Recomended pass through the study plan

Name of the pass: Bachelor specialization Information Security, in Czech, 2024

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Information Security, in Czech, 2024

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the	course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement	students are due	to: -Take ar
active part in the	language instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both the	ne midterm and the	e final term
tests with the succ	ess rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by indi	ividual teachers du	ring the firs
	class of the term.		
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introd	duced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	automata, regular e	expressions
and regular gramn	nars, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the	hierarchy of forma	al languages
and th	ey understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		'
BI-ACM2	Programming Practices 2	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		'
BI-ACM3	Programming Practices 3	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		'
BI-ACM4	Programming Practices 4	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.	ı	ı
BI-ADU.21	Unix Administration	Z,ZK	5
	It the internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. They	,	e differences
between user and	administrator roles. They will get theoretical and practical knowledge of user management and administration, of users access rights,	file systems, disk s	subsystems
processes, mem	ory, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the known	owledge from the l	ectures on
	specific examples from practice.		
BI-ADW.1	Windows Administration	Z,ZK	4
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		'

BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
	s the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cur	· .	_
	ledge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the		
algor	ithms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asym	ptotic notation.	
BI-ALO	Algebra and Logic	Z,ZK	4
'	The course extends and deepens the study of topics touched upon in the basic course in logic.	·	
BI-AND.21	Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-ANG	English Language, Internal Certificate	ZK	2
DI-ANO	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AN		2
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-ANGK	English language, contact preparation for the B2 level exam	7	2
	course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement -	_	_

BI-APJ	Aplication Programming in Java	Z,ZK	4
DI-AFJ	This course is presented in Czech. Advanced technologies in Java.	۷,۷۲	4
BI-APS.21		7.71/	_
	Architectures of Computer Systems	Z,ZK	5
	n the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec		
	processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the princeprocessors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	•	
•	e further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory coher	•	
program. The cours		ence and consiste	ilicy ili sucii
DLADD	systems.	1/7	4
BI-ARD	Interactive applications on Arduino	KZ	4
	ned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applications are students with help of sucileble libraries. The goal of the subject is to about grid a offuge approach set a control or hedded as		-
	ried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded sy		
not only on displa	y of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	s suitable even lor	web and
DI AOD 04	Software Engineering students.	7.71/	-
BI-ASB.21	Applied Network Security	Z,ZK	5
	rse is to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge gainer		
security application	ons like the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After finishing	the course stude	nt will get
DI A) // 04	knowledge of security applications in computer networks.	7.71	4
BI-AVI.21	Algorithms visually	Z,ZK	4
· · · · · · · · · · · · · · · · · · ·	ments other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer so		-
knowledge presente	d in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&li	.;nttp://www.aigovis	sion.org>)
DI DADO4	that make understanding the principles of algorithms easy.		4.4
BI-BAP.21	Bachelor Thesis	Z	14
BI-BEK.21	Secure Code	Z,ZK	5
	arn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting fa		_
	gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every	· -	
	leges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing		
	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the		
BI-BLE	Blender	Z,ZK	4
	ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in	_	-
	ffers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	ics applications) c	ourse.
BI-BPR.21	Bachelor project	Z	1
	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the p		
	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at the		
-	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut		-
•	signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top		
nas reserved is form	nulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assignated and appropriate the semester should be aimed primarily at fine-tuning the assignation	inment so that the	assignment
51.0011	can be supplemented and approved at the end of the semester.	7 714	
BI-CCN	Compiler Construction	Z,ZK	5
	actory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	•	
	nd the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		
BI-CS1	Programming in C#	KZ	4
-	rrse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		
-	, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class defi		-
constructors, metho	ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging	and exception pro	cessing, as
D: 00-	well as work with files are emphasized.		
BI-CS2	C# language and data access	KZ	4
	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros	-	
,	s used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techn	•	
•	ying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L	•	
	. Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u		-
(OKIVI). I his part of	the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model	, Storage Model ar	ıu ıvıappıng
DI OCC	(XML description).	1/7	
BI-CS3	Language C# - design of web applications	KZ	4
i ne students will be	introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of the platform. They will leave to greate Web A Pland to use it by elect programs.	ı ıne aevelopment	possibilities
	on thisplatform. They will learn to create WebAPI and to use it by client programs.		

