Recomended pass through the study plan

Name of the pass: Master specialization System Programming, in Czech, 2022

Faculty/Institute/Others:

Department:

Pass through the study plan: Master specialization System Programming, in Czech, version from 2020

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika

Type of study: Follow-up master full-time

Note on the pass: Jako volitelné p edm ty lze zapisovat povinné p edm ty sousedních specializací, verze

2022

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

NI-HSC Side-Channel Analysis in Hardware	Z,ZK	4
This course is dedicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack		I
various kinds of side channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and attacks. They also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel	-	
NI-IAM Internet and Multimedia	Z,ZK	4
The NI-IAM course is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq		
resentation of AV signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u	se case scenarios o	f real-time
audiovisual transmissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effects and the second state of AV transmissions. On the second state of the sec	· ·	
ne quality and latency of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the for audience.	e scene up to the pre	esentation
NI-IBE Information Security	ZK	2
Students learn information and IS/ICT security management systems (ISMS), methods for information access control, and basic norms and international		
understand methods for management of internal and external security threats, for IS/IT security audits, and for application security testing (e.g.	, penetration testing)	
NI-IKM Internet and Classification Methods	Z,ZK	4
i this course, the students get acquainted with classification methods used in four important internet, or generally network applications: in spam filtering n malware detection systems and in intrusion detection systems. However, they will learn more than only how classification is performed when solving		- 1
In malware detection systems and in mitualion detection systems. However, they will learn more than only now classification is performed when solving on the background of these applications, they get an overview of the fundamentals of classification methods. The course is taught in a 2-weeks cycle w	-	
exercises. During the exercises, the students on the one hand implement simple examples to topics from the lectures, on the other hand consult		
NI-IOS Advanced techniques in iOS applications	KZ	4
tudents will learn the latest trends in mobile development technologies for iOS platform. Class covers advanced topics, students need to know all the base	asics from the begin	ners class
BI-IOS.	7 71/	
NI-IOT Internet of Things The subject is focused on the area of hardware and software technologies for the strongly growing computer support of various devices. Its goal is fa	Z,ZK	4 ailable
development elements (Raspberry Pi, Arduino Due) and with the language for efficient application development and modification (G		
NI-IVS Intelligent embedded systems	KZ	4
ntelligent embedded systems course for master's degree is focused on high-level technology embedded systems integrating artificial intelligence. The	course is an advanc	e version
of the Intelligent embedded system fundamentals course for the bachelor degree. The aim of the course is to teach students humanoid robot programm		
evelopment. Lectures provide basis of motion control, sensor reading, application interfaces, robot navigation and development tools. In labs, students combining knowledge of various courses like nature inspired algorithms, data mining algorithms, image recognition and web tech		plications
NI-KOP Combinatorial Optimization	Z,ZK	6
The students will gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not only	,	
also to apply and evaluate heuristics for practical problems.		
NI-KTH Combinatorial Theories of Games	Z,ZK	4
Traditional game theory is a branch of mathematics, which has broad applications in economy, biology, politics and computer science. This theory study (players) of a costain computer science, which has broad applications in economy, biology, politics and computer science. This theory study (players) of a costain computer is a property of a costain computer science by designing a mathematical model and investigating the strategies. The traditional task of algorithms are scienced as a costain computer science and the scien		-
(players) of a certain competitive process by designinng a mathematical model and investigating the strategies. The traditional task of classical game t hich are the states of the game where no player wants to deviate from his strategy. Historically, the second big development in game theory of two-playe	=	
games, was by Conway, Berlekamp and Guy. They developed a theory, originally used for solving end-games in Go, into a full fledged field. The idea is		
otherwise incompatible games can be added, that is, played simultaneously. This led to the algrebraic approach to study combinatorial games. The thin		
ork of Beck, who established the theory of positional games (like tic-tac-toe and hex). In analysis of these game, one cannot escape the brute-force tra		
s no efficient. Beck introduced the "false probabilistic method", which aims to tackhle this problem. In this course we build the foundation of the theory c ames. We focus on theoretical analysis of games and building the theory, not on the programming aspects of game solving algorithms. The course req		
to mathematically analyse, think and proof. The course is also suitable for bachelors student in the third year, who attended introduction to graph theory	-	- 1
looking for research topics.		
NI-KYB Cybernality	ZK	. 5
Students get acquainted with the fundamentals of legislation and international activities in the area of fighting cybercrime. Students will understand the averance are are are are supported and traffic monitoring in the cyberspace. Students will also familiarize themselves with hacker active.		
will also discuss the cooperation of the state agencies and subjects dealing with defence of the cyberspace (especially CSIRT and CE		rie course
NI-LOM Linear Optimization and Methods	Z,ZK	5
tudents learn the applications of optimization methods in computer science, economics, and industry. They are aware of practical importance of linear a		ning. They
re able to work with optimization software and are familiar with languages used in programming of that software. They get skills in formalization of optimization optimization optimization optimization optimization optimization optimization optimization o	•	
science (such as scheduling of tasks to processors, analysis of network flows), distribution and allocation of resources (transportation problems, travell ssues from economics, and modelling of conflicts via the game theory. They get an overview of computational complexity of optimization problems. The	•	
in linear programming.	y get onemation in a	igonumia
NI-LSM2 Statistical Modelling Lab	KZ	5
he topic of LSM2 is advanced multiple target tracking (MTT). This domain covers simultaneous tracking of multiple targets using radar under the present		tracking.
We aim at the state-of-the-art filters, in particular the PHD (Probability Hypothesis Density) and PMBM (Poisson Multi-Bernoulli)		
NI-MLP Machine Learning in Practice	Z,ZK	5
pplying machine learning methods to real projects in practice involves many other necessary tasks - from understanding the intentions of the client to, ide he course guides students through all phases of a project according to the standard CRISP-DM methodology, not only theoretically but also practically	-	
data processing and learn how to describe the whole process from exploration to evaluation of the model performance in the form of a clear and		
NI-MOP Modern Object-Oriented Programming in Pharo	KZ	4
bject-oriented programming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where	-	
used to build complex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills		
of object systems in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development not detition to deepening object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of		
echnologies in terms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involven		
NI-MPI Mathematics for Informatics	Z,ZK	7
The course comprises topics from general algebra with focus on finite structures used in computer science. It includes topics from multi-variate analysis	•	
nulti-variate integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The last top		
lgorithm and their stability analysis. The topics are completed with demonstration of applications in computer science. The course focuses on clear pre	sentation and argun	ientation.

