Recomended pass through the study plan

Name of the pass: Master specialization Computer Science, in English, 2024

Faculty/Institute/Others:

Department:

Pass through the study plan: Master specialization Computer Science, in English, 2024

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatics

Type of study: Follow-up master full-time

Note on the pass: In each semester enroll in elective vocational or purely elective courses so that you gain a total of at least 120 credits and that the load is evenly distributed between semesters. That means an average of 30 credits per semester.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of ser	mester: 1

of the key period	Introduction to European Economic History duces a selection of themes from the European economic history. It gives the student basic knowledge about forming of the global eco Is in history. As European countries have been dominant actors in this process it focuses predominantly on their roles in the economic	history. From large	economic
	mpire to fragmentation of the Middle Ages, from destruction of WWII to the current affairs, the development of modern financial instituti letailed economic history of particular European countries but rather the impact of trade and role of particular events, institutions and c meetings will consist of a mixture of lecture and discussion.		
Students get to	World Economy and Business duces students of technical university to the international business. It does that predominantly by comparing individual countries and k o know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedor ich are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on indiv take bachelor level of this course BIE-SEP as a prerequisite.	n, corruption and e	conomic
are approached i	Computer Engineering Seminar Master I omputer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance to individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of the professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar teacher semester.	subject is work wi	th scientific
	Mathematics for data science e students are introduced to the domains of mathematics necessary for understanding the standard methods and algorithms used in da linear algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princ selected notions from probability theory and statistics.		
	Data Mining Algorithms es on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students asis is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation sys methods).		-
	Advanced machine learning uces students to selected advanced topics of machine learning and artificial intelligence. The topics present techniques in the field of rec I, control and interconnection of physical laws with the field of machine learning. The aim of the exercise is to familiarize students with	-	-
	Digital drawing troduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, persp ly apply in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course or learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practi	is fit for anyone w	ho wants to
	or learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practi	ee gamea knowled	ge.
practice of NI-DSW Students will work	Design Sprint Composition of the one one of the one of	Z ted prototype in 5 o	2 Jays. During
practice of NI-DSW Students will work the course the s NI-GLR	Design Sprint c on projects using the Design Sprint method, developed by Google. THanks to this method the teams are able to go from idea to valida students will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting wit	Z ted prototype in 5 o h research and fini Z,ZK nce. This course is	2 days. During shing with 4

