## Recomended pass through the study plan

## Name of the pass: Bachelor specialization Computer Engineering, in Czech, 2024

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Computer Engineering, in Czech, 2024

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses: P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assessment, Z - assessment, ZK - examination, L - summer semester, Z - winter semester

Number of semester:	1

	Algorithms visually	Z,ZK	4	
BI-AVI.21		1 '	-	
	ements other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer so		,	
knowledge presente	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org&	it;nttp://www.algovis	sion.org>)	
	that make understanding the principles of algorithms easy.			
BI-AWD.21	Web and Database Server Administration	Z,ZK	5	
Students will get ad	cquainted with the administration of database and web servers and services. They will be able to install, configure, operate, test, and	backup complex da	atabase and	
web serv	rice systems. The principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an exar	nple of a web serve	er.	
BI-BAP.21	Bachelor Thesis	Z	14	
BI-BEK.21	Secure Code	Z,ZK	5	
	earn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting f		•	
theory, students	s gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every	/ program needs to	run with	
administrator priv	vileges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing	data and the relati	onships of	
security and	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the	ne defense against	them.	
BI-BIG.21	DB Technologies for Big Data	KZ	5	
	roduced into the field of Big Data processing where nonrelational (NoSQL) database engines are typically used today. The course is i	1		
	e students were able to choose suitable tools (mostly open source) and techniques, design and implement a simplest reproducible m			
5	mation/aggregation, presentation). Students get acquainted with various architectures for processing and storing big data. A theoretic			
			bresentation	
	of individual technologies will be supplemented with specific examples from practice.			
BI-BLE	Blender	Z,ZK	4	
The course exten	ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those	interested in 3D gra	aphics and	
animation. It c	offers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming grap	hics applications) of	course.	
BI-BPR.21	Bachelor project	7	1	
	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the	partial tasks that h	e / she will	
-	semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at	-		
	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvu			
	d signed form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the to			
has reserved is form	mulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning the assi	gnment so that the	assignment	
	can be supplemented and approved at the end of the semester.			
BI-CCN	Compiler Construction	Z,ZK	5	
This is an introd	uctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	of compilers for st	udents to	
understa	and the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	theme of the clas	S.	
BI-CS1	Programming in C#	KZ	4	
	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental c	1	1	
-				
	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class de			
constructors, meth	ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging	and exception pro	cessing, as	
	well as work with files are emphasized.