BI-DBS.21	Database Systems	Z,ZK	5
	oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear	1	latabases
(including integrity	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the	SQL language, as	well as with
its theoretical found	lation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda	mental concepts of	f transaction
processing, contro	lling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced to	to special ways of	storing data
in relational databa	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of datal	base systems, deb	ugging and
	optimizing database applications, distributed database systems, data stores.		
BI-DML.21	Discrete Mathematics and Logic	Z,ZK	5
Students will get a	cquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fro	m set theory will be	e explained.
Special attention is	paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours	se also lays down ti	he basics of
	combinatorics and number theory, with emphasis on modular arithmetics.		
BI-EHA.21	Ethical Hacking	Z,ZK	5
	ourse is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vuln		ir possible
exploitation in con	nputer networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus is	on hands-on expe	rience with
	vulnerabilities testing and the following process of penetration test documentation.		
BI-EHD	Introduction to European Economic History	Z,ZK	3
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	,

BI-EP1.24	Effective programming 1	KZ	4
	The course is taught in Czech.		
BI-EP2	Efficient Programming 2	KZ	4
Continuation of Ef	fficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving indivi-	dual problems are	discussed,
	with the aim to choose the best one and avoid implementation errors.		
BI-FMU	Financial and Management Accounting	Z,ZK	5
The aim of the cou	rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa	rticular accounting	operations,
operations in acco	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modificatio	on of bookkeeping,	description
of economic oper	rations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manage	ment accounting a	re base of
	Business Inteligence moduls in Business information systems.		
BI-GIT	Version control system GIT	KZ	2
Students will be in	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract	ically. In this partic	ular system
even the i	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git s	server administrato	rs.
BI-GIT.21	SW Development Technologies	Z	3
		_	3
This course is aime	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	_	_

the connection with linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenvalues and eigenvectors of a matrix. We will also demonstrate some applications of these concepts in computer science. Mathematical Analysis 1 BI-MA1.21 7 7K 5 We begin the course by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers. Then we study real sequences and real functions of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of functions. This theoretical foundation is then applied to root-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and solution of simple optimization problems (i.e., the issue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical description of complexity of algorithms. Mathematical Analysis 2 The course completes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will learn how to integrate by parts and use the substitution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to the computation of elementary functions with a prescribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, and its analysis using the Master theorem. Finally, we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and Hessian matrix, we study the analytical method of localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integration of multivariate functions. **BI-MIT** Mikrotik technologies The main motivation of the subject stands in the introduction of the RouterOS operating system and some network Mikrotik technologies which are commonly used by the small and middle internet service providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the metallic, optical or wireless links and how to administrate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer networks concepts like protocols and technologies of the data-link, network and transport layer of the OSI model. BI-MMP Multimedia team project This course is presented in Czech. BI-MPP.21 Methods of interfacing peripheral devices Z.ZK 5 The course is focused on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universal serial bus (USB). The course includes both PC side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USB devices, Linux and Windows drivers, simple application development, and APIs of selected devices. Modern Visualisation Technologies The goal of the course is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augmented reality, visualization on high resolution displays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentioned technologies, namely fractal and procedural visualization, scientific data visualization, and 3D model scanning. **BI-OPT** Introduction to Optical Networks Z.ZK Students get basic overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on possible problems with deployment of optical network technology and on their solutions. The course will include the history of optical communications, an overview of passive components (optical fibres, multiplexors, dispersion compensators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission systems). The course will also cover the most up-to-date topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as the accurate time on Internet, ultrastable frequency transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters. Students will solve real tasks from practice. Operations Research and Linear Programming The subject aims to introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundamental optimization technique. Operational research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (such as management). Operating Systems In this course that is a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread implementations, race conditions, critical regions, thread scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS monitoring. They are able to design and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS Windows. BI-PA1.21 Programming and Algorithmics 1 Students gain the ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, structured, pointers), expressions, statements, functions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searching, sorting, and manipulating with linked lists and trees. Programming and Algorithmics 2 Students know the instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, queue, enlargeable array, list, set, table). They learn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e.g., template programming, copying/moving of objects, operator overloading, inheritance, polymorphism). Programing in PHP The course is taught in Czech.. Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices and will use tool that eases development in PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for this course in their 3rd semester of study. BI-PJS.1 JavaScript Programming Main goal of the course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development in Javascript. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for this course in their 4th semester of study. **BI-PJV** Programming in Java Z,ZK 4 This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753). BI-PKM Ζ 4 Introduction to mathematics This course is presented in Czech. BI-PMA Z.ZK 4 Programming in Mathematica Students will be working with modern technical and scientific software. Students will learn how to use different programming styles (functional programming, rule-based programming, etc.), how to create dynamic interactive applications and visualisations, data processing and presentations. BI-PS2 Programming in shell 2 4 Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In addition, they gain a deeper insight into shell and some other particular scripting languages and will get practical experience with shell script programming. BI-PSI.21 Computer Networks Z,ZK The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local networks and in the Internet as well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced network technologies. Students practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux and Cisco IOS.

