Recomended pass through the study plan

Name of the pass: Master specialization Computer Systems and Networks, in English, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Master specialization Computer Systems and Networks, in English, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatics

Type of study: Follow-up master full-time

Note on the pass: ~Compulsory courses of neighboring specializations can be enrolled as optional ones.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

List of courses of this pass:

Code	Name of the course	Completion	Credits
FITE-EHD	Introduction to European Economic History	Z,ZK	3
of the key periods area of Roman Emp	ices a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institut tailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and of meetings will consist of a mixture of lecture and discussion.	history. From large ions is deciphered.	economic The course
FITE-SEP	World Economy and Business	Z,ZK	4
Students get to k	uces students of technical university to the international business. It does that predominantly by comparing individual countries and k know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedor In are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on indiv take bachelor level of this course BIE-SEP as a prerequisite.	m, corruption and e	conomic
MI-SCE1	Computer Engineering Seminar Master I	Z	4
are approached inc articles and other p	nputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the rofessional literature and/or work in K. N laboratories. The capacity of the subject is limited by the possibilities of the seminar teache semester.	subject is work wirs. The topics are r	th scientific ew for eac
MIE-MZI	Mathematics for data science	Z,ZK	4
	tudents are introduced to the domains of mathematics necessary for understanding the standard methods and algorithms used in de near algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princ selected notions from probability theory and statistics.		
NI-AML	Advanced machine learning	Z,ZK	5
	ses students to selected advanced topics of machine learning and artificial intelligence. The topics present techniques in the field of recontrol and interconnection of physical laws with the field of machine learning. The aim of the exercise is to familiarize students with	•	
NI-DID	Digital drawing	Z	2
they will practically	oduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, perspapely in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practi	is fit for anyone w	no wants to
NI-DSW	Design Sprint	Z	2
	on projects using the Design Sprint method, developed by Google. THanks to this method the teams are able to go from idea to valida idents will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting wit testing the prototypes (plus final presentation).		•
NI-GLR	Games and reinforcement learning	Z,ZK	4
The field of reinford	cement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelliger give you both theoretical and practical background so you can participate in related research activities. Presented in Englis		intended to
NI-GRI	Grid Computing Grid computing and gain knowledge about the world-wide network and computing infrastructure.	Z,ZK	5
NIE-ADM	Data Mining Algorithms	Z,ZK	5
	on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students is is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation sys methods).		
NIE-ADP	Architecture and Design patterns	Z,ZK	5
the challenges, issuand get familiar with	s course is to provide students with both work knowledge about the underlying foundations of object-oriented design and analysis as ies, and tradeoffs of advanced software design. In the first part of the course, the students will refresh and deepen their knowledge of the commonly used object-oriented design patterns that represent the best practices for solving common software design problems. In the principles of software architecture design and analysis. This includes the classical architectural styles, component based systems architectures used in large-scale distributed systems.	s well as with unde of object-oriented p In the second part	rogramming the students

