Recomended pass through the study plan

Name of the pass: Branch Applied Electrical Engineering - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering Department: Pass through the study plan: Electrical Engineering, Power Engineering and Management - Applied Electrical Engineering 2016 Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Electrical Engineering, Power Engineering and Management Type of study: Bachelor full-time Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assessment, Z - assessment, ZK - examination, L - summer semester, Z - winter semester

Number of sem	nester: 1

List of courses of this pass:

Code	Name of the course	Completion	Credits
A003TV	Physical Education	Z	2
B0B01DRN	Differencial Equations and Numerical Analysis	Z,ZK	4
This course introdue	ces students to the classical theory of ordinary differential equations (separable and linear ODEs) and also to bsics of numerical meth	ods (errors in calc	ulations and
stability, numerica	solutions of algebraic and differential equations and their systems). The course takes advantage of the synnergy between theoretic	al and practical po	int of view.
B0B01KAN	Complex Analysis	Z,ZK	5
The course is an	introduction to the fundamentals of complex analysis and its applications. The basic principles of Fourier, Laplace, and Z-transform a	are explained, inclu	iding their
	applications, particularly to solving differential and difference equations.		
B0B01LAG	Linear Algebra	Z,ZK	8
	he initial parts of linear algebra. Firstly, the basic notions of a linear space and linear mappings are covered (linear dependence and inde	•	
etc). The calculus of	f matrices (determinants, inverse matrices, matrices of a linear map, eigenvalues and eigenvectors, diagonalisation, etc) is covered		ons include
	solving systems of linear equations, the geometry of a 3D space (including the scalar product and the vector product) and S		1
B0B01MA1	Mathematical Analysis 1	Z,ZK	7
	The aim of the course is to introduce students to basics of differential and integral calculus of functions of one variable.		
B0B01MA2	Mathematical Analysis 2	Z,ZK	7
The subject cover	s an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals. series and power series with application to Taylor and Fourier series.	Other part contair	ns function
B0B01STP	Statistics and Probability	Z,ZK	5
	burse is to introduce students to the fundamentals of probability theory and mathematical statistics, their computational methods as		s of these
	mathematical tools to practical examples.		
B0B16ET1	Ethic 1	KZ	4
Aim of this subject i	s to provide the students an orientation not only in general problems of ethics but above all to offer instructions for solving various situ	ations of human li	fe. Essential
parts of	the subject are discussions in which students can react to lectures but also to actual questions coming with news and look for the co	ommunal answers.	
B0B16FI1	Philosophy 1	KZ	4
We deal with the	most important persons, schools and ideas of ancient philosophy. We are concerned especially on transdisciplinary nature of philos	ophy and connecti	on of old
	philosophical thoughts with recent problems of science, technology, economics and politics.		
B0B16FIL	Philosophy	ZK	2
We deal with the	most important persons, schools and ideas of ancient philosophy. We are concerned especially on transdisciplinary nature of philos	ophy and connecti	on of old
	philosophical thoughts with recent problems of science, technology, economics and politics.		
B0B16HI1	History 1	KZ	4
B0B16HT1	History of science and technology 1	KZ	4
B0B16HTE	History of technology and economic	ZK	2

B0B16MME	Macro and Microekonomics	Z,ZK	4
	ns, market, law of demand, law of supply, market equilibrium, price regulation, price and income elasticities, consumer's behavior, produ		
profit, market failu	re, monopoly, government macroeconomic policy, gross domestic product, multipliers, money, inflation, banking system, monetary po	olicy, labor market,	business
DODACMOL	cycle, fiscal policy, foreign trade policy, comparative advantage, CR and EU, Euro.	71/	0
B0B16MPL	Psychology for managers	ZK	2
B0B16MPS	Psychology	Z,ZK	4
B0B99PRP	Procedural Programming	Z,ZK	6
B1B02FY1	Physics 1	Z,ZK	8
	physics at the Faculty of Electrical Engineering - Physics 1, is devoted to the introduction into two important areas of physics. The firs is the electric and magnetic field. Within the framework of the classical mechanics, the students study the particle kinematics; dynamic		
	nd rigid bodies. The students should be able to solve basic problems dealing with the description of mechanical systems, which they	-	-
-	al mechanics is followed by the relativistic mechanics, electric and magnetic field - both stationary as well as non-stationary. The stud	-	
in this course in the	study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the knowledge gained in this course consecutive course Physics 2.	is required for the	study of the
B1B02FY2	Physics 2	Z,ZK	7
The course Physic	2 is closely linked with the course Physics 1. Within the framework of this course the students will first of all learn foundations of the	rmodynamics. Foll	owing topic
-	es - will give to the students basic insight into the properties of waves and will help to the students to understand that the presented d	-	
	er in spite of the waves character. Particular types of waves, such as acoustic or optical waves are the subjects of the following section		
	ill complete the student?s general education in physics. The knowledge gained in this course will help to the students in study of sucl puter vision, measuring technique and will allow them to understand the principles of novel technologies and functioning of new elec		FODOLICS,
B1B13MVE	Materials for Power Electrical Engineering	Z,ZK	5
	description of basic properties and basic types of materials for electrical engineering is carried out. Types of conductors, supercondu	· · ·	
	niconductors, which are used in power electrical engineering, are presented. The stress is put on relationships between properties, to	, ,	0
student will meet,	n higher detail, with ceramics for electrical engineering, with properties of mica, glass and their applications, with environmental conc	ductive joining, with	n materials
	for thin and thick films and with selected nanomaterials and their applications.		
B1B13PPS	Industrial computer systems	Z,ZK	4
	ed on basic knowledges about computer control systems used in electrotechnic engineering and energetics. Students works with har		
	oftware tools and application examples. There are presented elementary digital circuits, the representation of numbers and their proc ck of microprocessor and microcomputer. The single chip microcomputer, embedded application, industrial PC and design to industria	-	-
B1B13PTE	Advanced technology in electrical engineering	Z,ZK	4
	is oriented on selected materials and technics which are offering a new properties and facilities to electrical products. New supercon-		
	composites, materials with memory of form, inteligent polymers, materials and structures based on nanoparticles. Selected types of be		
	practice.		
B1B13SEZ	Electrochemical Sources and Photovoltaics	Z,ZK	4
	zes students with the basic principles of electrochemical sources and photovoltaic cells and systems. At the beginning, the emphasis		-
	quivalent circuits and mathematical description. In the next section, the basic types of electrochemical sources and their technical param	-	
-	become familiar with the technology of photovoltaic cells and modules. Another chapter is devoted to the basic applications such as so urse, students become familiar with economical and technological implications of the combination of solar systems and electrochemi		e end of the
B1B13VST	Technology in Electrical Engineering	Z,ZK	5
	s in electrical engineering will be characterized, their arrangement and basic technologies for mechanical joints and plastic parts. Mar	· · ·	
	rocesses will also been presented. Next part of a course will be focused on basic technologies for semiconductors including power in	-	
	technologies using plasma, packaging and basic assembly technologies will also been presented.	tegration. Beam te	chnologies,
B1B13VVZ		tegration. Beam te	chnologies,
