## Recomended pass through the study plan

## Name of the pass: Specialization Radio Systems - Passage through study

Faculty/Institute/Others: Faculty of Electrical Engineering Department: Pass through the study plan: Electronics and Communications - Radio Systems Branch of study guranteed by the department: Welcome page Guarantor of the study branch: Program of study: Electronics and Communications Type of study: Follow-up master full-time Note on the pass:

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of seme	ester: 1					
Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BE2M37ART	Architecture of Radio Receivers and Transmitters Josef Dobeš, Pavel Ková Karel Ulovec Pavel Ková (Gar.)	Z,ZK	6	2P+2L	Z	Ρ

## List of courses of this pass:

Code	Name of the course	Completion	Credits
BDIP25	Diploma Thesis	Z	25
Independent final of	comprehensive work for the Master's degree study programme. A student will choose a topic from a range of topics related to his or h	ner branch of study	, which will
be specified by	y branch department or branch departments. The diploma thesis will be defended in front of the board of examiners for the compreh	ensive final examir	nation.
BE2M17ANT	Antennas	Z,ZK	6
Student will get str	ong knowledge about theory of electromagnetic field radiation and basic principles of antenna design. Methods of analysis are dem	onstrated on variou	us types of
antennas and th	eir arrays. Seminars are both theoretical (analytical and numerical calculation using MATLAB and EM simulators CST) and practical	(measurement of	antenna
	parameters).		
BE2M17CADA	CAD in HF Technique	Z,ZK	6
	Introduction into principles and techniques used in modern microwave circuit design.		
BE2M17MIMA	Microwave Measurements	Z,ZK	6
Fast developmen	t of wireless radio data communications (both mobile and stationary) also results in requirements for measurement of numerous rela	ted electrical para	meters in
frequency band rang	ging from hundreds of MHz to tens of GHz. The "Microwave measurements" subject brings description of all important measurement i	nstruments and m	easurement
methods used in this	s field. Instructions devoted to measurement devices also cover detailed inner structures, principles of operation, common measureme	nt setups and optin	num setting.
Even relatively com	plex measurement instruments and setups are discussed, for example those used for measurement of noise and non-linear parame	ters. Exercises are	focused on
practical measurem	ents commonly performed in the wireless communication field. Besides modern measurement instruments, students also learn a numb	er of typical RF and	d microwave
	components, circuits, subsystems and digitally modulated signals.		
BE2M17MIOA	Microwave Circuits	Z,ZK	6
	Subject is focused on the design of planar passive and active microwave circuits.		
BE2M17SBS	Wave Propagation for Wireless Links	Z,ZK	6
The aim of the cours	se is to study the wireless transmission channel in real environments focusing on wave propagation for planning of terrestrial and satel	lite wireless links. T	The syllabus
includes both deepe	r theoretical foundations of radio wave propagation in the atmosphere as well as ITU-R design procedures for terrestrial and satellite, fix	ed and mobile com	munications
	in various frequency bands.		

BE2M31DSPA Digital Signal Processing	Z,ZK	6
The subject gives overview about basic methods of digital signal processing and their applications (examples from speech and biological signal proces	sing): disrete-time s	ignals and
systems, signal characteristics in time and frequency domain, Fourier transform, fast algorithms for DFT computation, introduction to digital filter design	n, digital filtering in	time and
frequency domain, decimation and interpolation and their usage in filter banks, basics of LPC analysis. Further details can be foun	d at <a< td=""><td></td></a<>	
href=http://noel.feld.cvut.cz/vyu/be2m31dspa>http://noel.feld.cvut.cz/vyu/be2m31dspa .		
BE2M32BTSA Wireless Technologies	Z,ZK	6
The lectures give overview of fundamental principles of wireless networks in various areas of their application. Students will understand architecture, pr	inciples and protoc	ols used in
different wireless technologies and learn how these technologies can be exploited in real world applications. The goal is to teach students how to solve p	roblems related to o	deployment
of wireless networks, their operation or development of wireless networks components.		
BE2M32MKSA Mobile Networks	Z,ZK	6
The lectures introduce principles and functionalities of mobile networks with special focus on currently deployed technologies and future mobile network	ks. Furthermore, a	chitecture
and fundamental principles of GSM, UMTS, LTE/LTE-A, and 5G will be explained. Then, selected key technologies for future mobile networks (	6G) will be explaine	ed.
BE2M34NSV VLSI System Design	Z,ZK	6
Introduction to basic building blocks, architecture and design methodologies of advanced VLSI systems. Structure and design of digital and analogue i	•	
Integrated system description and synthesis using cell libraries and IP cores. Synchronization, power consumption and parasitics reduction issues. Test	• •	° I
systems. In seminars and labs, the hardware description language VHDL will be explained and used for practical design, synthesis and testing	-	
BE2M37ART Architecture of Radio Receivers and Transmitters	Z,ZK	6
The subject deals with the architecture of the radio receivers and transmitters and software radio. The student s familiarize with the design and the mod		
the radio receivers and transmitters' functional blocks and with the phenomena related with frequency conversion, noise sources and noise analyses.		
receiver and transmitter design, including the level and frequency plans and their optimization. The course also deals with the digital signal processing	blocks of the mod	ern radio
receivers and their practical implementation.		
BE2M37DKM Digital Communications	Z,ZK	6
The course provides fundamentals of digital communications theory: modulation, classical coding, channel models, and basic principles of decoding. The		-
built along the theoretical lines which allow to reveal all inner connections and principles. This allows students to develop the knowledge and use it in a		°
construction of the communication systems. The course provides a necessary fundamental background for subsequent more advanced commun		
BE2M37DTRA Digital Audio and Video Broadcasting	Z,ZK	. 6
The subject makes students familiar with topics related to video and audio transmission. Described are methods of data stream creation, methods of so		<b>U</b>
correction principles and modulation formats. Attention is paid to transmission systems standards with regard to transmission channel properties. The sub	ject also deals with	multimedia
data services and with measurement in transmission systems.	7 71/	0
BE2M37MAM Microprocessors	Z,ZK	6
The aim is to make students acquainted with the properties of microprocessor systems, make students familiar with on-chip peripherals, connect extern and with implementation of the memory or I/O space address extension. Next, taught the students to make simple program in the assembly language, C		a a a a a a b u a
and with implementation of the memory of 1/O space address extension. Next, laught the students to make simple program in the assembly language, t	•	
	language and con	bination of
both. After completion of this subject student should be able to design and implement simpler microprocessor system including connection of necessary	language and con	bination of