\UE 415		7.71	
NIE-AIB	Algorithms of Information Security	Z,ZK	5
-	quainted with the algorithms of secure key generation and cryptographic error (not only biometric) data processing. Furthermore, stude tographic protocols (identification, authentication, and signature schemes). Another part of the course is dedicated to malware detec		
principles of cryp	learning in detection systems. The last topic includes practical steganographic methods and attacks on steganographic systems.		illacillie
NIE-AM1	Middleware Architectures 1	Z,ZK	5
	ly new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste	,	
architecture and apl	ication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm	unications and hig	h availability
	of applications. This course replaces the course MIE-MDW.		
NIE-AM2	Middleware Architectures 2	Z,ZK	5
Students will learn	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architecture	s, concepts and to	echnologies
.u= .b:	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.	 - · ·	
NIE-ARI	Computer arithmetic	Z,ZK	4
NIE DIG	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementations.		
NIE-BKO	Error Control Codes	Z,ZK	5 principles of
	s the basic knowledge of security codes used in current systems for error detection and correction. It provides the necessary mathen les and codes for the correction of multiple errors, clusters of errors and whole syllables (bytes). Students will also learn how to imple		
	rections for different types of transmissions (parallel, serial) when storing data in memory and when transmitting over telecommunica		uono ana
NIE-BLO	Blockchain	Z,ZK	5
	stand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platforr	,	' '
code and deploy a	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places a	an increased empl	nasis on the
relationship between	en blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the	students for imple	ementing or
	supervising implementation of blockchain-based solutions in both academia and business.		
NIE-BPS	Wireless Computer Networks	Z,ZK	4
	about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad hisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle		
bioaucasi mechai	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab		echanisms
NIE-BVS	Embedded Security	Z,ZK	5
	knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of cryptography		
-	bedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources		
	of computer systems.		
NIE-CPX	Complexity Theory	Z,ZK	5
Students will lear	n about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the	theory concerning	g practical
	(in)tractability of difficult problems.		1
NIE-DDW	Web Data Mining	Z,ZK	5
	rn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain		- 1
techniques for vveb	crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overvier in the field of social web and recommendation systems.	w of most recent de	evelopments
NIE-DIP	Diploma Project	Z	30
NIE-DSV	Distributed Systems and Computing	Z,ZK	5
_	iced to methods for coordination of processes in distributed environment characterised by nondeterministic time responses of computing	,	
	n basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that s	•	
	data and services, and safety in case of failures.		
NIE-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
The course intends	to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with	the most fundame	ental notions
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.		
NIE-EHW	Embedded Hardware	Z,ZK	5
•	basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the from their specialized structure for effective computation and acceleration. Design of fast custom computing machines is discussed,		
systems, mai prom	of internal communication, parallelism extraction and utilization in special structures and system architectures.	including standard	lizeu means
NIE-EPC	Effective C++ programming	Z,ZK	5
l l	to use the modern features of contemporary versions of the C++ programming language for software development. The course focus	,	
	ciency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor t		
NIE-ESW	Embedded Software	Z,ZK	5
Embedded software	course acquainted students with the specifics of software development for embedded systems. The course covers the areas from the ba	sic techniques of p	rogramming
in C language and	code optimizations, through typical areas as the reliable software development, embedded operating systems, signal processing, up	to sophisticated	techniques
= =	combined with artificial intelligence.		
NIE-EVY	Efficient Text Pattern Matching	Z,ZK	5
Students get knowle	edge of efficient algorithms for text pattern matching. They learn to use so called succinct data structures that are efficient in both access. They will be able to use the knowledge in design of applications that utilize pattern matching.	s time and memory	complexity.
NIE-FME		Z,ZK	5
	Formal Methods and Specifications of describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so		
aaao aro abio to	basic properties of software. They learn to use some software.	a. o toolo triat di	15 piovo
NIE-GAK	Graph theory and combinatorics	Z,ZK	5
	es is to introduce the most important topics in graph theory, combinatorics, combinatorial structures, discrete models and algorithms.		
on undestanding the	e basic principles but also on applications in problem solving and algorithm design. The topics include: generating functions, selected top	ics from graph and	hypergraph
coloring, Ramsey th	neory, introduction to probabilistic method, properties of various special classes of graphs and combinatorial structures. The theory w	ill be also applied	in the fields
NIE OS.	of combinatorics on words, formal languages and bioinformatics.		
NIE-GPU	GPU Architectures and Programming	Z,ZK	5
-	nowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CUI idespread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com		
ion is alleauy a W	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.	patational structur	oo, otuudiilo

