#### Recomended pass through the study plan

### Name of the pass: Bachelor specialization Artificial Intelligence, in Czech, 2024

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor Specialization Artificial Intelligence, in Czech, 2024

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

#### Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

BI-PHP.1	Programing in PHP	KZ KZ	4
	aught in Czech Main goal of the course is an introduction to PHP - language and technology. Students will learn also best practices a PHP. The course is recommended for students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register f		
development	register for this course in their 3rd semester of study.	or bie 1707.1. Til	by orlouid
BI-PJS.1	JavaScript Programming	KZ	4
Main goal of the	course is an introduction to Javascript programming. Students will learn also best practices and will use tool that eases development	in Javascript. The	course is
	students of BIE-WSI-WI.2015 branch of study and do not have required knowledge to register for BIE-TWA.1. They should register for the of study.		1
BI-PJV	Programming in Java	Z,ZK	4
DI DIAM	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-PKM	Introduction to mathematics  This course is presented in Czech.	Z	4
BI-PMA	Programming in Mathematica	Z,ZK	4
	prking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm	'	1
	etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.		
BI-PRS.21	Practical Statistics	KZ	5
	e introduced to methods of applied statistics. They will learn how to work with various types of data, perform analyses, and choose mod	<del>-</del>	
will encompass re	egression and correlation analysis, analysis of variance and non-parametric methods. Students will learn to use the statistical software methods on data from real problems.	e R and will apply	the studied
BI-PS2	Programming in shell 2	Z,ZK	4
	eneral overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In additi	,	
	into shell and some other particular scripting languages and will get practical experience with shell script programming.		
BI-PSI.21	Computer Networks	Z,ZK	5
	ces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in local required by proceedings that introduce at ideath into powerful as a grant for the principles of order and the principles o		
	es will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw actically verify configurations and management of network devices in the lab within the environment of the operating systems Linux a	_	oluuents
BI-PST.21	Probability and Statistics	Z,ZK	5
	the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variables. T	,	I
models of rando	om variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction	they will be able to	perform
estimations of unk	known distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statistical	hypotheses and o	determining
DI DVT 04	the statistical dependence of two or more random variables.	1/7	_
BI-PYT.21 The aim of the co	Python Programming urse is to get acquainted with basic efficient control and data structures of the Python programming language for text and binary data	KZ a processing. The o	5 differences
	ny of programming in Python and in other programming languages will be explained. Each topic is prepared for students in the format	· -	
•			

