Recomended pass through the study plan

Name of the pass: Specialization Technological Systems - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering Department: Pass through the study plan: Electrical Engineering, Power Engineering and Management - Technological Systems

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Electrical Engineering, Power Engineering and Management

Type of study: Follow-up master full-time

Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assessment, Z - assessment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

Transients - switch nduction machine, starting and speed control. Influence of BE1M14MDS1 The course deals with combining knowledge of the dynam of dynamic syst BE1M14SSE The aim of the course is to acquaint students with forms of BE1M14SSE The aim of the course is to acquaint students with forms of BE1M14TVM The course focuses on typical applications of power ser basics of modulation and control strategies of BE1M15ELS The aim of the course is to make students acquainted witi indoor and outdoor areas, respecting ne BE1M15PPE1 The aim of the course is to get an overvie BE1M15PPE1 The course introduces basic technical principles of electr and failure phenomena, main principles of d BE1M15PRE1 The course introduces particular topics concerning transm these states. The course BE1M15TVN The course contains the fundamental theories of high	ps between parameters, or using an experimental way. Factorial experiment of dynamic behavior of processes and systems are described. Basic met omputer modeling and simulation of electrical, thermal and mechanical sys lectures. Power components in electrical engineering , MOSFETs and IGBTs) and integraed structures (modules). Structures, fur- onents of powet electronic. Connection of devices in parallel and in series. Electric Machinery and Apparatus g devices in LV networks. Basic topologies AC switches and stress of their ices. The course also deals with the general theory of electrical machines. to the network, a short circuit. Mathematical model of synchronous and as of harmonic magnetic field. Single-phase induction motor. Work synchronous capacity. Modeling of Dynamical Systems nics of rigid bodies, fluid mechanics, aerodynamics, gas dynamics and ther tems. Seminars are focused on assembling of numeric models in Matlab / Machinery and Structures of Power Plants energy transformation in power plants, describing the function of power fac Theory and Application of Power Converters miconductor converters on their sizing, switching and protection of power as f power semiconductor converters and modern trends in their application i Electrical Light th most frequent applications of optical radiation and with theoretical and pacessary visual performance with emphasis on energy efficiency solutions Engineering Applications w of solving basic mathematical problems occurring in engineering praction nents and Operation of Electrical Power Systems ricity transmission and distribution. There are explained parameters of pow timensioning and protecting, power quality and its control and electrical mat- mission and distribution systems, mainly load flow solutions, specific aspect- tree also deals with synchronous generators characteristics in different oper- tree also deals with synchronous generators characteristics in different oper- tree also deals with synchronous generators characteristics i	ts for qualitative variables are presen- hods of component models compilat terms in power electrical engineering Z,ZK unction, characteristics and parameter Z,ZK components, systems with modern - Magnetic field. Fundamentals of con- synchronous machines. A rotating ma- us machine on a network. Torque, sta Z,ZK modynamics in the compilation of no Simulink. Z,ZK illities, their structure, properties and of Z,ZK semiconductor converters. It also sur n electric drives and other application z,ZK coractical principles of resolving lightir and aspects of health and safety. Z,ZK ver systems key elements, steady sta achines characteristics and utilization Z,ZK s of system steady states and possibilizational states. Z,ZK ring. The knowledge of high voltage	ted. Computer ion, assembly completes the 5 ers, Passive 5 semiconducto nmutation. The agnetic field. ability, overload 5 nlinear models 5 scharacteristics 5 mmarizes the ns. 5 ng systems for 5 ates, transient 5 ilities to contro 5 generators,

BE1M16EKE1	Economy of Power Industry	Z,ZK	5				
Fundamentals of	Fundamentals of financing of power companies. Cost structure of power generation and distribution. Prices and tariff systems for power, heat and gas production and distribution						
Examples of eco	Examples of economic evaluation and investment appraisal of the typical project in power sector. Renewable energy sources, externalities. Energy policy and energy law in CR.						
	Liberalization and power market development.						
BE1M16EUE1	Z,ZK	5					
Organization and energy management of company, buildings or energy systems. Energy need and consumption, energy balance. Energy characterization of aggregate, secondary							
energy sources. Energy audit and feasibility study, optimization of energy management of energy systems. Prices and tariffs, economy and financial analysis.							
BE1MPROJ	PROJ Individual project Z						
Independent wor	Independent work in the form of a project. A student will choose a topic from a list of topics specified by branch department. The project will be defended within the framework of a						
	subject.						
BEEZM	Safety in Electrical Engineering for a master's degree	Z	0				
The course provides for students of all programs periodic training guidelines for health and occupational safety and gives knowledge of electrical hazard of given branch of study.							
	Students receive indispensable qualification according to the current Directive of the Dean.