NIE-HMI	History of Mathematics and Informatics	Z,ZK	3
	ses on selected topics from calculus, general algebra, number theory, numerical mathematics and logic - useful for today computer so some relations between computer science and mathematical methods. Some examples of applications of mathematics to computer so	-	
NIE-HSC	Side-Channel Analysis in Hardware	Z,ZK	4
	edicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attac		
various kinds of	side channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and	get familiar with hig	her-order
	They also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel		
NIE-HWB	Hardware Security	Z,ZK	5
•	les the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguard neans. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Stude	_	-
_	ryptographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	-	ago azout
NIE-KOD	Data Compression	Z,ZK	5
	oduced to the basic principles of data compression. They will learn the necessary theoretical background and get an overview of data		٠ ا
used in practice. T	he overview covers principles of integer coding and of statistical, dictionary, and context data compression methods. In addition, studi	ents learn the funda	mentals of
NIE-KOP	lossy data compression methods used in image, audio, and video compression. Combinatorial Optimization	Z,ZK	6
	gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not onl		
	also to apply and evaluate heuristics for practical problems.	,	
NIE-KRY	Advanced Cryptology	Z,ZK	5
	in the essentials of cryptanalysis and the mathematical principles of constructing symmetric and asymmetric ciphers. They will know the	=	
random number	generators. They will have an overview of cryptanalysis methods, elliptic curve cryptography and quantum cryptography, which they c their own systems or to the creation of their own software solutions.	an apply to the inte	gration of
NIE-MCC	Multicore CPU Computing	Z,ZK	5
	cquainted in detail with hardware support and programming technologies for the creation of parallel multithreaded computations on mu		
and virtually share	ed memory, which are today the most common computing nodes of powerful computer systems. Students will gain knowledge of archi	tecturally specific o	ptimization
techniques used to	o reduce the decrease in computing power due to the widening performance gap between the computational requirements of multi-cor		ry interface
NIE-MKY	throughput. On specific non-trivial multithreaded programs, students will also learn the basics of the art of creating these applications. Mathematics for Cryptology	Z,ZK	5
	deeper knowledge of algebraic procedures solving the most important mathematical problems concerning the security of ciphers. In		
_	of solving a system of polynomial equations over a finite field, the problem of factorization of large numbers and the problem of discre	•	
	factorization will also be solved on elliptic curves. Students will further become familiar with modern encryption systems based on	lattices.	
NIE-MPI	Mathematics for Informatics	Z,ZK	7
	s on selected topics from general algebra with emphasis on finite structures used in computer science. It includes topics from multi-variate e integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The	-	
	hm and their stability analysis. The topics are completed with the demonstration of applications in computer science. The course focus	-	
· ·	argumentation.	•