BI-EP2	Efficient Programming 2	KZ	4
	ficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving individ		discussed,
	with the aim to choose the best one and avoid implementation errors.		
BI-EPP.21	Economic Business Processes	Z,ZK	5
	rse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and	·	-
	ronment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the	-	
establishment of th	he company, through the management of property and capital structure, financing of the company, determining the cost function of the	e company and lab	or costs, to
	evaluating the financial health of the company and its eventual rehabilitation or termination.		
BI-FBI.21	Financial Business Intelligence	Z,ZK	5
The aim of the cour	se is to acquaint students primarily with financial accounting as a tool for recording business operations and documents for business	analysis, determin	ing its value
	s for comparison with other companies and management decision process at the tactical and strategic level. The second view is man		
	ement and prediction of business development. Management accounting allows monitoring of the financial status and performance of b		
	ds, enables a multidimensional view of business data, enables to control effectively factors affecting the return on invested capital and		
assess options re	lated to future business decisions. The principles of management accounting, described in this course, are the basis of Business Inte	lligence modules i	n business
	information systems, decision support systems, and other knowledge-oriented systems.	7 71/	-
BI-FEM.21	Fundamentals of Economics	Z,ZK	5
The course allows	the students to discover basics of economic theory, which will then be used in subsequent courses of economics and management. I	it contains a gener	al overview
	of fundamental microeconomic and macroeconomic topics.	7 71/	r
BI-FMU	Financial and Management Accounting rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the par	Z,ZK	5
	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modificatio	-	-
-	ations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manager		-
	Business Inteligence moduls in Business information systems.	nom dooodning d	
BI-GIT	Version control system GIT	KZ	2
	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and practi		
	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git s		-
BI-GIT.21	SW Development Technologies	Z	3
	at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	_	-
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		0
BI-HAM	HW accelerated network traffic monitoring	KZ	4
	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. Th	e monitoring and a	analysis of
network traffic are	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a s	ource of informatio	on and data
for analysis). The g	oals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traffi	ic on a hardware a	nd software
	level and to develop their practical abilities in this field.		
BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
This course is for	students interested not only in technical scope of computer science, but also in making products usable - for users and for developers	s. Students of this	course can
	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.		
BI-HMI	History of Mathematics and Informatics	Z,ZK	3
	This course is presented in Czech.		-
BI-HWB.21	Hardware Security	Z,ZK	5
	ith hardware resources used to ensure security of computer systems including embedded ones. Students become familiar with the opera eatures of modern processors, and storage media protection through encryption. They will gain knowledge about vulnerabilities of HW res		
	ring with hardware during manufacture. Students will have an overview of contact and contactless smart card technology including a		
	for multi-factor authentication (biometrics). Students will understand methods of efficient implementations of ciphers.		aleu lopica
BI-IDO.21	Introduction to DevOps	Z,ZK	5
	in the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of syst		-
	support software development, testing and compilation. It also focuses on tools for automating infrastructure management and build		
	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquainte		
	used in practice.		
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad	KZ	4
	This course is presented in Czech.		
BI-IOT.21	Internet of Things	Z,ZK	5
The course focuses	s on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an over	view of sensors an	d actuators,
wireless communi	cation technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT architec	ctures for different	application
areas. Within the c	computer labs, students will gain practical experience with developing simple IoT systems using common development environments	(hardware - ARM,	ESP, STM;
	software - Arduino, Raspberry Pi OS).		
BI-JPO.21	Computer Units	Z,ZK	5
-	their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in detail w		
-	nputer units and processors and their interactions with the environment, including accelerating arithmetic-logic units and using approp	-	
-	e organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, including Iel and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of commu	-	
	d the architecture of the bus system. The problems will be practically evaluated in the labs and with the help of the educational micropro	-	
the environment an	and programmable hardware design kits (FPGA).	grammed process	or simulator
BI-KAB.21	Cryptography and Security	Z,ZK	5
	lerstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to		
	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in appl		-
-	actical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic proce		
BI-KOM.21	Conceptual Modelling	Z,ZK	5
	sed on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te	'	-
	cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struct		-
notation. Next, they	r learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data represent	ation in the Interne	et. They also

learn the foundations of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The DEMO r will be taught. The course is designed with the respect to continuation in software implementations. Recommended optional follow-up c		IN notation
BI-KOT Programing in Kotlin	Z,ZK	4
Kotlin is a modern, statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advar		
The language is fully Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a with minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)	-	tional way
BI-KSA Cultural and Social Anthropology	ZK	2
The one-semester course aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversit	-	
anthropological research from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, healt shown. The course is presented in Czech.	n, history, death, etc	:) WIII De
BI-LA1.21 Linear Algebra 1	Z,ZK	5
We will introduce students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field		-
and also over finite fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian eliminate the connection with linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenvectors of the solution		·
matrix. We will also demonstrate some applications of these concepts in computer science.	Z.ZK	5
BI-LA2.21   Linear Algebra 2 Studenti si v tomto p edm tu rozší í znalosti z p edm tu BI-LA1, kde se pracovalo pouze s vektory ve form n-tic ísel. Zde si zavedeme vektorový pros	I ' I	-
Seznámíme se také s pojmem skalární sou in a lineární zobrazení, což nám dovolí ukázat souvislost s lineární algebrou, geometrií a po íta ovou graf		
bude numerická lineární algebra, kde si ukážeme potíže s ešením soustav lineárních rovnic na po íta i a možnosti, jak se s tímto problémem vypo áda	t s d razem na rozk	lady matic.
Ukážeme si také aplikace lineární algebry v r zných oborech.		
BI-LOG.21   Mathematical Logic	Z,ZK	5
The course focuses on the basics of propositional and predicate logic. It starts from the semantic point of view. Based on the notion of truth, satisfiabilit logical consequence of formulas are defined. Methods for determining the satisfiability of formulas, some of which are used for automated proving, are effectively and the satisfiability of formulas.		
vs. NP problem and Boolean functions in propositional logic. In predicate logic, the course further deals with formal theories, such as arithmetics, and	•	
approach to mathematical logic is demonstrated on the axiomatic system of propositional logic and its properties. Gödel's incompleteness the		-
BI-MA1.21 Mathematical Analysis 1	Z,ZK	5
We begin the course by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine numbers.	Then we study real	sequences
and real functions of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of function		
is then applied to root-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation and	-	
problems (i.e., the issue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical descript BI-MA2.21 Mathematical Analysis 2	Z,ZK	aigontinins. 6
The course completes the theme of analysis of real functions of a real variable initiated in BI-MA1 by introducing the Riemann integral. Students will learn	I ' I	-
use the substitution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem to the		
functions with a prescribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms, and	id its analysis using	the Master
theorem. Finally, we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and h		-
analytical method of localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the integ

