Recomended pass through the study plan

Name of the pass: SpaceMaster 2024-2030 - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Pass through the study plan: Erasmus Mundus Master Course - SpaceMaster 2024-2030

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Cybernetics and Robotics Type of study: Follow-up master full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BE3M35SPC	Space Communication	Z,ZK	8	2P+2S	Z	Р
BE3M35SPP	Space Physics	Z,ZK	7	2P+2S	Z	Р
BE3M35SSD	Spacecraft System	Z,ZK	8	2P+2S	Z	Р
BE3M35TSS	The Solar System	Z,ZK	7	2P+2S	Z	Р

Number of semester: 2

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

List of courses of this pass:

Completion Credits

Name of the course

Code

		•	
BDIP30	Diploma Thesis	Z	30
Independent final of	ner branch of study	, which wi	
be specified b	by branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the comprehenses	ensive final examir	ation.
BE3M35DRS	Dynamics and Control of Networks	Z,ZK	6
This course res	ponds to an ever-increasing demand for understanding contemporary networks large-scale complex systems composed of many con	mponents and sub	systems
nterconnected into	a single distributed entity. Herein, we will consider fundamental similarities between diverse areas such as e.g. forecasting the sprea	ad of global pander	nics, pub
	nd manipulation of communities through social media, formation controls for unmanned vehicles, energy generation and distribution in p	•	
	ssues goes far beyond the boundaries of any single physical, technological or scientific domain. Therefore, we will analyze phenome		
•	economic and biological networks. For such networked systems, the resulting behavior depends not only on the characteristics of the		
	rsical or logical interactions, but also on a precise way those components are interconnected the detailed interconnection topology. For		-
	uces fundamental theoretical and abstract computational network analysis concepts; in particular, the algebraic graph theory, network		
undamentai netwo	ork algorithms. The second part of the course subsequently views networks as dynamical systems, studies their properties and ways	in which these are	controlle
DEOMOSELO	using mainly methods of automatic control theory.	7.71/	
BE3M35ELS	Electronics in Space	Z,ZK	8
	Introduction to Spectroscopy and Radiative Transfer	Z,ZK	8