NIE-PDB Advanced Database Systems Z,ZK 5 Students orient themselves in problems of evaluation and optimization of SQL queries. The next part of the course deals with new concepts of database machines (so called NoSQL databases), with the related new data models (XML, graph databases, column databases) and languages for working with them (XQuery, XPath, CYPHER, Gremlin). The last part of the course deals with performance evaluation of database machines. This course is equivalent to the course MIE-PDB. NIE-PDL Practical Deep Learning ΚZ 5 This course is designed to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine learning framework. Throughout the course, students will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such as computer vision and natural language processing. NIE-PDP Parallel and Distributed Programming Z,ZK 21st century in computer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores. Parallel computing systems are becoming a ubiquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platforms. Students get acquainted with architectures of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication operations, and languages and environments for parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and on selected problems, they will learn the techniques of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course includes a semester project of practical programming in OpenMP and MPI for solving a particular nontrivial problem. **NIE-PIS** Advanced Information Systems Z,ZK 5 Students learn the notion of business process logic and its formalization, with business process roles, business rules, and data processing, with the notion of service oriented company, enterprise services and service solution of business logic. They get acquainted with these notions also for the other types of ISs. They learn about agility and adaptivity and using of artificial intelligence methods for implementation of these ideas in ISs. They understand modern object-oriented methodologies for modelling of business processes, business rules, processed data, and enterprise ISs. They will get the rules and technologies for successful implementation of IS. NIE-PML Personalized Machine Learning Personalized machine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristics and behaviors of individual entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal interests, its principles can be applied to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theoretical, algorithmic, and practical perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial communities. Reverse Engineering **NIE-REV** Z,ZK Students will learn fundamentals of reverse engineering of computer software (methods of executing and initializing programs, organization of executable files, work with third-party libraries). Special attention will be paid to C++. Students will also become familiar with the principles of debugging tools, disassemblers and obfuscation methods. Finally, the course will focus on code compression and decompression and executable file reconstruction. Pattern Recognition NIE-ROZ Z,ZK The aim of the module is to give a systematic account of the major topics in pattern recognition with emphasis on problems and applications of the statistical approach to pattern recognition. Students will learn the fundamental concepts and methods of pattern recognition, including probability models, parameter estimation, and their numerical aspects System Security and Forensics NIE-SBF Students will be introduced to various aspects of system security (principles of endpoint security, principles of security policies, security models, authentication concepts). Students will also learn about forensic analysis as a tool for investigating security incidents (techniques used by malicious software or attackers, forensic analysis techniques, and the importance of memory or file system artifacts for attack analysis and detection). NIE-SCE1 Computer Engineering Seminar Master I The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. NIE-SCE2 Computer Engineering Seminar Master II The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. NIE-SEP World Economy and Business The course introduces students of technical university to the international business. It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite. NIE-SIB **Network Security** 7.7K The students will gain theoretical and practical knowledge and experience in the area of current security threats in computer networks, specifically about detection and defense. The course explains basic pricipals of security monitoring, packet-based and flow-based analysis, in order to detect anomalies and suspicious network traffic. The course focuses on explanation and practical examples of various mechanisms of securing network infrastructure and detection in real time. The course covers general principals of handling detected security events (i.e. incident handling and incident response). NIE-SIM Digital Circuit Simulation and Verification Z,ZK 5 Aim of the course is to acquaint the students with principles of digital circuit simulation at RTL (Register Transfer Level) and TLM (Transaction Level Modeling) levels and with the properties of proper tools. The course covers today recent verification methods, too. Semantic Web and Knowledge Graphs The students will learn the most recent concepts and technologies of the Semantic Web. The course will provide an overview of the Semantic Web technologies, methods and best practices for modelling, integration, publishing, querying and consumption of semantic data. The students will also gain skills in creation of knowledge graphs and their systematic quality assurance. NIE-SYP Parsing and Compilers 5 Z.ZK The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of various variants and applications of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. **NIE-TES** Z.ZK Systems Theory Today, humankind has the ability to develop systems of incredible complexity (e.g., trains, microprocessors, airplanes, nuclear power plants). However, the costs of managing this complexity and of ensuring the correct behavior of a given system have become critical. A key technique for mastering this complexity is the usage of models that describe only those aspects of the systems that are important for the task at hand, and automated tools for analyzing those models. This subject will present theory and algorithms that form the basis for the modeling and analysis of complex systems.

NIE-TSP	Testing and Reliability	Z,ZK	5
Students will gain I	nowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre	pare a test set with	the help of
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equip	oment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NIE-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will gai	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. The	ey will get
acquainted with vir	rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	ently operate and o	ptimize the
performance pa	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect	ve technology toda	ay for the
management of cor	nplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in	n the use of moder	n integration
	and development tools (Continuous integration and development).		
NIE-VPR	Research Project	Z	5
1. At the beginning	of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial ta	sks that should be	carried out
during the semest	er. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the en	d of the semester.	2. External
Master these (MT) supervisor fills his/her assessment into the paper "Form to award assessment by an external Final theses (FT) supervisor" (for the	courses BIE-BAP,	MIE-MPR,
MIE-DIP). Students	s, then, ensure that the assessment is registered into the information system (IS) by asking their internal FT opponent to award the a	ssessment to the I	S based on
the confirmation of	the external MT supervisor. In the case the FT opponent is external as well, the assessment will be registered to the IS by the head	of the department	responsible
for the topic of the	MT. 3. If the FT topic that the student has reserved is rather general, the immediate tasks the supervisor assigns to the student for the	ne upcoming seme	ster should
	aim at fine-tuning the FT topic so that the FTT will be complete and approvable at the end of the semester.		
NIE-VSM	Selected statistical Methods	Z,ZK	7
Summary of probab	illity theory; Multivariate normal distribution; Entropy and its application to coding; Statistical tests: T-tests, goodness of fit tests, indepen	dence test; Randor	n processes
	- stacionarity; Markov chains and limiting properties; Queuing theory		
NIE-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.	•
