

# Studijní plán

## Název plánu: Electrical Engineering and Computer Science (EECS)

Sou část VUT (fakulta/ústav/další): Fakulta elektrotechnická

Katedra:

Obor studia, garantovaný katedrou: Předzazením do oboru

Garant oboru studia.:

Program studia: Electrical Engineering and Computer Science

Typ studia: Bakalářské prezenční

Přepsané kredity: 160

Kredity z volitelných předmětů: 20

Kredity v rámci plánu celkem: 180

Poznámka k plánu:

Název bloku: Povinné předměty programu

Minimální počet kreditů bloku: 122

Role bloku: P

Kód skupiny: 2018\_BEECSBAP

Název skupiny: Bachelor Thesis

Podmínka kredity skupiny: V této skupině musíte získat 20 kreditů

Podmínka předmětů skupiny: V této skupině musíte absolvovat alespoň 1 předmět

Kredity skupiny: 20

Poznámka ke skupině:

Kód	Název předmětu / Název skupiny předmětů (u skupiny předmětů seznam kód jejich členů) Využívají, autoři a garanti (gar.)	Zakonění	Kredity	Rozsah	Semestr	Role
BBAP20	<b>Bakalářská práce - Bachelor thesis</b> Roman Mejla Roman Mejla (Gar.)	Z	20	12S	L,Z	P

Charakteristiky předmětů této skupiny studijního plánu: Kód=2018\_BEECSBAP Název=Bachelor Thesis

BBAP20	Bakalářská práce - Bachelor thesis	Z	20
--------	------------------------------------	---	----

Samostatná závěrečná práce bakalářského studia komplexního charakteru. Téma práce si student vybere z nabídky témat souvisejících se studovaným programem, které vypisují katedry FEL v KOSu. Práce bude obhajována před komisí pro státní závěrečné zkoušky.

Kód skupiny: 2018\_BEECSP

Název skupiny: Compulsory subjects of the programme

Podmínka kredity skupiny: V této skupině musíte získat 102 kredity

Podmínka předmětů skupiny: V této skupině musíte absolvovat alespoň 18 předmětů

Kredity skupiny: 102

Poznámka ke skupině:

Kód	Název předmětu / Název skupiny předmětů (u skupiny předmětů seznam kód jejich členů) Využívají, autoři a garanti (gar.)	Zakonění	Kredity	Rozsah	Semestr	Role

