### Recomended pass through the study plan

### Name of the pass: Bachelor specialization Management Informatics, in Czech, 2024

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Management Informatics, in Czech, 2024

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

#### Number of semester: 1

# List of courses of this pass:

Code	Name of the course	Completion	Credit
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the cour	se corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieveme	nt - students are due	to: -Take a
active part in the lange	uage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in bot	h the midterm and the	final term
ests with the success r	ate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by	ndividual teachers du	ring the fir
	class of the term.		
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduced	to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of fini	te automata, regular e	expression
	context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know	•	ıl languag
and they ur	derstand the relationships between formal languages and automata. They are introduced to the Turing machine and complex	ity classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.		
BI-ACM2	Programming Practices 2	KZ	5
·	This is a selective course for preparing talented student for representation in international programming contests.	•	
BI-ACM3	Programming Practices 3	KZ	5
,	This is a selective course for preparing talented student for representation in international programming contests.	,	
BI-ACM4	Programming Practices 4	KZ	5
'	This is a selective course for preparing talented student for representation in international programming contests.	'	'
BI-ADW.1	Windows Administration	Z,ZK	4
'	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	'	'
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
The course covers the	e basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing	curriculum. It links an	d partially
develops the knowledg	e from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating t	he time and space co	mplexity
algorithm	ns. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the a	symptotic notation.	
BI-ALO	Algebra and Logic	Z,ZK	4
·	The course extends and deepens the study of topics touched upon in the basic course in logic.		
BI-AND.21	Programming for the Android Operating System	KZ	4
	This course is presented in Czech.	'	'
BI-ANG	English Language, Internal Certificate	ZK	2
'	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-	ANĠ	•
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-ANGK	English language, contact preparation for the B2 level exam	Z	2
l l	se corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achieveme	nt - students are due	to: -Take
active part in the lange	uage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in bot	h the midterm and the	final teri
ests with the success r	ate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by	ndividual teachers du	ring the f
	class of the term.		
BI-APJ	Aplication Programming in Java	Z,ZK	4
	This course is presented in Czech. Advanced technologies in Java.		

BI-ARD	Interactive applications on Arduino	KZ	4
	gned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applicat		- 1
	aried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded s	•	
not only on displa	ay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore Software Engineering students.	is suitable even foi	r vveb and
BI-AVI.21	Algorithms visually	Z,ZK	4
	rage in the range of the computer so The second street algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer so		· ·
	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&l		- 1
	that make understanding the principles of algorithms easy.		
BI-BAP.21	Bachelor Thesis	Z	14
BI-BLE	Blender	Z,ZK	4
	ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph		
BI-BPR.21	Bachelor project	7	1
	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	cartial tasks that h	-
_	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at t		
	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvu		
· · · · · · · · · · · · · · · · · · ·	I signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top		
nas reserved is ion	mulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assignated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assignated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assignation for the semester.	Jriment so that the	assignment
BI-CCN	Compiler Construction	Z.ZK	5
	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	,	_
	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching		S
BI-CS1	Programming in C#	KZ	4
-	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		
	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def lods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging		·
constructors, metri	well as work with files are emphasized.	and exception pro	cessing, as
BI-CS2	C# language and data access	KZ	4
The C# language a	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros	oft platform. The s	tudents will
	ts used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current tech	-	
· · · · · · · · · · · · · · · · · · ·	rying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L ). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u	-	
	f the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model	-	- 1
(-, -, -, -, -, -, -, -, -, -, -, -, -, -	(XML description).	, <b>.</b>	
BI-CS3	Language C# - design of web applications	KZ	4
The students will be	e introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of	of the development	possibilities
DI DD0 04	on thisplatform. They will learn to create WebAPI and to use it by client programs.	7.71/	
BI-DBS.21	Database Systems oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They lear	Z,ZK	5
	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the	-	
	lation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda		
	lling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced to		
in relational databa	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of datal optimizing database applications, distributed database systems, data stores.	oase systems, deb	ugging and
BI-DML.21	Discrete Mathematics and Logic	Z,ZK	5
	posciete Mathematics and Logic consists and logic and learn to work with their laws. Necessary concepts fro		
-	paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours	=	•
	combinatorics and number theory, with emphasis on modular arithmetics.		
BI-EHD	Introduction to European Economic History	Z,ZK	3
DI E IA	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	7 71/	4
BI-EJA	Enterprise Java  Industrial Enterprise Java	Z,ZK	4
The course is on a	a database and are accessed through the web interface.	steriis willon are oc	Jillected to
BI-EJK	Enterprise Java and Kotlin	Z,ZK	4
	dvanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise informat		nicroservice
	architecture, that can be deployed to the cloud.		
BI-EP1.24	Effective programming 1	KZ	4
DI EDO	The course is taught in Czech.	1/7	4
BI-EP2	Efficient Programming 2  Fiscient Programming 2  Fiscient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various wave of solving indivi-	KZ	4