enables greater accent to individual student work. Before each lab, students pass a short test on the last week topic. Four homeworks plus a semester work will be assigned during the semester. BI-QAP K7 5 Quantum algorithms and programming Course aims at giving students hands-on experience with quantum computers and their programming. We focus on fundaments of quantum mechanics, on which quantum technologies are based, and algorithms showing advantages and limitations of quantum computing. During tutorials students work in open-source software development kit Qiskit, which is based on Python language. Knowledge of linear algebra at the level of BI-LA1 and BI-LA2 (or BI-LIN) is necessary. Previous completion of BI-MA2 or BI-VMM and experience with Python might be an advantage. No previous knowledge of physics is assumed. **BI-QUA** Quality Assurance This course introduces students to the fundamentals of testing and quality management. Students will learn what the role of a tester is in the context of different types of software development and will experience hands-on application testing using both manual and automated testing. At the end of the semester, the student should be prepared to perform a test analysis, design a set of test scenarios, prepare test data, automate an appropriate portion of the scenarios, and prepare a report on the bugs found in the product under test. Computer Structure and Architecture Students will get acquainted with the basic architecture and units of a digital computer, understand the structure, function, and implementation of arithmetic-logic unit, controllers, memory, I/O communication, methods of data transfers between the units. The logic design and the implementation of a program-controlled simple processor is practically implemented in the labs using programmable circuits (FPGA), a single-chip microcomputer, and modern design (EDA) tools. BI-SCE1 Computer Engineering Seminar I The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. BI-SCE2 Computer Engineering Seminar II The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to failures and attacks. Students are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the subject is work with scientific articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teachers. The topics are new for each semester. **BI-SEP** World Economy and Business 7.7K This course is presented in Czech. The course introduces students of technical university to the international business. It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite. BI-SKJ.21 Scripting Languages Z,ZK 4 Students gain a general overview of available scripting languages, their syntax, semantics, programming style, data structures, pros and cons. In addition, they gain a deeper insight into shell and some other particular scripting languages and will get practical experience with shell script programming. Machine Oriented Languages Students of the course will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimal use of microprocessor's features and efficient cooperation of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of view linked to higher level languages. This knowledge will be used during reverse engineering, optimization, and evaluation of code security. Language SQL, advanced Module is based on knowledge obtained in BI-DBS. Students become familiar with advanced relational and non-relational features of SQL language. In particular stored program unites, triggers, recursive queries, OLAP support, object-relational constructions. Part of the course is dedicated to practical database optimization from the point of view of specialized database structures like indexes, clusters, index-organized tables, and materialized views. as well as from the point of view query optimization. Execution plan and possibilities of its. changes will be discussed. Lectures will usually discuss SQL standard, but many features will be demonstrated on Oracle DBMS. Seminars are based on Oracle DBMS and partially on PostareSQL. Network Technology 1 Ζ BI-ST1 3 The subject is oriented to providing the students basic information and practical skills from the area of digital and IP networks. The subject is acredited under the Cisco Netacad CCNA1 - R&S Introduction to Networks. BI-ST2 Network Technology 2 Ζ 3 This course is presented in Czech. Z BI-ST3 Network Technology 3 3 Students will further enhance their knowledge acquired from previous BI-ST1 and BI-ST2 courses. Principles of routing and switching presented during BI-ST1 and BI-ST2 courses will get further extended in the course. Students will be able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, predictability, extension beyond a simple topology, security, etc. Network Technology 4 Students will further enhance their knowledge already acquired from previous BI-ST1, BI-ST2, and BI-ST3 courses. Principles of routing and switching presented during BI-ST1 and BI-ST2 courses got further extended in BI-ST3. Students were able to start fine-tune protocols' settings to gain certain advantages like increased efficiency, predictability, extension beyond a simple topology, security, etc. This module teaches students to configure and fine-tune Wide Area Networks and to experience a completely other type of network (Non Broadcast Multiple Access) which radically differs from well-known Ethernet (broadcast) type of networks. Students will also manage router and switch firmware, perform password recoveries, and emergency procedures. Also the security aspect is treated; students will learn possible intra- and inter-network attacks and the mitigation ways while maintaining the network running. Storage and Filesystems **BI-STO** 7.7K 4 The student will learn principles and current solutions of storage systems architecture. The module explains principles of data store, protection, and archiving, as so as storage scaling, load balancing and high availability. BI-SVZ.21 Machine vision and image processing Z,ZK 5 Camera systems are becoming a common part of life by being universally available. Related to this phenomenon is the need to process and evaluate image information. The course introduces students to different types of camera systems and a variety of methods for image and video processing. The course is focused on practical use of camera systems for solving problems of practice that the graduates may encounter. **BI-TDA** Test driven architecture ΚZ The course is focused on practical examples of how to develop, test, and deploy software with tools like GitLab, Docker, Kubernetes, and more that are well known in the DevOps world. This course has a strong connection on courses like BI(E)-SI1 and BI(E)-SI2. The main goal of this course is to learn by examples that occur in the semester project. **Documentation and Presentation** The course is focused on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically final university theses. Students learn to create text of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically present it in front of classmates and