NI-MVI	Computational Intelligence Methods	Z,ZK	5
Students will unde	erstand methods and techniques of computational intelligence that are mostly nature-inspired, parallel by nature, and applicable to m	any problems. The	y will learn
	how these methods work and how to apply them to problems related to data mining, control, intelligen games, optimizations,	etc.	
NI-NON	Nonlinear Continuous Optimization and Numerical Methods	Z,ZK	5
Students will be int	roduced to nonlinear continuous optimization, principles of the most popular methods of optimization and applications of such method	s to real-world pro	blems. They
	inite element method and the finite difference method used for solving ordinary and partial differential equations in engineering. They		
linear algebraic ec	juations that arise from discretization of the continuous problems by direct and iterative algorithms. They will also learn to implement	these algorithms s	equentially
	as well as in parallel.		
NIE-ADP	Architecture and Design patterns	Z,ZK	5
-	s course is to provide students with both work knowledge about the underlying foundations of object-oriented design and analysis as		-
-	ues, and tradeoffs of advanced software design. In the first part of the course, the students will refresh and deepen their knowledge on the commonly used object-oriented design patterns that represent the best practices for solving common software design problems.		
0	the principles of software architecture design and analysis. This includes the classical architectural styles, component based systems		
will be introduced to	architectures used in large-scale distributed systems.	, and some advanc	eu sonware
NIE-AIB	Algorithms of Information Security	Z,ZK	5
	quainted with the algorithms of secure key generation and cryptographic error (not only biometric) data processing. Furthermore, stude		-
-	tographic protocols (identification, authentication, and signature schemes). Another part of the course is dedicated to malware detection		
	learning in detection systems. The last topic includes practical steganographic methods and attacks on steganographic syste		
NIE-AM1	Middleware Architectures 1	Z,ZK	5
Students will stud	dy new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste	em architecture, we	eb service
architecture and ap	lication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm	unications and hig	h availability
	of applications. This course replaces the course MIE-MDW.		
NIE-AM2	Middleware Architectures 2	Z,ZK	5
Students will learn	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architecture	es, concepts and te	echnologies
	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.		
NIE-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementa	tion units.	
NIE-BKO	Error Control Codes	Z,ZK	5
	Is the basic knowledge of security codes used in current systems for error detection and correction. It provides the necessary mathem	, ,	
-	des and codes for the correction of multiple errors, clusters of errors and whole syllables (bytes). Students will also learn how to imple		ions and
	rections for different types of transmissions (parallel, serial) when storing data in memory and when transmitting over telecommunica		-
NIE-BLO	Blockchain	Z,ZK	5
	stand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platform	=	-
	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places are blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the	-	
	supervising implementation of blockchain-based solutions in both academia and business.	students for imple	inenting of
NIE-BPS	Wireless Computer Networks	Z,ZK	4
	n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad		-
	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle		
	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab		
NIE-BVS	Embedded Security	Z,ZK	5
Students gain basic	knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of cryptography and cryptanalysis.	ographic primitives	in hardware
and software (in em	bedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources	for securing intern	al functions
	of computer systems.		
NIE-CPX	Complexity Theory	Z,ZK	5
Students will lear	n about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the	theory concerning	g practical
	(in)tractability of difficult problems.	·	
NIE-DDW	Web Data Mining	Z,ZK	5
	rn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain		-
techniques for Web	crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overvie	w of most recent de	evelopments
	in the field of social web and recommendation systems.	Z	20
NIE-DIP	Diploma Thesis		30
NIE-DSV	Distributed Systems and Computing	Z,ZK	5
	uced to methods for coordination of processes in distributed environment characterised by nondeterministic time responses of computing		
channels. They lea	rn basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that s data and services, and safety in case of failures.	upport nigh availat	bility of both
NIE-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
	to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with		
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.		
NIE-EHW	Embedded Hardware	771/	5
		<u> </u>	
-	basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the	Z,ZK base of advanced	embedded