BI-PST.21 Probability and Statistics Z,ZK Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. They will be able to apply basic models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction they will be able to perform estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistical hypotheses and determining the statistical dependence of two or more random variables. **BI-QAP** Quantum algorithms and programming K7 Course aims at giving students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, on which quantum technologies are based, and algorithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software development kit Qiskit, which is based on Python language. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMM and experience with Python might be an advantage. No previous knowledge of physics is assumed. **BI-QUA Quality Assurance** K7 This course introduces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context of different types of software development and will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should be prepared to perform a test analysis, design a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found in the product under test. BI-SAP.21 Computer Structure and Architecture Z,ZK Students will get acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arithmetic-logic unit, controllers, memory, I/O communication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple processor is practically implemented in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools. Computer Engineering Seminar I The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. BI-SCE2 Computer Engineering Seminar II 7 The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. **BI-SEP** World Economy and Business Z,ZK This course is presented in Czech. The course introduces students of technical university to the international business. It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite. BI-SKJ.21 Scripting Languages Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In addition, they gain a deeper insight into shell and some other particular scripting languages and will get practical experience with shell script programming. BI-SOJ Machine Oriented Languages Students of the course will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimal use of microprocessor's features and efficient cooperation of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of view linked to higher level languages. This knowledge will be used during reverse engineering, optimization, and evaluation of code security. BI-SQL.1 Language SQL, advanced ΚZ 4 Module is based on knowledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In particular stored program unites, triggers, recursive queries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point of view of specialized database structures like indexes, clusters, index-organized tables, and materialized views, as well as from the point of view query optimization. Execution plan and possibilities of its. changes will be discussed. Lectures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Oracle DBMS and partially on PostgreSQL BI-ST1 Network Technology 1 3 The subject is oriented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredited under the Cisco Netacad -CCNA1 - R&S Introduction to Networks. BI-ST2 Network Technology 2 Ζ 3 This course is presented in Czech. BI-ST3 Ζ Network Technology 3 3 Students will further enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented during BI-ST1 and BI-ST2 courses will get further extended in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, predictability, extension beyond a simple topology, security, etc. BI-ST4 Network Technology 4 Students will further enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switching presented during BI-ST1 and BI-ST2 courses got further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, predictability, extension beyond a simple topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a completely other type of network (Non Broadcast Multiple Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and switch firmware, perform password recoveries, and emergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation ways while maintaining the network running. **BI-STO** Storage and Filesystems Z,ZK 4 The student will learn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, and archiving, as so as storage scaling, load balancing and high availability. BI-TAB.21 Applications of Security in Technology The goal of the course is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Students get a broader overview of cybersecurity applications and extend their knowledge from the cryptology, the secure code, and system, network, and hardware security. **BI-TDA** Test driven architecture ΚZ 4 The course is focused on practical examples of how to develop, test, and deploy software with tools like GitLab, Docker, Kubernetes, and more that are well known in the DevOps world. This course has a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occur in the semester project.

BI-TDP.21 Documentation and Presentation KZ 3 The course is focused on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically final university theses. Students learn to create text of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically present it in front of classmates and	
the teacher. The course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14 days of teaching. Within the exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed.	
BI-TEX TEX and Typography Z,ZK 4 This course is presented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of the course focuses on typographic rules.	
BI-TS1 Theoretical Seminar I Z 4	1
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and	
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	4
BI-TS2 Theoretical Seminar II Z 4 Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students	
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	
BI-TS3 Theoretical Seminar III Z 4	
Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and	
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar.	1
BI-TS4 Theoretical Seminar IV Z 4 Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students	
are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and	
other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. BI-TZP.21 Technological Fundamentals of Computers Z,ZK 5	1
Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer structures look like at the lowest	
level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to reduce the consumption; what the	
limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a computer power supply looks like (in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.	
BI-UKB.21 Introduction to Cybersecurity Z,ZK 5	1
The goal of the course is to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic overview of threats in cyberspace and attacker techniques, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace regulations.	
BI-ULI Introduction to Linux Z 2	
Students become familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become familiar with basic commands	
and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (terminal). BI-UOS.21 Unix-like Operating Systems KZ 5	
Unix-like operating systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative functions of multiuser operating	
systems for computers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic properties of this OS family, such as processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of advanced users who are not	
only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting interface, called shell.	
BI-VAK.21 Selected Applications of Combinatorics Z 3 The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the basic courses, we approach the	
issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic data structures. Furthermore,	
with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) informatics. Areas from which we	
will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimization and more. Students will also try to implement solutions to the studied problems with a special focus on the effective use of existing tools.	
BI-VES.21 Embedded Systems Z,ZK 5	1
Students learn to design embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and embedded processors, their integrated peripheral circuits, programming methods, and applications. They get practical skills with development kits and tools.	
BI-VHS Virtual game worlds ZK 4	1
The course leads students to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current students knowledge is furthermore complemented by the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. The course can be followed by	
the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR devices.	
BI-VMM Selected Mathematical Methods Z,ZK 4	
The lecture begins with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then address Fourier series and their properties. Further, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the wavelet transform. We examine	
the linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting examples.	
BI-VR1 Virtual reality I KZ 4 Introduction to Virtual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of virtual worlds communication.	
The course focuses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves computational thinking, empathy and shared social activities.	
BI-VR2 Virtual reality II KZ 3 Continuation of the course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The objective is to develop applications	
for computer science and gamification in various social metaverse and desktop engines.	
BI-ZIVS Intelligent Embedded System Fundamentals KZ 4	
Intelligent embedded system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of the course is to teach students modern humanoid robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion control, sensor reading, application	
interfaces, robot navigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get practical experience with these	
technologies. BI-ZNF PHP Framework Nette - basics KZ 3	-
Students will gain the basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech popular framework. The resulting	
knowledge should serve for the efficient creation of a web backend in PHP language.	

