Recomended pass through the study plan

Name of the pass: Bachelor Full-Time TUL from 2023/24

Faculty/Institute/Others: Department: Pass through the study plan: Bachelor TUL Full-Time from 2023/24 Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Technology of Aviation Maintenance Type of study: Bachelor full-time Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of s	emester: 1					
Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

List of courses of this pass:

Code	Name of the course	Completion	Credits
11CAL1	Calculus 1	Z,ZK	7
Sequence of real r	humbers and its limit. Basic properties of mappings. Function of one real variable, its limit and derivative. Indefinite integral, Newton inter	gral, Riemann integr	al, improper
	Riemann integral. First-order differential equations, linear differential equations.		
11CAL2	Calculus 2	Z,ZK	5
Line	ar differential equations and their systems, differential calculus of functions of several real variables. Riemann integral in Rn. Line an	d surface integrals.	
11ELMO	Electromagnetic Field and Optics	Z,ZK	5
	Electric field. Electric current. Magnetic field. Electromagnetic field. Optics. Basics of solid-state physics.		
11FYZ	Physics	Z,ZK	5
	Kinematics, dynamics, Newton's laws, force fields, mechanics of continuum, thermodynamics, introduction to electrostatics and e		
11GIE	Geometry	KZ	3
Differential geom	etry of curves - parameterization, the arc of the curve, torsion and curvature, Frenet's trihedron. Kinematics - a curve as a trajectory	of the motion, the v	elocity, and
	acceleration of a particle moving on a curved path.		-
11LA	Linear Algebra	Z,ZK	3
Vector spaces (lin	ear combinations, linear independence, dimension, basis, coordinates). Matrices and operations. Systems of linear equations and their applications. Systems of linear equations and their applications are descent and their applications.		minants and
441400	their applications. Scalar product. Similarity of matrices (eigenvalues and eigenvectors). Quadratic forms and their classific		4
11MSP	Modeling of Systems and Processes stem, external and internal system description, continuous and discrete system, mathematics as a tool, examples of formulation of diffe	Z,ZK	4
	nlinear system, stationary and non-stationary system, causality. Convolutional integral. Laplace and Z transformations. Transfer func		
Linear and no	Discretization of continuous systems. System interconnection.	IION. Stability of LTTS	ystems.
11SCFZ	Seminar of Physics	Z	0
110012	Solving problems on kinematics, particle dynamics, dynamics of particle systems and rigid body. Continuum mechanics, thermo		Ū
11STAT	Statistics	Z.ZK	4
	ility Descriptive statistics Population and sample, limit theorem Point estimate, construction and properties Interval estimates Param	1 '	
	Regression and correlation analysis		
11X31U	Project 1 TUL	Z	1
11X32U	Project 2 TUL	Z	2
11X33U	Project 3 TUL	Z	1
12X31U	Project 1 TUL	Z	1
12X32U	Project 2 TUL	Z	2
12X33U	Project 3 TUL	 Z	1
14ASD	Algorithm and Data Structures	KZ	3
	yze problems, design a theoretical solution to a given problem and write the resulting algorithm using flowcharts, practice reading alg		-
	blean algebra to construct constraints in algorithms. Students will be introduced to the basics of the Python programming language		
	will learn to work with variables of basic data types (integer, floating point and string) and the list data structure in their proc		
14ENIK		1/7	4
	Electronics	KZ	4
Analog and digit	Electronics al representation, radix systems, combinational logical circuits, Karnaugh maps, logical circuits realization, sequential logical circuits		-
• •		, integrated circuits	SSI - VLSI,