### Charakteristiky předmětů této skupiny studijního plánu: Kód=2018\_BEECSP Název=Compulsory subjects of the programme

BEEZZ	Basic health and occupational safety regulations	Z	0			
Školení je součástí systému povinných předmětů fakulty a bezpečnost a ochranu zdraví při práci na VUT v Praze. Studenti všech programů bakalářského studia tímto absolvují povinné základní školení BOZP. Školení je povinné dle platné směrnice dle zákona.						
BE5B16EPD	Business Economics	KZ	4			
Targets and function of business, corporation life cycle. Cost classification, cost calculation, cost curves. Profit, production, price and cost relation. Taxes. Financial calculus and investment decision-making. Business plan. Management functions, corporation organizational schemes. Processes and firm management. Výsledek studentské ankety předmětů je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B16EPD">http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B16EPD</a>						
BE5B01MA1	Calculus 1	Z,ZK	7			
It is an introductory course to calculus of functions of one variable. It starts with limit and continuity of functions, derivative and its geometrical meaning and properties, graphing of functions. Then it covers indefinite integral, basic integration methods and integrating rational functions, definite integral and its applications. It concludes with introduction to Taylor series.						
BE5B01MA2	Calculus 2	Z,ZK	7			
The subject covers an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals. Fourier series are also introduced. Výsledek studentské ankety předmětů je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B01MA2">http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B01MA2</a>						
BE5B01DEN	Differential Equations&Numerical Methods	Z,ZK	7			
Cílem kursu je seznámit studenty s klasickou teorií obyčejných diferenciálních rovnic (separabilní a lineární ODR) a zároveň je uvést do problematiky numerické matematiky (chyby výpočtu a stabilita, numerické řešení rovnic algebraických a diferenciálních a jejich soustav). Kurs silně využívá synergie mezi pohledem teoretickým a praktickým. Výsledek studentské ankety předmětů je zde: <a href="https://fel.cvut.cz/anketa/aktualni/courses/BE5B01DEN/">https://fel.cvut.cz/anketa/aktualni/courses/BE5B01DEN/</a>						
BE5B01DMG	Discrete Mathematics and Graphs	Z,ZK	5			
The aim of the course is to introduce students to fundamentals of Discrete Mathematics with focus on electrical engineering. The content of the course covers fundamentals of propositional and predicate logic, infinite sets with focus on the notion of cardinality of sets, binary relations with focus on equivalences and partial orderings; integers, relation modulo; algebraic structures including Boolean algebras. Further, the course covers basics of the Theory of Graphs.						
BE5B34ELP	Electron Devices	Z,ZK	5			
This course introduces the basic theory, principles of operation and properties of electron devices. Physical principles of operation, device structures and characteristics are explained together with adequate models for small- and large-signal. Basic applications in analogue and digital electronics are examined. In seminars and labs, students are introduced to basic principles of device simulation, measurement of device characteristics and extraction of device parameters. Operation of electron devices in electronic devices is then analyzed using the PSpice simulator. Výsledek studentské ankety předmětů je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B34ELP">http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B34ELP</a>						
BE5B31ZEO	Fundamentals of Electrical Circuits	Z,ZK	5			
The subject describes fundamental methods of electrical circuit analysis. After a brief introductory part where the difference between an electrical device and its models is introduced, the basic ideal passive and active circuit elements are then defined. Next, basic circuit quantities are defined; lectures are then focused on important laws and methods of analysis of electrical circuits. Circuit theorems, an analysis of DC circuits, AC circuits, first-order and second-order circuits are described. Finally, a brief description of more sophisticated methods of analysis (Laplace transform, pulse excitation) is done. The seminars are focused on getting a theoretical experience in analysis of electrical circuits, supplemented with simulations and simple measurement. Výsledek studentské ankety předmětů je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B31ZEO">http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B31ZEO</a>						
BE5B01LAL	Linear Algebra	Z,ZK	8			
The course covers standard basics of matrix calculus (determinants, inverse matrix) and linear algebra (basis, dimension, inner product spaces, linear transformations) including eigenvalues and eigenvectors. Matrix similarity, orthogonal bases, and bilinear and quadratic forms are also covered.						
BE5B15MAA	Mathematical Applications	Z,ZK	4			
The aim of the course is to obtain knowledge about mathematic programs used in electrical engineering. Student will acquire basic knowledge about MATLAB, MATHEMATICA and mathematical model assessment.						
BE5B34MIK	Microcontrollers	Z,ZK	6			
The goal of this course is to make students acquainted with recent interesting applications, smart sensors circuits and peripherals handled by microcontrollers. In a lab students will program their own application and measure its properties. Because of usage of a programming language C it will be possible to focus on the practical part of the realization.						
BE5B02PH1	Physics 1	Z,ZK	8			
The basic course of physics at the Faculty of Electrical Engineering - Physics 1, is devoted to the introduction into two important areas of physics. The first one is a classical mechanics and the second one is the electric and magnetic field. Within the framework of the classical mechanics, the students study the particle kinematics; dynamics of the mass particle, system of mass particles and rigid bodies. The students should be able to solve basic problems dealing with the description of mechanical systems, which they can meet during their further studies. The classical mechanics is followed by the relativistic mechanics, electric and magnetic field - both stationary as well as non-stationary. The students can use the facts gained in this course in the study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the knowledge gained in this course is required for the study of the consecutive course Physics 2.						