data type along with tools available to work with such data. After finishing the course, the students should know how to work with common da         BI-MGA.21       Multimedia and Graphics Applications         Students get acquainted with multimedia technologies and applications for 2D/3D bitmap and vector graphics. During the course, current tools for wor graphics and animation will be introduced. Students learn several basic techniques of creation and editing content in computer graphics, introduction to gra technologies. They learn to use multimedia transmission and representation systems, including real-line multimedia processing. They understand the jor graphics processing cards. They gain a number of practical skills, such as vectorizing raster images, retouching photos, or creating of graphics processing cards. They gain a number of the RouterOS operating system and some network Mikrotik technologies which are commiddle internet service providers (ISPs). The students learn how to use and create the architectures of the network solutions which are based on the m and how to administrate and practically deploy them. The successful completion of this subject requires the previous knowledge of elementary computer near to this course is to introduce students to the basic methods of machine learning. They get theoretical understanding and practical working to data preprocessing and multidimensiona demonstrations, pandas and scikit libraries in Python will be used.         BI-ML1.21       Machine Learning 2         The goal of this course is to introduce students to the selected davanced methods of machine learning 2         Ib equal of this course is to introduce students to the selected davanced methods of reaching experimed learning scenario, they, in pa an eneral networks. In the unsupervised learning scenario students learn project	the data formats us ta, e.g. on the Web. Z,ZK king with images, vi phic formats, and cc orinciple of operatio 3D models. BI-OPT	Introduction to Optical Networks	Z,ZK	4	
e e	overview of optical networking technology with the emphasis on practical utilization in Internet and in network infrastructures, on poss			
of optical network technology and on their solutions. The course will include the history of optical communications, an overview of passive components (optical fibres, multiplexors,				
dispersion compensators, and others), and an overview of active components (optical switches and amplifiers, high-speed coherent transmission systems). The course will also cover the most up-to-date topics presented at premium research conferences, such as ECOC or OFC. Attention will also be paid to new applications, such as the accurate time on Internet,				
	ncy transfer, or sensor networks. The labs will focus on real work with optical components and on measurement of their parameters.			
	from practice.			
BI-ORL	Operations Research and Linear Programming	KZ	5	
The subject aims to	p introduce students to the issues of operational research and primarily to the practical application of linear programming as a fundar	mental optimizatior	technique.	
Operatio	nal research primarily focuses on the use of engineering methods (with a mathematical background) to solve practical problems (suc	ch as management		
BI-OSY.21	Operating Systems	Z,ZK	5	
	a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread imp			
critical regions, thre	ad scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS moni and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS W	• •	he to design

BI-PRS.21 Practical Statistics	KZ	5
The students will be introduced to methods of applied statistics. They will learn how to work with various types of data, perform analyses, and choose mod	-	
will encompass regression and correlation analysis, analysis of variance and non-parametric methods. Students will learn to use the statistical software methods on data from real problems.	e R and will apply	the studied
BI-PS2 Programming in shell 2	Z,ZK	4
Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi into shell and some other particular scripting languages and will get practical experience with shell script programming.	on, they gain a de	eper insight
BI-PSI.21 Computer Networks	Z,ZK	5
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local r	networks and in th	e Internet as
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw	-	Students
practically verify configurations and management of network devices in the lab within the environment of the operating systems Linux a		
BI-PST.21 Probability and Statistics Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. T	Z,ZK	
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction		
estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistica	-	
the statistical dependence of two or more random variables.		
BI-PYT.21 Python Programming	KZ	5
The aim of the course is to get acquainted with basic efficient control and data structures of the Python programming language for text and binary data		
between philosophy of programming in Python and in other programming languages will be explained. Each topic is prepared for students in the format enables greater accent to individual student work. Before each lab, students pass a short test on the last week topic. Four homeworks plus a semester		
the semester.		
BI-QAP Quantum algorithms and programming	KZ	5
Course aims at giving students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, or	n which quantum	technologies
are based, and algorithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software development of the students		
on Python language. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMN might be an advantage. No previous knowledge of physics is assumed.	A and experience	with Python
BI-QUA Quality Assurance	KZ	4
This course introduces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context of	1	1 -
development and will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should		
analysis, design a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found	d in the product ur	nder test.
BI-SAP.21 Computer Structure and Architecture	Z,ZK	5
Students will get acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arith		
memory, I/O communication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple process in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools.	ssor is practically i	mplemented