NI-MPJ Modelling of Programming Languages	Z,ZK	5
The analysis, transformation, and code generation processes depend on the semantics of the language; in particular, they are correct if they preserve the course explores the semantics of programming languages. The students will learn the language models with emphasis on functional languages, studer		0 0
he basics of the lambda calculus and here get acquainted with the advanced lambda calculus. The students also get hands-on-experience with semantic	•	
NI-MPL Managerial Psychology	ZK	2
NI-MPR Master Project	Z	7
1. At the beginning of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial task	sks that should be	carried out
during the semester. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end o		
supervisor enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut.cz/s completed and signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the FT topic	-	
is rather general, the immediate tasks the supervisor assigns to the student for the upcoming semester should aim at fine-tuning the FT topic so that the		
approvable at the end of the semester.		
NI-MSI Mathematical Structures in Computer Science	Z,ZK	. 4
Mathematical semantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scott Introduction to category theory.	model of lambda of	calculus.
NI-MZI Mathematics for data science	Z,ZK	4
n this course, students are introduced to those fields of mathematics that are necessary for understanding standard methods and algorithms used in da		died topics
include mainly: linear algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princ	iple, gradient meth	ods) and
selected notions from probability theory and statistics. NI-NLM Neural Language Models	Z	5
n this course, students will learn the technical foundations of the Transformer architecture as well as the practical aspects of using language models. The	_	
students how to use language models to solve problems, make informed risk assessments, and work critically with the scientific lit	erature.	
NI-NMS Neural Networks, Machine Learning and Randomness	Z,ZK	4
Stochastic methods, i.e. methods based on randomness, are extremely important for the construction and training of neural networks as well as a number models. The course "Neural networks, machine learning and randomness" will discuss in sufficient depth a number of specific types of neural networks.		- 1
andomness, as well as a number of specific stochastic methods for neural networks and machine learning. In the final two topics, it explains the general s	,	· · · · · ·
neural networks and shows that, in addition to the use of randomness in neural networks and machine learning, machine learning models, including neural networks and shows that, in addition to the use of randomness in neural networks and machine learning, machine learning models, including neural networks and shows that, in addition to the use of randomness in neural networks and machine learning, machine learning models, including neural networks and machine learning models, including neural networks and shows that, in addition to the use of randomness in neural networks and machine learning, machine learning models, including neural networks and machine learning models, including neural networks and machine learning models.		ised in one
of the most important applications of randomness stochastic optimization methods, which include e.g. popular evolutionary algor NI-NMU New media in art and design	ithms.	3
The course introduces students to the issue of using new media in artistic and design work. Key topics are moving image, internet, computer game an		
familiarize the student with the largest possible range of creative approaches in new media. The subject emphasizes dialogue with students, especially		-
art projects.		
NI-OLI Linux Drivers The Linux Drivers The Linux Drivers The Linux Drivers Linux Drivers	Z,ZK	4 and EPGAs
increase the variability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver developmen		
course provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical		
NI-OSY Operating Systems and Systems Programming	Z,ZK	5
The course covers system programming in UNIX environment. Emphasis is given on kernel development with focus on kernel architecture and kernel de process management, memory management, file operations and architecture of modern file systems, device drivers and network programming. The co	-	
levelopment process, upgrades of existing kernels, kernel booting, debugging using dynamic instrumentation, and techniques to guarantee portability. S	Specifics of kernel a	architecture
n embedded and real-time operating systems are also discussed. Theoretical and general principles are demonstrated on the LINUX kernel. Within labs,	students will work	on projects
focused on development of LINUX kernel modules. NI-PAM Efficient Preprocessing and Parameterized Algorithms	Z,ZK	4
There are many optimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often necess		
exactly in practice. We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often one		
parameter) of the inputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity exponer and polynomially in the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial tin		
which is not possible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solution		
plethora of parameterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pre		
will also not miss out the relations to other approaches to hard problems such as moderately exponential algorithms or approximation		
NI-PDP Parallel and Distributed Programming 21st century in computer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores	Z,ZK	6 n systems
are becoming a ubiquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor		
with architectures of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication oper		۱ ا
environments for parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and on earn the techniques of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course	· ·	-
practical programming in OpenMP and MPI for solving a particular nontrivial problem.	includes a semeste	i project or
NI-PG1 Computer Grafics 1	ZK	4
The course builds on graphic courses (mainly BI-PGA and BI-PGR) and the knowledge from these courses is deepened by state-of-the-art knowledge. The	_	
nterested in advanced computer graphics. Students will gain practical knowledge with realistic texturing and raytracing methods. An integral part of the c articles and their subsequent implementation. The course will be followed by a course PG2 supplementing the knowledge of PG1 on other areas and their subsequent implementation.	•	
NI-PIV Computer Vision	Z,ZK	5
The Computer Vision course focuses on the theoretical and practical mastery of modern methods and algorithms in the field of image data processing. Stu		
the basic principles of computer vision, gradually move to advanced computer vision techniques using deep learning. Emphasis is placed on theoretic	•	
ractical applications and implementation of learned methods during exercises. Topics covered include morphological operations, image filtering, color rep and recognition and segmentation through classical and recent approaches based on deep learning, deep neural networks for computer vision (includi		
motion detection, visual expressiveness (saliency).		
NI-PLS1 Programming Language Seminar	Z	2
The Programming Language Seminar aims to introduce students to research in programming languages. It has the format of a reading group in which		
about programming languages and related fields. Participating students are expected to present a paper of their interest and actively participate in the d	iscussions. The rea	icina aroun l
is a joint venue between FIT and MFF CUNI. It is open to all students and researchers interested in programming language:		anig group