BE5B02PH2	Physics 2	Z,ZK	7
Within the framework of this course the students will first of all learn foundations of thermodynamics. Following topic - the theory of waves - will give to the students basic insight into the properties of waves and will help to the students to understand that the presented description of the waves has a universal character in spite of the waves character. Particular types of waves, such as acoustic or optical waves are the subjects of the following section. Quantum mechanics and nuclear physics will complete the student's general education in physics. The knowledge gained in this course will help to the students in study of such modern areas as robotics, computer vision, measuring technique and will allow them to understand the principles of novel technologies and functioning of new electronic devices.			
BE5B01PRS	Probability and Statistics	Z,ZK	7
Cílem p edm tu je seznámit studenty se základy teorie pravd podobnosti a matematické statistiky, jejich výpo etními metodami a aplikacemi t chto matematických nástroj na praktické p íklady.			
BE5B33PRG	Programming Essentials	Z,ZK	6
The course focuses on understanding and mastering basic design principles of algorithms. It develops data abstraction coupled with the essential programming patterns. The emphasis is on creating readable and reusable programs.			
BE5B33PGE	Programming for Engineers	Z,ZK	6
BE5B99PRO	Project	Z	10
BEEZB	Safety in Electrical Engineering for a bachelor's degree	Z	0
Školení seznamuje studenty všech program s riziky a p í inami úraz elektrickým proudem, s bezpeč nostními p edpisy pro obsluhu a práci na elektrických za ízeních, s ochranami p ed úrazem elektrickým proudem, s první pomocí p í úrazu elektrickým proudem a dalšími bezpeč nostními technickými opat eními v elektrotechnice. Studenti získají pot ebnou elektrotechnickou kvalifikaci pro innost na VUT FEL.

Charakteristiky p edmet této skupiny studijního plánu: Kód=2018\_BEECSPV Název=Compulsory subjects of the branch

BE5B33ALG	Algorithms	Z,ZK	6
In the course, the algorithms development is constructed with minimum dependency to programming language; nevertheless the lectures and seminars are based on Python. Basic data types a data structures, basic algorithms, recursive functions, abstract data types, stack, queues, trees, searching, sorting, special application algorithms. Students are able to design and construct non-trivial algorithms and to evaluate their affectivity. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33ALG">http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33ALG</a>			

