Recomended pass through the study plan

Name of the pass: Specialization Computer Games and Graphics - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Pass through the study plan: Open Informatics - Computer Games and Graphics 2018

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Open Informatics Type of study: Bachelor full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L): KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

List of courses of this pass:

	Name of the course	Completion	Credits
B0B01LAG	Linear Algebra	Z,ZK	8
The course covers the	e initial parts of linear algebra. Firstly, the basic notions of a linear space and linear mappings are covered (linear dependence and inde	ependence, basis,	coordinates
etc). The calculus of	matrices (determinants, inverse matrices, matrices of a linear map, eigenvalues and eigenvectors, diagonalisation, etc) is covered		ons include
DODO4L CD	solving systems of linear equations, the geometry of a 3D space (including the scalar product and the vector product) and S\		5
B0B01LGR	Logic and Graphs lsics of mathematical logic and graph theory. Syntax and semantics of propositional and predicate logic are introduced. The importanc	Z,ZK	_
This course covers ba	and of the relationship between a formula and its model is stressed. Further, basic notions from graph theory are introduced.		onsequence
B0B01MA1	Mathematical Analysis 1	Z,ZK	7
	The aim of the course is to introduce students to basics of differential and integral calculus of functions of one variable.	,	ļ
B0B01MA2	Mathematical Analysis 2	Z,ZK	7
The subject covers	an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals.	Other part contain	ns function
	series and power series with application to Taylor and Fourier series.		
B0B01PST	Probability and Statistics	Z,ZK	7
B0B33OPT	Optimization	Z,ZK	7
The course provides a	an introduction to mathematical optimization, specifically to optimization in real vector spaces of finite dimension. The theory is illustrated when the transfer of the trans	ed with a number of	of examples
B0B35APO	You will refresh and extend many topics that you know from linear algebra and calculus courses. Computer Architectures	Z,ZK	5
	'	Z,ZK	6
B0B36DBS	Database Systems ed as a basic database course mainly aimed at the student ability to design a relational data model and to use the SQL language for	,	_
-	o choose the appropriate degree of transaction isolation. Students will also get acquainted with the most commonly used indexing t		
data querying and te	architecture and their management. They will verify their knowledge during the elaboration of a continuously submitted seminar	•	ioc oyotom
B0B36PJV	Programming in Java	Z,ZK	6
	the basics of algorithms and programming from the first semester and introduces students to the Java environment. The course also		_
of the Java language.	The topics of the course includes exceptions, event handling, and building a graphical interface. Basic library methods, working with	h files and using ge	eneric type:
will be introduced. An	important topic is models of multithreaded applications and their implementation. Practical exercises of practical skills and knowledge	ge of Java is tested	d in the forn
of solving partial task	s and semester work, which will be submitted continuously through the source code version control system. The semester work so	oring consists of p	oints for th
Cr	orrectness and efficiency of the code, as well as points that take into account the quality of the source codes, their readability and r	eusability.	
B0B36PRP	Procedural Programming	Z,ZK	6
· · · · · · · · · · · · · · · · · · ·	nies basic programming emphasizing the data representation in computer memory. Furthermore, the concepts of linked data structur	-	-
•	dents master the practical implementation of simple individual tasks. The course emphasizes acquiring programming habits for creative the state of the course of the cours	•	
· -	e time, the effort is to build students an overview of the program operation, data model, memory access, and management. Therefore	· -	
· · · · · · · · · · · · · · · · · · ·	a direct link between the program data structures and their representation in the computer memory. Students will get acquainted not ith debugging and profiling. Labs aim to acquire practical skills of implementing simple individual tasks, emphasizing functionality an		-
•	nce is developed by a set of homework with the possibility of optional and bonus assignments. The final task is an integration of a k		
	ementations. Evaluation of coding style motivated by writing legible, understandable, and maintainable codes is also a part of the so		3 3
B0B39PGR	Computer graphics programming	Z,ZK	6
B4B01DMA	Discrete Mathematics	Z,ZK	5
-	s meet some important topics from the field of discrete mathematics. Namely, they will explore divisibility and calculations modulo n,	,	
	s, cardinality of sets, induction, and recurrence equations. The second aim of this course is to teach students the language of math		
	actively, and introduce them to mathematics as science.		-
B4B33ALG	Algorithms	Z,ZK	6
In the course, the algo	orithms development is constructed with minimum dependency to programming language; nevertheless the lectures and seminars		. Basic dat
types a data structu	ures, basic algorithms, recursive functions, abstract data types, stack, queues, trees, searching, sorting, special application algorith	ms, Dynamic prog	gramming.
	Students are able to design and construct non-trivial algorithms and to evaluate their effectivity.		
		1.77	
B4B33RPH	Solving Problems and other Games	KZ	6

B4B35OSY	Operating Systems	Z,ZK	4
Lecture introduces	operation system's basic concepts and principles as processes, threads, communication and synchronization, virtual memory, driver	rs, file systems, b	asic security
aspects. These topi	ics are theoretically described and demonstrated on Linux and Windows OS with multi-core systems. Practical exercises from OS in	C programming la	anguage will
	be solved on labs. Students will work with Linux OS and micro-kernel NOVA.		
B4B36PDV	Parallel and Distributed Computing	Z,ZK	6
B4B36ZUI	Introduction to Artificial Intelligence	Z,ZK	6
The aim of the cours	rse is to cover the basics of symbolic artificial intelligence. We will focus on algorithms of informed and uninformed state space search	h, problem repres	entation and
solving, representa	ation of knowledge using formal logic, methods of automated reasoning, and an introduction to Markov decision making, and to two-	player games. Th	s course is
also part of the in	nter-university programme prg.ai Minor. It pools the best of AI education in Prague to provide students with a deeper and broader insi	ight into the field	of artificial
	intelligence. More information is available at https://prg.ai/minor.		
B4B38PSIA	Computer Networks	Z,ZK	5
B4B39HRY	Computer Games	Z,ZK	6
Students familiarize	themselves with the issues encountered during programming computer games. They learn topics such as 3D model representation, a	animations, collisi	on detection,
	and real-time rendering in the context of computer games development. During exercises they will develop a computer game in team	s: from the game	concept and
physical simulation,	and real time rendering in the context of computer games development. Burning exercises they will develop a computer game in team	U