BI-EPP.21	Economic Business Processes	Z,ZK	5
	rse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and		
	ronment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the		
establishment of th	ne company, through the management of property and capital structure, financing of the company, determining the cost function of the	e company and lab	or costs, to
BI-FBI.21	evaluating the financial health of the company and its eventual rehabilitation or termination.	Z,ZK	5
	Financial Business Intelligence rse is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for business	,	_
	s for comparison with other companies and management decision process at the tactical and strategic level. The second view is mar	-	- 1
for financial manage	ement and prediction of business development. Management accounting allows monitoring of the financial status and performance of	ousiness activities	over several
accounting period	ds, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital an	d to use value infor	mation to

	lated to future business decisions. The principles of management accounting, described in this course, are the basis of Business Inte information systems, decision support systems, and other knowledge-oriented systems.	elligence modules i	n business
BI-FEM.21	Fundamentals of Economics	Z,ZK	5
	the students to discover basics of economic theory, which will then be used in subsequent courses of economics and management.  of fundamental microeconomic and macroeconomic topics.		
BI-FMU	Financial and Management Accounting	Z,ZK	5
	rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa		
	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification	_	
of economic oper	rations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manage	ment accounting a	re base of
	Business Inteligence moduls in Business information systems.		
BI-GIT	Version control system GIT	KZ	2
Students will be in	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and pract	ically. In this partic	ular system
even the i	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git	server administrato	rs.
BI-GIT.21	SW Development Technologies	Z	3
This course is aime	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	o Git, the information	on manager
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use	Э.	
BI-HAM	HW accelerated network traffic monitoring	KZ	4
This course intro	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The	ne monitoring and a	analysis of
network traffic are	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s	source of information	n and data
for analysis). The g	poals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traff level and to develop their practical abilities in this field.	ic on a hardware a	nd software
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
This course is for	students interested not only in technical scope of computer science, but also in making products usable - for users and for developer	s. Students of this	course can
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.		
BI-HMI	History of Mathematics and Informatics	Z,ZK	3
	This course is presented in Czech.		
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
	This course is presented in Czech.	'	
BI-KAB.21	Cryptography and Security	Z,ZK	5
Students will und	derstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	1 '	keys and
certificates in syste	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in app	lications. Within lab	s, students
will gain pra	actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce	dures of cryptanaly	/sis.
BI-KOM.21	Conceptual Modelling	Z,ZK	5
The course is focu	sed on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te	rms in a domain, tl	ne ability to
categorize and spe	cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struc	tural modeling in th	e OntoUML
notation. Next, they	learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data represent	tation in the Interne	t They also
learn the foundation	the state of the s		i. They also

	ranalysis and design of larger software systems that will be developed in the concurrent course BIE-SF1. Students get hands-to r UML for modeling and solving software problems. Students learn the basics of object-oriented analysis, architecture design a		
	also gain a theoretical basis in the field of project management, estimation of costs of software projects, and methods of their	ŭ	
BI-TDA	Test driven architecture	KZ	4
	n practical examples of how to develop, test, and deploy software with tools like GitLab, Docker, Kubernetes, and more that an		
world. This course ha	as a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occur	r in the semester p	roject.