BE5B35ARI	Automatic Control	Z,ZK	7
Foundation course of automatic control. Introduction to basic concepts and properties of dynamic systems of physical, engineering, biological, economics, robotics and informatics nature. Basic principles of feedback and its use as a tool for altering the behavior of systems and managing uncertainty. Classical and modern methods for analysis and design of automatic control systems. Students specialized in systems and control will build on these ideas and knowledge in the advanced courses to follow. Students of other branches and programs will find out that control is a inspiring, ubiquitous and entertaining field worth of a future cooperation. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B35ARI">http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B35ARI</a>			
BE5B99CPL	C Programming Language	Z,ZK	6
The course provides complete knowledge of the C programming language regarding a program structure operation, memory access, and multi-thread applications. The course emphasis a good programming style to develop clean, easy-to-read, and re-usable code. Students are introduced into the process of the source code compilation and active debugging. Lectures introduce basic code structures and demonstration applications which link together partial constructs and practical coding aiming for cleanliness and structure of the source code, computational efficiency optimized using code profiling and debugging. Students are introduced into the fundamental principles of parallel multi-thread programming, synchronization mechanism and multi-thread application models. The end of the course presents introduction to principles of object oriented programming and C++.			
BE5B32PKS	Computer and Communication Networks	Z,ZK	6
The aim of the course is to familiarize students with current trends in the switched local networks and the key functions of routing protocols in IP networks. The course is aimed rather primarily practically then theoretically			
BE5B35APO	Computer Architectures	Z,ZK	6
Subject provides overview of basic building blocks of computer systems. Explanation starts from hardware side where it extends knowledge presented in the previous lectures of Structures of computer systems. Topics cover building blocks description, CPU structure, multiple processors interconnections, input/output subsystem and basic overview of network and buses topologies. Emphasis is placed on clarification of interconnection of hardware components with software support, mainly lower levels of operating systems, device drivers and virtualization techniques. General principles are more elaborated during presentation of examples of multiple standard CPU architectures. Exercises are more focused on the software view to the contrary. Students are lead from basic programming on CPU level to the interaction with raw hardware. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B36APO">http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B36APO</a>			
BE5B33KUI	Cybernetics and Artificial Intelligence	Z,ZK	6
The course introduces the students into the field of artificial intelligence and gives the necessary basis for designing machine control algorithms. It advances the knowledge of state space search algorithms by including uncertainty in state transition. Students are introduced into reinforcement learning for solving problems when the state transitions are unknown, which also connects the artificial intelligence and cybernetics fields. Bayesian decision task introduces supervised learning. Learning from data is demonstrated on a linear classifier. Students practice the algorithms in computer labs.			
BE5B14SP1	Electric Machinery and Apparatus 1	Z,ZK	5
Electric drive and its components. Electromechanical energy conversion. Rotational converters - DC machines, induction motors, synchronous generators and motors. Special electric machines, actuators. Static converters - transformers. There are presented operational principles, main constructional scheme and characteristics, applications. Switching theory. Interaction between turn-off switch and switched circuit. Basic theory and characteristic of electric arc. Transient recovery voltage. Switching overvoltage. Low voltage protection apparatuses.			
BE5B17EMT	Electromagnetic Field Theory	Z,ZK	6
This course presents fundamentals of electromagnetic field theory and its applications. Analysis methods proper for static, stationary as well as dynamic fields and waves in free space and on basic transmission lines are presented as well. This course provides students with physics - based view on studied effects, which is applied then on engineering problems. At the end of the course, all effects should not only be described, but quantified as well. Basic knowledge and insight into communication devices, systems and techniques is provided, applicable not only to systems currently taught in other courses, but to future systems as well.			
BE5B35LSP	Logic Systems and Processors	Z,ZK	6
The course is an introduction to basic hardware structures of computing resources, their design, and architecture. It provides an overview of the implementation of data operations at hardware and the creation of embedded processor systems with peripherals on advance programmable logic FPGAs.			
BE5B13MVE	Materials for Power Electrical Engineering	Z,ZK	5
At first a physical description of basic properties and basic types of materials for electrical engineering is carried out. Types of conductors, superconductors, insulators, magnetic materials and semiconductors, which are used in power electrical engineering, are presented. The stress is put on relationships between properties, technology and the use. The student will meet, in higher detail, with ceramics for electrical engineering, with properties of mica, glass and their applications, with environmental conductive joining, with materials for thin and thick films and with selected nanomaterials and their applications. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE1B13MVE">http://www.fel.cvut.cz/anketa/aktualni/courses/AE1B13MVE</a>			
BE5B33RPZ	Pattern Recognition and Machine Learning	Z,ZK	6
The basic formulations of the statistical decision problem are presented. The necessary knowledge about the (statistical) relationship between observations and classes of objects is acquired by learning on the raining set. The course covers both well-established and advanced classifier learning methods, as Perceptron, AdaBoost, Support Vector Machines, and Neural Nets. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33RPZ">http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33RPZ</a>			
BE5B15EN1	Power Engineering 1	Z,ZK	5
The course informs students about basic principles and topologies of electrical transmission and distribution systems. There are explained key system elements and their parameters, steady, transient and failure phenomena, main rules for dimensioning and protecting.			
BE5B15EN2	Power Engineering 2	Z,ZK	6
This course is an introduction to the field of thermodynamic processes in thermal power plants, energy balances and structure of various renewable and conventional energy production technologies. Students will became also familiar with individual components of self consumption of power plants. The power generation and distribution are linked to high voltage systems and insulation materials. The fundamental theory of often used insulation materials and their properties will be explained. Lightning and switching overvoltages and their impact to the insulation of electric power system will be discussed at the end of the course.			
BE5B38SME	Sensors and Measurement	Z,ZK	6
Basic circuits and instruments for measurement of electrical quantities, AD and DA converters, sensors focused to use in robotics and automation, intelligent sensors, methods of decreasing uncertainties. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B38SME">http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B38SME</a>

