Recomended pass through the study plan

Name of the pass: Bachelor specialization Web Engineering, in Czech, 2024

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Web Engineering, in Czech, 2024

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the co	urse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement	- students are due	to: -Take an
active part in the lar	nguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both t	he midterm and the	e final term
tests with the success	s rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by ind class of the term.	ividual teachers du	iring the first
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduc	ed to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	automata, regular e	expressions
and regular grammar	s, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the	hierarchy of forma	al languages
and they	understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5
'	This is a selective course for preparing talented student for representation in international programming contests.	'	
BI-ACM2	Programming Practices 2	KZ	5
1	This is a selective course for preparing talented student for representation in international programming contests.	1	ı
BI-ACM3	Programming Practices 3	KZ	5
	This is a selective course for preparing talented student for representation in international programming contests.	1	
BI-ACM4	Programming Practices 4	KZ	5
1	This is a selective course for preparing talented student for representation in international programming contests.	1	1
BI-ADW.1	Windows Administration	Z,ZK	4
ı	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	,	ı
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
The course covers	the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cu	1	d partially
develops the knowle	dge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the	time and space co	mplexity of
algorit	nms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asyr	nptotic notation.	
BI-ALO	Algebra and Logic	Z,ZK	4
'	The course extends and deepens the study of topics touched upon in the basic course in logic.		1
BI-AND.21	Programming for the Android Operating System	KZ	4
1	This course is presented in Czech.	1	'
BI-ANG	English Language, Internal Certificate	ZK	2
1	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-AN	ıĠ	1
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2

	,		i
BI-ANGK	English language, contact preparation for the B2 level exam	Z	2
The content of the	course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement -	students are due	to: -Take an
active part in the	language instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both th	e midterm and the	final term
tests with the succ	ess rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by indi	vidual teachers du	ring the first
	class of the term.		
BI-APJ	Aplication Programming in Java	Z,ZK	4
	This course is presented in Czech. Advanced technologies in Java.	_,	-
BI-ARD	Interactive applications on Arduino	KZ	4
	··		1
	gned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applications are applicated as a specific production to embedded systems.	-	-
	aried peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded sy		
not only on displ	ay of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	is suitable even to	r vveb and
	Software Engineering students.		I
BI-AVI.21	Algorithms visually	Z,ZK	4
The course comple	ements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer sc	ience that extend s	substantially
knowledge present	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&l	;http://www.algovis	sion.org>)
	that make understanding the principles of algorithms easy.		
BI-AWD.21	Web and Database Server Administration	Z,ZK	5
	cquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and to		_
_	rice systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exam		
		•	
BI-BAP.21	Bachelor Thesis	Z	14
BI-BIG.21	DB Technologies for Big Data	KZ	5
Students will be int	roduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is f	ocused practically	so that after
finishing the cours	e students were able to choose suitable tools (mostly open source) and techniques,design and implement a simplest reproducible me	thod of data proce	essing (data
collection, transfor	mation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretic	al foundation and	presentation
,	of individual technologies will be supplemented with specific examples from practice.		
חוחור	· · · · · · · · · · · · · · · · · · ·	7 71/	4
BI-BLE	Blender	Z,ZK	4
	ads knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in	_	-
animation. It	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	ics applications) of	ourse.
BI-BPR.21	Bachelor project	Z	1
1. At the beginning	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	partial tasks that h	e / she will
perform during the	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at ti	ne end of the sem	ester. 2. The
·	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut		
	d signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the top	•	,
· ·	mulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assig		
1103 10301 100 13 101	can be supplemented and approved at the end of the semester.	jiiiioni 30 tilat tilo	assignment
DI CON		7 71/	_
BI-CCN	Compiler Construction	Z,ZK	5
	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	•	
understa	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	theme of the clas	S.
BI-CS1	Programming in C#	KZ	4
The goal of the co	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co	nstruction, types	of variables,
operators, array	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class def	nition and class in	stancing,
	ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging		•
	well as work with files are emphasized.	and oxeophen pro	0000g, u0
BI-CS2		KZ	4
	C# language and data access		l
	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros		
,	ts used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techr	•	
of features for que	rrying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L	INQ to Objects, LI	NQ to XML
and LINQ to SQL	.). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u	sing domain-spec	ific objects
(ORM). This part of	of the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model	, Storage Model a	nd Mapping
	(XML description).		
BI-CS3	Language C# - design of web applications	KZ	4
	e introduced to current technologies in web application development on the .NET platform. They will acquire a comprehensive overview of		
	on thisplatform. They will learn to create WebAPI and to use it by client programs.		,
DI DDC 04		7 71/	_
BI-DBS.21	Database Systems	Z,ZK	5
	oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They learn	-	
(including integrity	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the	SQL language, as	well as with
its theoretical found	dation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the funda	mental concepts o	f transaction
processing, contro	ılling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced t	o special ways of	storing data
in relational datab	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of datab	ase systems, deb	ugging and
	optimizing database applications, distributed database systems, data stores.		
BI-DML.21	Discrete Mathematics and Logic	Z,ZK	5
	cquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts from		_
_	s paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The cours	=	-
	combinatorics and number theory, with emphasis on modular arithmetics.	- 3.00 layo down t	
B: =::=		- -: -:	_
BI-EHD	Introduction to European Economic History	Z,ZK	3
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		1
BI-EJA	Enterprise Java	Z,ZK	4
	advanced technologies in the Java programming language. The focus is on technologies for development of enterprise information sys		onnected to
	a database and are accessed through the web interface.		
BI-EJK	Enterprise Java and Kotlin	Z,ZK	4
	•		l
ine course is on a	dvanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise informat	ion ayalemia with f	IIICI OSEI VICE
ı	architecture, that can be deployed to the cloud.		

