologies for modelling of busin	iess processes, busi	ness rules,
processed data, and enterprise ISs. They will get the rules and technologies for successful implementation of IS.		-
NIE-PML Personalized Machine Learning	Z,ZK	5
Personalized machine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteris		
entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal intere-		
to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from the	-	and practical
perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial comme		-
NIE-REV Reverse Engineering	Z,ZK	5
Students will learn fundamentals of reverse engineering of computer software (methods of executing and initializing programs, organization of executive software).		
libraries). Special attention will be paid to C ++. Students will also become familiar with the principles of debugging tools, disassemblers and obfuscat will focus on code compression and decompression and executable file reconstruction.	ion methous. Finally,

NIE-VPR	Research Project	Z	5
1. At the beginning of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial tasks that should be carried out			
during the semester. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end of the semester. 2. External			
Master these (MT) supervisor fills his/her assessment into the paper "Form to award assessment by an external Final theses (FT) supervisor" (for the courses BIE-BAP, MIE-MPR,			
MIE-DIP). Students, then, ensure that the assessment is registered into the information system (IS) by asking their internal FT opponent to award the assessment to the IS based on			
the confirmation of the external MT supervisor. In the case the FT opponent is external as well, the assessment will be registered to the IS by the head of the department responsible			
for the topic of the MT. 3. If the FT topic that the student has reserved is rather general, the immediate tasks the supervisor assigns to the student for the upcoming semester should			
aim at fine-tuning the FT topic so that the FTT will be complete and approvable at the end of the semester.			
NIE-VSM	Selected statistical Methods	Z,ZK	7
Summary of probability theory; Multivariate normal distribution; Entropy and its application to coding; Statistical tests: T-tests, goodness of fit tests, independence test; Random processes			
- stacionarity; Markov chains and limiting properties; Queuing theory			
NIE-VYC	Computability	Z,ZK	4
Classical theory of recursive functions and effective computability.