NI-PSD	Public Services Design	KZ	4
ne course will into	oduce students to specifics of UX, Service design and development for public sector. We will look into the design and development pro	ocess from the p	erspective
suppliers (devs a	and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration	with client repre	sentatives.
	Course is aimed at students-designers as well as clients.		
NI-PSL	Programming in Scala	Z,ZK	4
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature		_
Ivance standard	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	libraries e.g. Play	, Cassandr
	Scalaz, etc.		
NI-PVR	Advanced Virtual Reality	KZ	4
	ces advanced parts of the virtual reality. It is a continuation of the already running graphic objects, especially the creation of 3D models		
•	s students to their application in virtual reality. Lectures will focus on virtual reality technology, its use in various applications and will also o	-	
avaliable 3D eng	ines (mainly Unity3D). The course is freely connected with the subject VHS (virtual game worlds), students will be able to apply the kno in virtual reality, or directly create a complex game for VR.	owiedge gained i	n triis subje
NII DVC		7 71/	4
NI-PVS	Advanced embedded systems sed on ARM processors and microcontrollers and their usage in wide range of applications. The course includes a series of advanced	Z,ZK	1
	s storage devices, motor control, system control and industrial communication. The students obtain both theoretical and also practical	=	
vorking with mas	systems.	experiences with	rembedde
NI-PYT	Advanced Python	KZ	4
	urse is to learn various advanced techniques and methods in Python. The course indirectly continues where Programming in Python (
-	it has only tutorials, everything is demonstrated on examples. Classification is based on work in class as well as semestral coursework.		
.,	teachers from Red Hat.		,
NI-ROZ	Pattern Recognition	Z,ZK	5
	nodule is to give a systematic account of the major topics in pattern recognition with emphasis on problems and applications of the sta		_
	idents will learn the fundamental concepts and methods of pattern recognition, including probability models, parameter estimation, an		-