Poznámka ke skupině: ~Student can choose arbitrary subject of the bachelor's program (EEM - Electrical Engineering, Power Engineering and Management, KME - Communications, Multimedia and Electronics, KYR - Cybernetics and Robotics, OI - Open Informatics, OES - Open Electronics Systems) which is not part of his curriculum. Student can choose with consideration of recommendation of the branch guarantee.\

### Seznam předmětů tohoto přechodu:

Kód	Název předmětu	Zakonění	Kredity
BBAP20	Bakalářská práce - Bachelor thesis Samostatná závěrečná práce bakalářského studia komplexního charakteru. Téma práce si student vybere z nabídky témat souvisejících se studovaným programem, které vypisují katedry FEL v KOSu. Práce bude obhajována před komisí pro státní závěrečné zkoušky.	Z	20
BE5B01DEN	Differential Equations & Numerical Methods Cílem kursu je seznámit studenty s klasickou teorií obyčejných diferenciálních rovnic (separabilní a lineární ODR) a zároveň je uvést do problematiky numerické matematiky (chyby výpočtu a stabilita, numerické řešení rovnic algebraických a diferenciálních a jejich soustav). Kurs silně využívá synergie mezi pohledem teoretickým a praktickým. Výsledek studentské ankety předmětu je zde: <a href="https://fel.cvut.cz/cz/anketa/aktualni/courses/BE5B01DEN/">https://fel.cvut.cz/cz/anketa/aktualni/courses/BE5B01DEN/</a>	Z,ZK	7
BE5B01DMG	Discrete Mathematics and Graphs The aim of the course is to introduce students to fundamentals of Discrete Mathematics with focus on electrical engineering. The content of the course covers fundamentals of propositional and predicate logic, infinite sets with focus on the notion of cardinality of sets, binary relations with focus on equivalences and partial orderings; integers, relation modulo; algebraic structures including Boolean algebras. Further, the course covers basics of the Theory of Graphs.	Z,ZK	5
BE5B01LAL	Linear Algebra The course covers standard basics of matrix calculus (determinants, inverse matrix) and linear algebra (basis, dimension, inner product spaces, linear transformations) including eigenvalues and eigenvectors. Matrix similarity, orthogonal bases, and bilinear and quadratic forms are also covered.	Z,ZK	8
BE5B01MA1	Calculus 1 It is an introductory course to calculus of functions of one variable. It starts with limit and continuity of functions, derivative and its geometrical meaning and properties, graphing of functions. Then it covers indefinite integral, basic integration methods and integrating rational functions, definite integral and its applications. It concludes with introduction to Taylor series.	Z,ZK	7
BE5B01MA2	Calculus 2 The subject covers an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals. Fourier series are also introduced. Výsledek studentské ankety předmětu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B01MA2">http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B01MA2</a>	Z,ZK	7
BE5B01PRS	Probability and Statistics Cílem předmětu je seznámit studenty se základy teorie pravděpodobnosti a matematické statistiky, jejich výpočetními metodami a aplikacemi těchto matematických nástrojů na praktické příklady.	Z,ZK	7
BE5B02PH1	Physics 1 The basic course of physics at the Faculty of Electrical Engineering - Physics 1, is devoted to the introduction into two important areas of physics. The first one is a classical mechanics and the second one is the electric and magnetic field. Within the framework of the classical mechanics, the students study the particle kinematics; dynamics of the mass particle, system of mass particles and rigid bodies. The students should be able to solve basic problems dealing with the description of mechanical systems, which they can meet during their further studies. The classical mechanics is followed by the relativistic mechanics, electric and magnetic field - both stationary as well as non-stationary. The students can use the facts gained in this course in the study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the knowledge gained in this course is required for the study of the consecutive course Physics 2.	Z,ZK	8
BE5B02PH2	Physics 2 Within the framework of this course the students will first of all learn foundations of thermodynamics. Following topic - the theory of waves - will give to the students basic insight into the properties of waves and will help to the students to understand that the presented description of the waves has a universal character in spite of the waves character. Particular types of waves, such as acoustic or optical waves are the subjects of the following section. Quantum mechanics and nuclear physics will complete the student's general education in physics. The knowledge gained in this course will help to the students in study of such modern areas as robotics, computer vision, measuring technique and will allow them to understand the principles of novel technologies and functioning of new electronic devices.	Z,ZK	7
BE5B13MVE	Materials for Power Electrical Engineering At first a physical description of basic properties and basic types of materials for electrical engineering is carried out. Types of conductors, superconductors, insulators, magnetic materials and semiconductors, which are used in power electrical engineering, are presented. The stress is put on relationships between properties, technology and the use. The student will meet, in higher detail, with ceramics for electrical engineering, with properties of mica, glass and their applications, with environmental conductive joining, with materials for thin and thick films and with selected nanomaterials and their applications. Výsledek studentské ankety předmětu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE1B13MVE">http://www.fel.cvut.cz/anketa/aktualni/courses/AE1B13MVE</a>	Z,ZK	5
BE5B14SP1	Electric Machinery and Apparatus 1 Electric drive and its components. Electromechanical energy conversion. Rotational converters - DC machines, induction motors, synchronous generators and motors. Special electric machines, actuators. Static converters - transformers. There are presented operational principles, main constructional scheme and characteristics, applications. Switching theory. Interaction between turn-off switch and switched circuit. Basic theory and characteristic of electric arc. Transient recovery voltage. Switching overvoltage. Low voltage protection apparatuses.	Z,ZK	5
BE5B15EN1	Power Engineering 1 The course informs students about basic principles and topologies of electrical transmission and distribution systems. There are explained key system elements and their parameters, steady, transient and failure phenomena, main rules for dimensioning and protecting.	Z,ZK	5
BE5B15EN2	Power Engineering 2 This course is an introduction to the field of thermodynamic processes in thermal power plants, energy balances and structure of various renewable and conventional energy production technologies. Students will become also familiar with individual components of self consumption of power plants. The power generation and distribution are linked to high voltage systems and insulation materials. The fundamental theory of often used insulation materials and their properties will be explained. Lightning and switching overvoltages and their impact to the insulation of electric power system will be discussed at the end of the course.	Z,ZK	6

