Recomended pass through the study plan

Name of the pass: Specialization Medical Instrumentation - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Pass through the study plan: Medical Electronics and Bioinformatics - Specialization Medical Instrumentation

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Medical Electronics and Bioinformatics

Type of study: Follow-up master full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

List of courses of this pass:

Code	Name of the course	Completion	Credits
BDIP30	Diploma Thesis	Z	30
Independent final	comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or h	ner branch of study	, which will
be specified b	y branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the compreh	ensive final examir	nation.
BE2M31DSPA	Digital Signal Processing	Z,ZK	6
The subject gives	overview about basic methods of digital signal processing and their applications (examples from speech and biological signal process	sing): disrete-time	signals and
systems, signal c	naracteristics in time and frequency domain, Fourier transform, fast algorithms for DFT computation, introduction to digital filter desig	n, digital filtering in	n time and
	frequency domain, decimation and interpolation and their usage in filter banks, basics of LPC analysis. Further details can be foun	d at <a< td=""><td></td></a<>	
	href=http://noel.feld.cvut.cz/vyu/be2m31dspa>http://noel.feld.cvut.cz/vyu/be2m31dspa<:/a> .		
BE4M33MPV	Computer Vision Methods	Z,ZK	6
The course covers	selected computer vision problems: search for correspondences between images via interest point detection, description and matchi	ng, image stitching	ر, detection,
recognition and	segmentation of objects in images and videos, image retrieval from large databases and tracking of objects in video sequences. Thi	s course is also pa	rt of the
inter-university pro	ogramme prg.ai Minor. It pools the best of AI education in Prague to provide students with a deeper and broader insight into the field	of artificial intellige	ence. More

information is available at https://prg.ai/minor.

BE4M33PAL	Advanced Algorithms	Z,ZK	6
Basic	graph algorithms and graph representation. Combinatorial algorithms. Application of formal languages theory in computer science -		1 0
BE4M33SSU	Statistical Machine Learning	Z,ZK	6
	cal machine learning is to develop systems (models and algorithms) for learning to solve tasks given a set of examples and some pr	1 '	1
	al tasks in speech and image recognition. The course has the following two main objectives 1. to present fundamental learning conce	_	
	d estimation and Bayesian learning including their theoretical aspects, 2. to consider important state-of-the-art models for classificati	-	
	how they can be learned by those concepts.		
BE4M35KO	Combinatorial Optimization	Z,ZK	6
The goal is to show	the problems and algorithms of combinatorial optimization (often called discrete optimization; there is a strong overlap with the term	operations researd	h). Followi
the courses on lir	near algebra, graph theory, and basics of optimization, we show optimization techniques based on graphs, integer linear programming	ng, heuristics, appr	oximation
algorithms and st	tate space search methods. We focus on application of optimization in stores, ground transportation, flight transportation, logistics, p	lanning of human i	esources,
	scheduling in production lines, message routing, scheduling in parallel computers.		
BE4M36MBG	Molecular Biology and Genetics	Z,ZK	6
BE4M36SAN	Statistical data analysis	Z,ZK	6
	on the skills developed in introductory statistics courses. It is practically oriented and gives an introduction to applied statistics. It mainly	=	
analysis and model	lling, i.e., the methods that help to understand, interpret, visualize and model potentially high-dimensional data. It can be seen as a	purely statistical co	unterpart
	machine learning and data mining courses.		
BE4M36SMU	,	Z,ZK	6
	sists of four parts. The first part of the course will explain methods through which an intelligent agent can learn by interacting with its		
	arning. This will include deep reinforcement learning. The second part focuses on Bayesian networks, specifically methods for infere		
runuamentai topit	cs from natural language learning, starting from the basics and ending with state-of-the-art architectures such as transformer. Finally introduction to several topics from the computational learning theory, including the online and batch learning settings.	y, and idot part will p	oroviue all
BEAM02BIO	Biosensors	Z.ZK	6
	ces the physical, electronic, biological principles of biosensors and provides information on past, present and future technologies. Va	,	
	c applications (such as detection of glucose, urea, proteins, cells, bacteria, etc.) are explained. In addition, the course introduces the		
	s in biosensors to achieve reliable and sensitive devices for diagnosis at the point of care, in food safety or environmental monitoring		
	challenges and future perspectives for various applications of biosensors.	,	
BEAM17EMC	Introduction to Electromagnetic Compatibility	Z,ZK	6
	ls on problems of electromagnetic compatibility. Students obtain the basic knowledges in the field of electromagnetic compatibility -	1	1
	susceptibility and testing methods. The course leads to gain professional skills in the field of electrical engineering.		
BEAM31ADA	Adaptive signal processing	Z,ZK	6
This course provid	des a basic discourse on adaptive algorithms for filtering, decorrelation, separation and beamforming. The course explains adaptive	algorithms for estir	nation and
prediction, including	g analysis, implementation and practical applications. Next, it describes the algorithms for adaptive decorrelation and separation of	multidimensional si	ignals. Las
	the course provides analysis of adaptive beamforming techniques.