NIE-EVY	Efficient Text Pattern Matching	Z,ZK	5
Students get know	ledge of efficient algorithms for text pattern matching. They learn to use so called succinct data structures that are efficient in both acces	s time and memory	complexity.
	They will be able to use the knowledge in design of applications that utilize pattern matching.		
NIE-FME	Formal Methods and Specifications	Z,ZK	5
Students are able	to describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so	tware tools that all	ow to prove
	basic properties of software.		
NIE-GAK	Graph theory and combinatorics	Z,ZK	5
	ass is to introduce the most important topics in graph theory, combinatorics, combinatorial structures, discrete models and algorithms. ne basic principles but also on applications in problem solving and algorithm design. The topics include: generating functions, selected top		
-	theory, introduction to probabilistic method, properties of various special classes of graphs and combinatorial structures. The theory w		
· · · · · · · · · · · · · · · · · · ·	of combinatorics on words, formal languages and bioinformatics.		
NIE-GPU	GPU Architectures and Programming	Z,ZK	5
Students will gain	knowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CU		nvironment,
which is already a	widespread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com	putational structure	es, students
	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.		
NIE-HMI	History of Mathematics and Informatics	Z,ZK	3
	ses on selected topics from calculus, general algebra, number theory, numerical mathematics and logic - useful for today computer sci	-	
NIE-HSC	some relations between computer science and mathematical methods. Some examples of applications of mathematics to computer sc		
	Side-Channel Analysis in Hardware edicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attact	Z,ZK	4 niliar with
	side channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and	-	
	They also get practice in both designing the SCA countermeasures and analyzing the amount and characteristics of the side-channel	•	
NIE-HWB	Hardware Security	Z,ZK	5
The course provid	es the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguard	s against abuse of	the system
-	neans. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Stude	-	dge about
	yptographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	-	
NIE-KOD	Data Compression	Z,ZK	5
	oduced to the basic principles of data compression. They will learn the necessary theoretical background and get an overview of data	-	-
used in practice. I	he overview covers principles of integer coding and of statistical, dictionary, and context data compression methods. In addition, stude lossy data compression methods used in image, audio, and video compression.	ints learn the funda	amentals of
NIE-KOP	Combinatorial Optimization	Z,ZK	6
	gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not onl		
	also to apply and evaluate heuristics for practical problems.	, to concert and mp	
NIE-KRY	Advanced Cryptology	Z,ZK	5
Students will lear	n the essentials of cryptanalysis and the mathematical principles of constructing symmetric and asymmetric ciphers. They will know the	ne mathematical pr	inciples of
random number	generators. They will have an overview of cryptanalysis methods, elliptic curve cryptography and quantum cryptography, which they c	an apply to the inte	gration of
	their own systems or to the creation of their own software solutions.	r	
NIE-LOM	Linear Optimization and Methods	Z,ZK	5
•	an overview of applications of optimization methods in computer science, economics and industrial practice. They will be introduced programming. They will be able to work with optimization software and to master the languages used in its programming. They will be		
	eas of computer science (e.g. task allocation to processors, network flow analysis), resource distribution and allocation (traffic probler		
	verview of computational complexity issues in optimization. Gain a good understanding of linear programming algorithms and selected		
,	algorithms.	0 1 0	U U
NIE-MCC	Multicore CPU Computing	Z,ZK	5
	cquainted in detail with hardware support and programming technologies for the creation of parallel multithreaded computations on mu		
	ed memory, which are today the most common computing nodes of powerful computer systems. Students will gain knowledge of archi		•
techniques used to	preduce the decrease in computing power due to the widening performance gap between the computational requirements of multi-cor		ry interface
NIE-MKY	throughput. On specific non-trivial multithreaded programs, students will also learn the basics of the art of creating these applica		F
	Mathematics for Cryptology deeper knowledge of algebraic procedures solving the most important mathematical problems concerning the security of ciphers. In	Z,ZK	5 se focuses
-	of solving a system of polynomial equations over a finite field, the problem of factorization of large numbers and the problem of discre		
	factorization will also be solved on elliptic curves. Students will further become familiar with modern encryption systems based on		
NIE-MPI	Mathematics for Informatics	Z,ZK	7
The course focuse	s on selected topics from general algebra with emphasis on finite structures used in computer science. It includes topics from multi-variate	analysis, smooth o	ptimization,
	e integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The	-	
numerical algorit	hm and their stability analysis. The topics are completed with the demonstration of applications in computer science. The course focus	es on clear presen	tation and
	argumentation.	7	7
NIE-MPR	Master Project g of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial ta	Z	7 carried out
	er. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end c		
	the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut.cz/s		
completed and sig	ned form must be delivered in person or by email to the SZZ coordinator, who will arrange for the credit to be granted. 3. If the FT topic	that the student ha	as reserved
is rather general	, the immediate tasks the supervisor assigns to the student for the upcoming semester should aim at fine-tuning the FT topic so that t	ne FTT will be com	plete and
	approvable at the end of the semester.	r	_
NIE-MTI	Modern Internet Technologies	Z,ZK	5
Students learn			transfer
	advanced networking technologies and protocols for both local area networks and wide area networks. They get acquainted with rout		
	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile	security.	
NIE-MVI Students will unde	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile Computational Intelligence Methods	security. Z,ZK	5
Students will under	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile	Security. Z,ZK el in nature and are	5 e applicable
Students will under	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile Computational Intelligence Methods rstand the basic methods and techniques of computational intelligence, which are based on traditional artificial intelligence, are parall	security. Z,ZK el in nature and are s will learn how the	5 e applicable