The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher semester.          BI-SEP       World Economy and Business         This course is presented in Czech. The course introduces students of technical university to the international business. It does that predominantly by c and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of d readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.         BI-SIP.21       Network Programming         The course covers fundamental topics of programming network applications. It consists of 4 parts. The introductory part is focused on low-level programming	comparing individu sindexes of econol iscussions based	ks. 	ne basic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issues.		
lectures will be exp	perimentally verified in computer labs. The course is mainly focused on embedded RT systems, therefore the design kits in the lab are course.	e the same as in th	e BIE-VES
BI-ST1	Network Technology 1	Z	3
	iented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredited	d under the Cisco	Netacad -
	CCNA1 - R&S Introduction to Networks.		
BI-ST2	Network Technology 2	Z	3
	This course is presented in Czech.		
BI-ST3	Network Technology 3	Z	3
Students will furthe	r enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented during B	BI-ST1 and BI-ST2	courses will
get further exten	ded in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, predi	ctability, extension	beyond a
	simple topology, security, etc.		
BI-ST4	Network Technology 4	Z	3
	er enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switching		
-	ot further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased effici		
	topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a completely		
	e Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and switch		· .
recoveries, and er	nergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigatic network running.	on ways while mair	itaining the
BI-STO	Storage and Filesystems	Z.ZK	4
	rn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, and archi	I ' I	-
	load balancing and high availability.	wing, as so as store	age seamig,
BI-SVZ.21	Machine vision and image processing	Z,ZK	5
	are becoming a common part of life by being universally available. Related to this phenomenon is the need to process and evaluate ir		
	s to different types of camera systems and a variety of methods for image and video processing. The course is focused on practical use		
	problems of practice that the graduates may encounter.		Ŭ

BI-VR1	Virtual reality I	KZ	4
Introduction to Virtu	ial Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of	virtual worlds com	munication.
The course focus	es on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves con	nputational thinking	i, empathy
	and shared social activities.		
BI-VR2	Virtual reality II	KZ	3
Continuation of the	course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The obje for computer science and gamification in various social metaverse and desktop engines.	ctive is to develop a	applications
BI-VWM.21	Searching the Web and Multimedia Databases	Z,ZK	5
	c overview about search techniques in the web environment that is interpreted as a very large distributed and heterogeneous storage	1 1	-
-	nformation about search techniques in text and hypertext documents (the web pages themselves) and about feature extraction from		-
knowledge of simila	arity search in multimedia databases (generally in collections of unstructured data). They also learn techniques for programming web sea	arch engines for the	e mentioned
	data types (documents).		
BI-ZIVS	Intelligent Embedded System Fundamentals	KZ	4
-	ed system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of t		
	robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion control and development tools. In labor students program a set of basis tools by using the robot simulates and real based ways to get a	-	
Interfaces, robot na	avigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get p technologies.	nactical experience	e with these
BI-ZNF	PHP Framework Nette - basics	KZ	3
	he basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech po	1 1	-
<b>J</b>	knowledge should serve for the efficient creation of a web backend in PHP language.		5
BI-ZPI	Process engineering	KZ	4
Students will learn	fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of p	rocess modelling a	and they will
	used notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of busi		-
CASE tools. The ro	ole of process engineering for information systems development is discussed as well as its importance in the overall context of inform	ation and business	strategy of
DI 700 04	an enterprise.		
BI-ZRS.21	Basics of System Control	Z,ZK	5
-	an introduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will focus pring and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, description		-
•	ic systems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of creat		
-	linear dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also given		-
	es of stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industrial		
	and digital controllers and PLC control.