BI-TDP.21 Documentation and Presentation K7 he course is focused on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically final university theses. Students learn to create text of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically present it in front of classmates and the teacher. The course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14 days of teaching. Within the exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed. TeX and Typography **BI-TFX** 1 This course is presented in Czech. This course gives basics of programming in TeX (plain TeX, ConTeXt, LaTeX, OpTeX, LuaTeX). Te second part of the course focuses on typographic BI-TIS.21 Information Systems 7 7K The goal of this course is to familiarise students with the information systems topic and information systems implementation principles. During the course, students are introduced to "on the market" existing types of systems and their usage in specific industry segments. Students are familiarised with the CRM, ERP, MRP and other types of information systems. The fundamental part of the course is the introduction to key ideas of an information system selection, evaluation of information system benefits, ways of information systems implementation and information system implementation based on the project management principles. The emphasis is on the initial customer analysis, customer insight and ability to decide whether it is better to implement any existing information system or to develop a new one from scratch. These factors determine the information system implementation success. At the end of the course information systems security, operation, support, maintenance, legislation impacts, and government information systems topics are discussed. BI-TS1 Theoretical Seminar I Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. BI-TS2 Theoretical Seminar II Ζ 4 Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. BI-TS3 7 Theoretical Seminar III Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. RI-TS4 Theoretical Seminar IV Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. BI-TZP.21 Technological Fundamentals of Computers 7.7K Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer structures look like at the lowest level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to reduce the consumption; what the limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a computer power supply looks like (in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica. BI-ULI 2 Students become familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become familiar with basic commands and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (terminal). Unix-like Operating Systems Unix-like operating systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative functions of multiuser operating systems for computers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic properties of this OS family, such as processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of advanced users who are not only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting interface, called shell BI-VAK.21 Selected Applications of Combinatorics The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the basic courses, we approach the issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic data structures. Furthermore, with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) informatics. Areas from which we will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimization and more. Students will also try to implement solutions to the studied problems with a special focus on the effective use of existing tools. Virtual game worlds The course leads students to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,). This current students knowledge is furthermore complemented by the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. The course can be followed by the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR devices. **BI-VMM** Selected Mathematical Methods The lecture begins with an introduction to the analysis of complex functions of a complex variable. Next, we present the Lebesgue integral. We then address Fourier series and their properties. Further, we introduce and study the properties of the Discrete Fourier Transform (DFT) and its fast implementation (FFT). We discuss the wavelet transform. We examine the linear programming problem in more detail and its solution using the Simplex algorithm. Each topic is demonstrated with interesting examples. BI-VR1 Virtual reality I Introduction to Virtual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of virtual worlds communication The course focuses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves computational thinking, empathy and shared social activities. BI-VR2 Virtual reality II ΚZ 3 Continuation of the course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The objective is to develop applications for computer science and gamification in various social metaverse and desktop engines. Intelligent Embedded System Fundamentals Intelligent embedded system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of the course is to teach students modern humanoid robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion control, sensor reading, application interfaces, robot navigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get practical experience with these technologies.

FIT-ACM6	Programming Practices 6	KZ	5
I II-MOIVIO	This is a selective course for preparing talented student for representation in international programming contests.	ľΔ	J
FIT-SEP	World Economy and Business	Z,ZK	4
	esented in Czech. The course introduces students of technical university to the international business. It does that predominantly by co		ial countries
nd key regions of	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as i	ndexes of econo	mic freedom
orruption and eco	nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of dis	cussions based	on individua
FITE FUE	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.	7 71	1 0
FITE-EHD	Introduction to European Economic History	Z,ZK	3
	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global ecors in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic h		-
	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial institution	-	
	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and or	•	
	meetings will consist of a mixture of lecture and discussion.		
NI-AFP	Applied Functional Programming	KZ	5
•	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional programming paradigms.		•
the rise nowadays	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, masteri	ng this paradigm	becomes a
NI-DDM	necessary competence of a software engineer: the theory and especially the practice.  Distributed Data Mining	KZ	4
	Distributed Data Will ling n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands o		1
	amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations are	•	•
	approaches to parallelize other algorithms. The course is prezented in czech language.	·	
NI-DSP	Database Systems in Practes	Z,ZK	4
	This course is presented in Czech.	·	'
NI-DZO	Digital Image Processing	Z,ZK	4
•	ents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical algorithms are comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical algorithms are comprehensive overview of modern methods for interactive editing of digital images and video. The stress is put on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, and At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesis Modern Object-Oriented Programming in Pharo orgamming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where it implex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development ne ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work or may of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involvem Managerial Psychology  Mathematical Structures in Computer Science  mantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scott Introduction to category theory.  Linux Drivers  g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining por abhility of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development unser provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical provides knowledge of Linux operating system architecture, principles of development of various types drivers, including pr	at on the effective analyses of the analyses of design and irreds and areas of an interesting propertion to the Pharozek Tanalyses of the pharozek Tanalyses	e use of the e use of the ir properties  4 al abstractio plementatio of interest. NI-SYP	Parsing and Compilers	Z,ZK	5
The module builds u	ipon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	arious variants and	applications
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		
NI-TSP	Testing and Reliability	Z,ZK	5
Students will gain I	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre	pare a test set witl	n the help of
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equi	pment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will gai	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. Th	ey will get
acquainted with vir	tualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	ently operate and o	optimize the
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effecti		-
management of cor	nplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills ir	n the use of moder	n integration
	and development tools (Continuous integration and development).		
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.