NIE-NSS	Normalized Software Systems	ZK	5
	the foundations of normalized systems theory that studies the evolvability of modular structures based on concepts from engineering		
	r from thermodynamics. Students will understand a set of principles that indicate where violations of stability and entropy-related issue second part of the course, students learn how to construct software architectures using a set of 5 design patterns called elements. Th		
	rmation systems in terms of storing data, executing actions, workflows, connectors, and triggers, while handling violations of the stability		
	This knowledge allows students to realize new levels of evolvability in software architectures.		
NIE-NUR	User Interface Design	Z,ZK	5
	stand the theorical background of human-computer interaction and user interface (UI) design, will learn formal description of UIs, formal		
	ocesures. They get acquainted with graphical, speech, and multimodal UIs. Thanks to the gained knowledge, the students will be able	-	
NIE-OSY	Operating Systems and Systems Programming	Z,ZK	5
	sed on the design and implementation of the basic components that make up modern operating systems. This includes threads, proce calls, interrupts and interactions of SW and HW using drivers. Students will learn the theory of the concept of operating system archit	-	
	kernel architecture. Within the course, they will gain practical experience with the development of a small but fully functional operation		
NIE-PAM	Parameterized Algorithms	Z,ZK	4
-	optimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often necession	-	-
	. We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often one		
	inputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity exponent n the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial tir		
	sible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solution		
plethora of param	neterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pre	esumably) does no	ot exist. We
	will also not miss out the relations to other approaches to hard problems such as moderately exponential algorithms or approximation	n schemes.	
NIE-PDB	Advanced Database Systems	Z,ZK	5
	emselves in problems of evaluation and optimization of SQL queries. The next part of the course deals with new concepts of database ne related new data models (XML, graph databases, column databases) and languages for working with them (XQuery, XPath, CYPH	•	
	the course deals with performance evaluation of database machines. This course is equivalent to the course MIE-PDB.	IER, Gleinin). The	asi pari u
NIE-PDL	Practical Deep Learning	KZ	5
	igned to provide students with a comprehensive understanding of Deep Learning using PyTorch, a popular open-source machine lea		-
the course, studen	ts will develop practical skills in building and training deep neural networks, using PyTorch to solve real-world problems in fields such a	as computer vision	and natural
	language processing.		-
NIE-PDP	Parallel and Distributed Programming	Z,ZK	6
-	omputer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores ibiquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor		
-	es of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication oper	-	-
environments for	parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and or	selected problem	s, they will
learn the technique	es of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course	includes a semest	er project of
	practical programming in OpenMP and MPI for solving a particular nontrivial problem.		_
NIE-PIS	Advanced Information Systems notion of business process logic and its formalization, with business process roles, business rules, and data processing, with the notion	Z,ZK	5
	s and service solution of business logic. They get acquainted with these notions also for the other types of ISs. They learn about agili		
	ce methods for implementation of these ideas in ISs. They understand modern object-oriented methodologies for modelling of busines		-
	processed data, and enterprise ISs. They will get the rules and technologies for successful implementation of IS.		
NIE-PML	Personalized Machine Learning	Z,ZK	5
	chine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristic		
	. is commonly used in applications such as recommender systems, which recommend items to users based on their personal interest other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theore		
	perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial commu	-	ind practical
NIE-REV	Reverse Engineering	Z,ZK	5
Students will lear	n fundamentals of reverse engineering of computer software (methods of executing and initializing programs, organization of executal	ole files, work with	third-party
libraries). Special	attention will be paid to C ++. Students will also become familiar with the principles of debugging tools, disassemblers and obfuscation	n methods. Finally,	the course
	will focus on code compression and decompression and executable file reconstruction.	7 71/	
NIE-ROZ	Pattern Recognition nodule is to give a systematic account of the major topics in pattern recognition with emphasis on problems and applications of the st	Z,ZK	5
	Idents will learn the fundamental concepts and methods of pattern recognition, including probability models, parameter estimation, ar		
NIE-SBF	System Security and Forensics	Z,ZK	5
	roduced to various aspects of system security (principles of endpoint security, principles of security policies, security models, authenti		Students will
also learn about fo	prensic analysis as a tool for investigating security incidents (techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techniques used by malicious software or attackers, forensic analysis techning analysis tec	chniques, and the i	importance
	of memory or file system artifacts for attack analysis and detection).	_