BI-EP1.24	Effective programming 1	KZ	4
DI EDO	The course is taught in Czech.	V7	1
BI-EP2 Continuation of Et	Efficient Programming 2 icient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving individual problems. Various ways of solving individual problems.	KZ dual problems are	discussed,
BI-FMU	with the aim to choose the best one and avoid implementation errors. Financial and Management Accounting	Z.ZK	5
_	se is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the par	,	_
	ints and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification		
•	ations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manager		-
	Business Inteligence moduls in Business information systems.		
BI-GIT	Version control system GIT	KZ	2
	oduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and practi aplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git s		-
BI-GIT.21	SW Development Technologies	Z	3
This course is aime	d at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		ion manage
BI-HAM	HW accelerated network traffic monitoring	KZ	4
	uces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The		analysis of
network traffic are	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a so	ource of informati	on and data
for analysis). The g	oals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traffi	c on a hardware	and software
	level and to develop their practical abilities in this field.		
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
This course is for	tudents interested not only in technical scope of computer science, but also in making products usable - for users and for developers	s. Students of this	course can
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.		
BI-HMI	History of Mathematics and Informatics This course is presented in Czech.	Z,ZK	3
BI-IDO.21	Introduction to DevOps	Z,ZK	5
	th the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of syst	•	. The course
covers the tools to	support software development, testing and compilation. It also focuses on tools for automating infrastructure management and buildi	ng and deploying	software to
the Cloud. It is an	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquainte used in practice.	ed with modern to	chnologies
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad This course is presented in Czech.	KZ	4
BI-KAB.21	Cryptography and Security	Z,ZK	5
certificates in syste	erstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to ms based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in application of the same of t	ications. Within la	bs, students
	statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advan	,	1
	ly Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a n with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)	nodern, object-fu	
BI-KSA	Cultural and Social Anthropology	ZK	2
	course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversity		_
	earch from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, health shown. The course is presented in Czech.		-
BI-LA1.21	Linear Algebra 1	Z,ZK	5
	tudents to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field		
	ields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian eliminate the linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenvectors and learn to find their inversions using GEM. BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5
	sed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa	, ,	
includes both FC	side and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE drivers, simple application development, and APIs of selected devices.	s devices, Linux ar	ia willaows
BI-MVT.21	Modern Visualisation Technologies	Z,ZK	5
	ourse is to give an overview of modern visualization technologies and their principles, namely technologies related to virtual and augm		
high resolution disp	plays (e.g., SAGE and video mapping) and their applications in practice. Several lectures deal with the content creation for the mentioned	ed technologies, na	mely fractal
DI ODT	and procedural visualization, scientific data visualization, and 3D model scanning.	7 714	
BI-OPT	Introduction to Optical Networks	Z,ZK	doplovment
-	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss k technology and on their solutions. The course will include the history of optical communications, an overview of passive components	-	
=	nsators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission system		-
the most up-to-dat	e topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as	the accurate time	on Internet,
ultrastable freque	ency transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.	Students will solve	real tasks
BI-ORL	from practice.	V7	
_	Operations Research and Linear Programming to introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundar	KZ mental optimization	technique
-	onal research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (suc	•	
BI-OSY.21	Operating Systems	Z,ZK	5
In this course that i	s a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread imp	olementations, race	conditions,
critical regions, thr	ead scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS moni		le to design
DI DA4 04	and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS W		7
BI-PA1.21 Students gain the	Programming and Algorithmics 1 ability to formulate algorithms for solving basic problems and write them in the C language. They understand data types (simple, structure)	Z,ZK	7 Expressions
•	ions, concept of recursion. They learn to analyse simple cases of algorithm complexity. They know fundamental algorithms for searchi		
	with linked lists and trees.	<i>5, 5,</i>	
BI-PA2.21	Programming and Algorithmics 2	Z,ZK	7
	instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack, que	_	- 1
table). They lear	rn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e copying/moving of objects, operator overloading, inheritance, polymorphism).	e.g., template prog	ramming,

Students will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated to reverse engineering of applications written in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be dedicated to debuggers: how debuggers and debugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer malware scene. The focus of the course is on the seminars, where students will solve practically oriented tasks from the real world. NI-SYP Parsing and Compilers The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of various variants and applications of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. NI-TSP Testing and Reliability Z,ZK 5 Students will gain knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prepare a test set with the help of the intuitive path sensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with built-in-self-test equipment. They will gain knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and organizations. They will get acquainted with virtualization principles, tools and technologies that serve	NI-PSL	Programming in Scala	Z,ZK	4
NI-REV Reverse Engineering Students will get acquainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before and after the main function is called. Students will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated to reverse engineering of applications written in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be dedicated to debuggers: how debuggers and debugging work and which methods can be used to detect it.