BI-ZPI	Process engineering	KZ	4
	fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of process engineering in this subject. FIT-SEP	World Economy and Business	Z,ZK	4
	esented in Czech. The course introduces students of technical university to the international business. It does that predominantly by c	· -	
	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of d		
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		

FITE-EHD	Introduction to European Economic History	Z,ZK	3
The course introd	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global ecc	nomy through the	description
of the key periods	in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	history. From large	economic
area of Roman Em	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institut	ions is deciphered.	The course
does not cover de	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and o	organizations in his	tory. Class
	meetings will consist of a mixture of lecture and discussion.		
NI-AFP	Applied Functional Programming	KZ	5
	ented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p		_
	and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master		-
ano noo nowaday	necessary competence of a software engineer: the theory and especially the practice.	ing the paradigm.	300011100 u
NI-DDM	Distributed Data Mining	KZ	4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of	•	•
data processing tr	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	ind will be capable	to propose
	approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.		
NI-DZO	Digital Image Processing	Z,ZK	4
This course prese	nts a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg	orithms that are bo	oth easy to
implement and hav	e an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is als	so valuable outside	the domain
of digital image	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR	compression, de-b	olurring in
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv	-	-
	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, a		
NI-IAM	Internet and Multimedia	Z.ZK	4
	internet and wattineda se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq	,	J -
		_	
·	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical upper a Within the lobe, attudents will practically economic on the protocols and varify the off		
	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the eff		
the quality and late	ncy of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording th	e scene up to the p	presentation
	for audience.		
NI-LSM	Statistical Modelling Lab	KZ	5
	ented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p		
available informati	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, an	d analyses of their	properties.
	At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi	s).	
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
	gramming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where	its ability to natural	abstraction
	plex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills	=	
	in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development n		
	ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of		
· ·	rms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involven		
NI-MPL	Managerial Psychology	ZK	2
	, , , , , , , , , , , , , , , , , , ,	Z,ZK	4
NI-MSI	Mathematical Structures in Computer Science		
Mathematical se	emantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scot	t model of lambda	calculus.
	Introduction to category theory.		
NI-OLI	Linux Drivers	Z,ZK	4
The Linux operating	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po	werful processors	and FPGAs
increase the vari	ability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver developme	nt for master's stud	lents. The
со	urse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practic	al experience.	
NI-PDD	Data Preprocessing	Z,ZK	5
Students learn to p	repare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s	ources, such as im	ages, texts,
time series, etc., a	and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris	tics from images o	r from web
	pages.	· ·	
NI-PSD	Public Services Design	KZ	4
	oduce students to specifics of UX, Service design and development for public sector. We will look into the design and development p		
	and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration	=	-
Suppliers (devs a	Course is aimed at students-designers as well as clients.	ii witii cilent repres	entatives.
NI DOI		7 71/	4
NI-PSL	Programming in Scala	Z,ZK	4
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language featur		_
advance standard I	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	l libraries e.g. Play,	Cassandra,
	Scalaz, etc.		
NI-REV	Reverse Engineering	Z,ZK	5
Students will get a	equainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens bef	ore and after the m	ain function
is called. Students	will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated and how they interact with 3rd party libraries.	ated to reverse eng	ineering of
applications wri	tten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be d	edicated to debugg	jers: how
debuggers and de	ebugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer	malware scene. The	ne focus of
	the course is on the seminars, where students will solve practically oriented tasks from the real world.		
NI-SYP	Parsing and Compilers	Z,ZK	5
	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va		_
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		,
NI-TSP	Testing and Reliability	Z,ZK	5
	,		
_	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre		-
uie irituitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ııı-ırı-seir-test equip	inent. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		

NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will gain know	vledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. The	ey will get
acquainted with virtualiza	ation principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to effici	ently operate and o	ptimize the
performance paramete	ers of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect	tive technology toda	ay for the
management of complex	computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills i	n the use of moder	n integratior
	and development tools (Continuous integration and development).