ne Seminar of Coure approached in ticles and other protection of Coure and Other protection of Coure and Other protection of Coure approached in ticles and other protection of Coure approached in ticles and other protection of Coure approached in ticles and oth	Computer Engineering Seminar Master I mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the professional literature and/or work in K. N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers semester. Computer Engineering Seminar Master II mputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to dividually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the professional literature and/or work in K. N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers semester. World Economy and Business World Economy and Business World Economy and Business It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about diff. g business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed for a improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course in parsing and Compilers Upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of var of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. Knowledge Engineering Seminar Master I r you will present a research paper from a top institute / research group to your peers. You will learn what is being cooked in top resear learn how to properly present and read scientific papers. The work in the seminar will prepare you to attend (and profit from) top machinand summer schools, as well as FIT's own	failures and attacs subject is work was. NI-TNN Theory of Neural Networks In this course, we study neural networks from the point of view of the theory of function approximation and from the point of view of probability theory. At first, we recall basic concept pertaining to artificial neural Networks, such as neurons and connections between them, types of neurons from the point of view of signal transmission, network topology, somatic are synaptic mappings, network training, and the role of time in neural networks. In connection with network topology, we get acquainted with its transformation into a canonical topology and in connection with somatic and synaptic mappings, with their composition into mappings computed by the Network, Finally in connection with training, we pay attention to the							
problem of overtrai employed for neural to neural network	ining and to the fact that training is actually a specific optimization task, recalling the most typical objective functions and the most in Inetwork training. We will see the meaninig of all these concepts in the context of common kinds of forward neural networks. Within the ks, we first notice the connection of neural networks to expressing functions of many variables using functions of fewer variables (Kols, we will see how the universal approximation capacity of neural networks can be mathematically formalized as the sets of mapping	nportant optimization e topic approximation olmogorov theorem	on methods on approach , Vituškin				
functions with conti random sample, and	portant Banach spaces of functions, in particular in the spaces of continuous functions, spaces of functions integrable with respect to inuous derivatives, and Sobolev spaces. Within the topic probabilistic approach, we first get acquainted with training based on expect divith probabilistic assumptions about training data with which those two kinds of neural networks can be employed. We will see how all expectancy of network outputs conditioned by its inputs using the expectancy based learning. We recall the strong and the weak later than the strong are the strong and the weak later than the strong are the strong and the weak later than the strong are the strong and the weak later than the strong are the strong and the weak later than the strong are t	ctation and training it is possible to get	based on a an estimate				
· · · · · · · · · · · · · · · · · · ·	n analogy of the strong law of large numbers for neural networks and with the assumptions for its validity. Finally, we recall the central networks, with the assumptions for its validity and with the hypothesis tests based on it. We will see how those tests can be topology of the network.	-	-				
NI-TS1	Theoretical Seminar Master I	Z	4				
l l	r is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classic	cal reading group. T	he students				
are treated individua	ally and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	work with scientific	papers and

	me employment with a foreign institution. The maximum number of credits a student can earn for one internship is 30 credits. This a subjects if the internship exceeds the academic year's dead-line.	•	•				
NIE-BLO	Blockchain	Z,ZK	5				
Students will unders	stand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platfor	ms. They will be ab	le to design,				
code and deploy a	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places	an increased emph	nasis on the				

relationship between blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the students for implementing or supervising implementation of blockchain-based solutions in both academia and business. NIE-PDL ΚZ 5 Practical Deep Learning This course is designed to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine learning framework. Throughout the course, students will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such as computer vision and natural language processing. NIE-PML Personalized Machine Learning Z,ZK Personalized machine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristics and behaviors of individual entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal interests, its principles can be applied to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theoretical, algorithmic, and practical perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial communities. PI-SCN Seminars on Digital Design

This subject deals with problems of realization and implementation of digital circuits - both combinational and sequential. Basic means of description of digital circuits and basic logic synthesis and optimization algorithms are described. Basics of EDA (Electronic Design Automation) systems are given, together with combinatorial problems emerging in EDA.