		1/7	0
	Constructing with Computer Aid n determination. CAD role in projecting system model. Existing CAD systems on Czech market. Project creation, basic common work	KZ	2 applicatio
and CA systems	Co-ordinated systems, CAD environment skill (basics of constructing, dimensioning, modifications, user interfaces, projecting possibil	• •	
	profiles, drawings with raster foundaments).		
14PRG	Programming	KZ	2
	amming builds on and fully extends the course 14ASD (Algorithmization and Data Structures). The knowledge of the Python program		
-	icipant gains skills and can apply them to solve various follow-up tasks. Main topics: lists, multidimensional arrays, sorting and search		-
	working with date and time, regular expressions, functions and procedures, working with files (CSV, JSON, XML).		
14X31U	Project 1 TUL	Z	1
14X32U	Project 2 TUL	Z	2
14X33U	Project 3 TUL	Z	1
14ZEL1	Electronics Basics 1	 Z,ZK	5
	s, electron theory, static electricity, electrical conductivity and terminology, electrical resistance, resistor, capacity and capacitor, induc		-
	ity method, superposition, node-voltage method, mesh - circuit method, AC current, characteristics of AC waveforms, 3-phase el. pov		· •
·	symbolic method, power, filters.		
14ZEL2	Electronics Basics 2	Z,ZK	4
roduction of electr	city and the DC power sources, magnetism, DC motors and generators, AC motors (synchronous, asynchronous, 1-phase, 3-phase), s	tepper motors, Bl	LDC mot
	AC generators.		
14ZLEN	Basics of Electronics	KZ	3
Semiconductors, I	N junction, diodes, rectifiers, SCR, diac, triac, Zener diode, Schottky diode, photodiode, bipolar junction transistor, transistor circuits,	unipolar junction	tranzisto
and circ	its, technology of integrated circuits, feedback theory, operational amplifiers, printed circuit boards, servo-systems, oscillators, switch	ing power suplies	S.
15JZ1A	Foreign Language - English 1	Z	3
ammatical Struct	res and Style. Selection of conversation topics relating to transportation sciences. Extending vocabulary, developing perceptive and con		Elemen
	stylistics forms. Oral and written presentation of original research. Academic text principles and reading comprehension. Principles of	rhetoric.

Compass, gyroscop	bic instruments (turn indicator, attitude indicator, directional gyro), inertial instruments, recording and monitoring systems, warning systems (autopilot, flight director, autothrust), FMS, flight envelope protection, communication systems, flight computers. Instrumentation 1 n principles of instrumentation, electronic displays, basics of measurement - sensitivity and errors, engine instrumentation (pressure w measurement, torque and EPR measurement), indication in other aircraft systems (position, fire and icing indication, vibration mom monitoring, aerometric instruments (sensors, altimeter, air speed indicator, VSI, ADC). Training Course 1 Tools identification and their use. Various material treatment. Joining methods for different joints and their removal. Training Course 2 Special tools and measurement equipment identification and their use. Basics of machine-tool control. Aircraft Maintenance Technology 1 course, which introduces students to the basic techniques of joining both metallic and non-metallic materials. These techniques for cables, pipes and hoses to aircraft are presented. Aircraft Maintenance Technology 2 the course introduces all currently used inspection methods, including non-destructive ones, that are used in aviation. Focus is also or ents are also introduced to aircraft handling methods and the effect of the environment on the operation of the aircraft. Methods of weig are introduced, including the determination of its centre of gravity. Aircraft Maintenance Technology 3 dents with a detailed overview of organisations involved in heavy aircraft maintenance, maintenance planning and also technical docraft so two to deal with various aircraft system failures as well as various structural damage and aircraft modifications. Students are also introduces to organisations involved in heavy aircraft maintenance, maintenance planning and also technical docraft so the daviange and aircraft modifications. Students are also introduces to deal with various aircraft system failures as well as vario	stems (TCAS, GF ZK gauges, thermom itoring, pressurise Z Z KZ inly riveting, weldir or fitting springs, g KZ n the issues of ma ghing and balancir KZ umentation. Last t	WS), AFCS

	Turbine Engines 2	Z,ZK	7
Second part of the	course is focused on the explanation and description of the purpose, operation and construction characteristics of following aircraft tur	bine engines uti	ility systems
- lubrication system	m, cooling and internal air systems, fuel systems, starting and ignition, controls and instrumentation. Purpose, operation principles and	d construction s	chemes of
	turboprop engines, turboshaft and auxiliary power units.		
21UPUL	Introduction to Aircraft Maintenance Technology	Z	3
Students are given a	an overview of safe work practices as well as an insight into the history of aircraft maintenance. In addition, tools used in heavy aircraft	maintenance ar	e introduced
as well a	s basic care procedures. A significant portion of the course is devoted to technical drawings as well as the Electrical Wiring Inspection	System (EWIS).
21V	Aircraft Propellers	Z,ZK	6
	Theory of propeller blade, propeller load, propeller construction, control of blade angle, de-icing system, maintenance and repair of pro-	opellers.