FIT-SEP	World Economy and Business	Z,ZK	4
This course is pre	sented in Czech. The course introduces students of technical university to the international business. It does that predominantly by or	omparing individua	al countries
and key regions of	world economy. Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as	indexes of econom	nic freedom,
corruption and eco	nomic development, which are needed for the right investment decision. Seminars help to improve on the knowledge in the form of di	scussions based o	on individual
	readings. It is advised to take bachelor level of this course BIE-SEP as a prerequisite.		
FITE-EHD	Introduction to European Economic History	Z,ZK	3
The course introd	uces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco	nomy through the	description
of the key periods	s in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	history. From large	economic
	pire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial instituti	•	
does not cover de	etailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c	rganizations in his	story. Class
	meetings will consist of a mixture of lecture and discussion.		
NI-AFP	Applied Functional Programming	KZ	5
· ·	sented in Czech. Functional programming represents one of the traditional programming paradigms. Traditional and novel functional p		- 1
the rise nowadays	s and the functional paradigm becomes an important construct of traditionally imperative languages (C++, C#, Java). As such, master	ing this paradigm t	becomes a
NII DDM	necessary competence of a software engineer: the theory and especially the practice.	1/7	
NI-DDM	Distributed Data Mining	KZ	4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands of amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	· · · · · ·	-
data processing in	approaches to parallelize other algorithms. The course is prezented in czech language.	ilu wiii be capable	to propose
NI-DSP	Database Systems in Practes	Z,ZK	4
MI-DOF	This course is presented in Czech.	, Z,ZR	4
NI-DZO	Digital Image Processing	Z.ZK	4
	polynal image Frocessing entra a comprehensive overview of modern methods for interactive editing of digital images and video. It mainly deals with practical alg	, , ,	
=	re an interesting theoretical basis. Visually attractive applications provide better understanding of basic theoretical background that is als		
-	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR		
	abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv		
	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, ac		
NI-IAM	Internet and Multimedia	Z,ZK	4
	se is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acq		
	signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical u	_	
audiovisual transn	nissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effe	ect of various com	ponents on
the quality and late	ency of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the	e scene up to the p	presentation
	for audience.		
NI-LSM	Statistical Modelling Lab	KZ	5
The subject is ori	ented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is p	ut on the effective	use of the
available informati	on and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, an	d analyses of their	properties.
	At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesi		
NI-MOP	Modern Object-Oriented Programming in Pharo	KZ	4
	ogramming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where	•	
	nplex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills		
	in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development no		
	ing object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work of

NI-MPL	Managerial Psychology	ZK	2
NI-MSI	Mathematical Structures in Computer Science	Z,ZK	4
Mathematical se	emantics of programming languages. Data types as continous lattices, Scott topology. Procedures as continuous mappings. The Scott	model of lambda	calculus.
	Introduction to category theory.		
NI-OLI	Linux Drivers	Z,ZK	4
-	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po	•	
	iability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver developmen		ients. The
	ourse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical		_
NI-PDD	Data Preprocessing  orepare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s	Z,ZK	5
	and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris		-
unie senes, etc., a	pages.	lics iroin images of	i iioiii web
NI-PSD	Public Services Design	KZ	4
	roduce students to specifics of UX, Service design and development for public sector. We will look into the design and development produce students to specifics of UX, Service design and development for public sector.		1 1
	and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration		
ouppliolo (dovo c	Course is aimed at students-designers as well as clients.	T Will Chork Topico	ornalivoo.
NI-PSL	Programming in Scala	Z,ZK	4
	uces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature		
	library. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and		- 1
	Scalaz, etc.	3 -31	',
NI-REV	Reverse Engineering	Z,ZK	5
	cquainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before		
_	s will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated and how they interact with 3rd party libraries.		
	tten in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be de		
	ebugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer		
	the course is on the seminars, where students will solve practically oriented tasks from the real world.		
NI-SYP	Description and Operations	· ·	
	Parsing and Compilers	Z,ZK	5
	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va		' '
			' '

NI-TSP	Testing and Reliability	Z,ZK	5
Students will gain	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to pre	pare a test set with	h the help of
the intuitive path se	ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bu	ilt-in-self-test equi	pment. They
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.		
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5
Students will ga	in knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	organizations. Th	ey will get
acquainted with vi	rtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie	ently operate and	optimize the
performance pa	rameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effect	ive technology tod	ay for the
management of co	mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills i	n the use of moder	n integration
	and development tools (Continuous integration and development).		
NI-VYC	Computability	Z,ZK	4
	Classical theory of recursive functions and effective computability.