	roduction to artificial intelligence with emphasis on symbolic techniques. The design of an intelligent agent and the techniques needer		
	lecision-making level. The intelligent agent in the context of the course can be represented for example by a physical robot, but also be		
	virtual assistant or a character in a computer game. We will not only introduce the basics, but also show the current state-of-the-art di		
BI-ZWU	Introduction to Web and User Interfaces	Z,ZK	4
	This course is presented in Czech.		
BIE-CSI	Introduction to Computer Science	Z	2
	ory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fit		-
	bol students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The go		
	rinciples of computer science for students to understand, early on, what computer science is, why things such as high-level programmer are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer no		
	questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interes		
	than expected, or even less than before.		
BIE-DIF	Differential equations	Z,ZK	5
This course provide	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential so		eseparation
	heorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered with		
polynomial analy	sis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world application	ns. Finally, an introc	duction to

partial differential equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODE and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.	s and PDEs, includ	ling implicit
BIE-EEC English language external certificate	Z	4
The BIE-ECC course can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Eng		
the B2 level of the Common European Framework of Reference for Languages.		-
BIE-IMA2 Introduction to Mathematics 2	Z	2
Students refresh and extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are	able to apply them	in particular
examples.		
BIE-SEG Systems Engineering	Z	0
This is an introductory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic principles of to understand processor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After taking		
understand the difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works, what co		
parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communication.		
BIE-ZUM Artificial Intelligence Fundamentals	Z,ZK	4
Students are introduced to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classi		
space search, multi-agent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algorithm	ms and the neural n	etworks, will
be presented as well.           FI-TOP         Academic writing	Z	2
FI-TOP Academic writing Publishing is an important and required part of research activity. It is not only about obtaining research results but also about applying them in the form		
publications can be useful for students not only in their own publishing activities but also in the preparation of a bachelor's or master's thesis. In the co		-
write a scientific article, what parts such an article should have, and how the peer review process works. Students will also try their hand at presenting and	n article and reviewi	ng someone
else's article. The course will be taught in blocks, with one lecture at the beginning of the semester and one practicum in the middle of the semester.	Dates will be determ	nined based
on the availability of enrolled students.		
NI-AFP Applied Functional Programming	KZ	5
This course is presented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional the rise nowadays and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master		-
necessary competence of a software engineer: the theory and especially the practice.		becomes a
NI-DDM Distributed Data Mining	KZ	4
Course focuses on state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands	on experience with	large scale
data processing framework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations	and will be capable	e to propose
approaches to parallelize other algorithms. The course is prezented in czech language.		
NI-DSP Database Systems in Practes	Z,ZK	4
This course is presented in Czech.           NI-DZO         Digital Image Processing	Z,ZK	4
This course presents a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical a	1 '	1
implement and have an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is a		
of digital image processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDI	R compression, de-l	blurring in
frequency domain, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray	R compression, de-l nversion, context en	blurring in hancement,

frequency domain, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray contineractive as-rigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, interactive as-rigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, interactive as-rigid-as-possible image deformation, texture synthesis, interactive segmentation, colorization, painting, interactive as-rigid-as-possible image deformation, texture synthesis, interactive segmentation, colorization, painting, interactive as-rigid-as-possible image deformation protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical audiovisual transmissions. Within the labs, students will paractically assemble AV transmission chains using HW and SW technologies and verify the ethe quality and latency of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording to for audience.         NI-LSM       Statistical Modelling Lab         The subject is oriented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is available information and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, a A this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelo the Ni-MOP)         Modern Object-oriented Programming in Pharo       Object-oriented programming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where is used to build complex modern apure system Pharo (https://pharo.org	R compression, de- nversion, context en adding depth, alpha Z,ZK quisition of AV sign use case scenarios ffect of various com the scene up to the KZ put on the effective and analyses of their sis). NI-PSL	Programming in Scala	Z,ZK	4
The course introdu	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature	es - e.g.pattern ma	atching and
advance standard li	ibrary. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	libraries e.g. Play,	Cassandra,
	Scalaz, etc.		
NI-REV	Reverse Engineering	Z,ZK	5
Students will get ad	quainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before	ore and after the m	hain function
is called. Students	will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedica	ated to reverse eng	gineering of
	ten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be de		- 1
debuggers and de	bugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer	malware scene. T	he focus of
	the course is on the seminars, where students will solve practically oriented tasks from the real world.		
NI-SYP	Parsing and Compilers	Z,ZK	5
The module builds u	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	rious variants and	applications
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.		
NI-TSP	Testing and Reliability	Z,ZK	5
•	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre		· · ·
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equip	pment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	•	
	rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie		•
	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effecti		-
management of cor	nplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in	the use of moder	n integration
	and development tools (Continuous integration and development).	7 71/	
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.	_