NIE-SIB	Network Security	Z,ZK	5					
The students will g	ain theoretical and practical knowledge and experience in the area of current security threats in computer networks, specifically about	ut detection and de	fense. The					
course explains basic pricipals of security monitoring, packet-based and flow-based analysis, in order to detect anomalies and suspicious network traffic. The course focuses on								
explanation and p	ractical examples of various mechanisms of securing network infrastructure and detection in real time. The course covers general pri	ncipals of handling	detected					
	security events (i.e. incident handling and incident response).							
NIE-SIM	Digital Circuit Simulation and Verification	Z,ZK	5					
Aim of the cours	e is to acquaint the students with principles of digital circuit simulation at RTL (Register Transfer Level) and TLM (Transaction Level M	odeling) levels and	with the					
	properties of proper tools. The course covers today recent verification methods, too.							
NIE-SWE	Semantic Web and Knowledge Graphs	Z,ZK	5					
The students will	earn the most recent concepts and technologies of the Semantic Web. The course will provide an overview of the Semantic Web tech	nnologies, methods	and best					
practices for mod	elling, integration, publishing, querying and consumption of semantic data. The students will also gain skills in creation of knowledge	graphs and their sy	/stematic					
	quality assurance.							
NIE-SYP	Parsing and Compilers	Z,ZK	5					
The module builds u	ipon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	rious variants and a	applications					
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.							
NIE-TES	Systems Theory	Z,ZK	5					
Today, humankin	d has the ability to develop systems of incredible complexity (e.g., trains, microprocessors, airplanes, nuclear power plants). However	, the costs of mana	iging this					
complexity and of e	nsuring the correct behavior of a given system have become critical. A key technique for mastering this complexity is the usage of m	odels that describe	only those					
aspects of the syst	ems that are important for the task at hand, and automated tools for analyzing those models. This subject will present theory and algo	orithms that form th	e basis for					
	the modeling and analysis of complex systems.							
NIE-TSP	Testing and Reliability	Z,ZK	5					
Students will gain k	mowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prep	pare a test set with	the help of					
the intuitive path se	nsitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bui	It-in-self-test equip	ment. They					
	will be able to compute, analyze, and control the reliability and availability of the designed circuits.							
NIE-VCC	Virtualization and Cloud Computing	Z,ZK	5					
	n knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and							
•	tualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie							
	ameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effecti							
management of cor	nplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in	the use of modern	integration					
	and development tools (Continuous integration and development).							
NIE-VPR	Research Project	Z	5					
	of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial tas							
-	er. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the end							
) supervisor fills his/her assessment into the paper "Form to award assessment by an external Final theses (FT) supervisor" (for the							
,	s, then, ensure that the assessment is registered into the information system (IS) by asking their internal FT opponent to award the as							
	the external MT supervisor. In the case the FT opponent is external as well, the assessment will be registered to the IS by the head of the structure of the st	-	-					
for the topic of the	MT. 3. If the FT topic that the student has reserved is rather general, the immediate tasks the supervisor assigns to the student for th aim at fine-tuning the FT topic so that the FTT will be complete and approvable at the end of the semester.	e upcoming semes	ater snould					
		7 71/	7					
NIE-VSM	Selected statistical Methods	Z,ZK	7					
Summary of probat	ility theory; Multivariate normal distribution; Entropy and its application to coding; Statistical tests: T-tests, goodness of fit tests, independent in the statistical tests and the statistical test and te	ience lesi; Kandom	i processes					
	- stacionarity; Markov chains and limiting properties; Queuing theory	7 71/						
NIE-VYC	Computability	Z,ZK	4					
	Classical theory of recursive functions and effective computability.