BE5B15MAA	Mathematical Applications	Z,ZK	4
The aim of the course is to obtain knowledge about mathematic programs used in electrical engineering. Student will acquire basic knowledge about MATLAB, MATHEMATICA and mathematical model assessment.			
BE5B16EPD	Business Economics	KZ	4
Targets and function of business, corporation life cycle. Cost classification, cost calculation, cost curves. Profit, production, price and cost relation. Taxes. Financial calculus and investment decision-making. Business plan. Management functions, corporation organizational schemes. Processes and firm management. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B16EPD">http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B16EPD</a>			
BE5B17EMT	Electromagnetic Field Theory	Z,ZK	6
This course presents fundamentals of electromagnetic field theory and its applications. Analysis methods proper for static, stationary as well as dynamic fields and waves in free space and on basic transmission lines are presented as well. This course provides students with physics - based view on studied effects, which is applied then on engineering problems. At the end of the course, all effects should not only be described, but quantified as well. Basic knowledge and insight into communication devices, systems and techniques is provided, applicable not only to systems currently taught in other courses, but to future systems as well.			
BE5B31TES	Signal Theory	Z,ZK	5
BE5B31ZEO	Fundamentals of Electrical Circuits	Z,ZK	5
The subject describes fundamental methods of electrical circuit analysis. After a brief introductory part where the difference between an electrical device and its models is introduced, the basic ideal passive and active circuit elements are then defined. Next, basic circuit quantities are defined; lectures are then focused on important laws and methods of analysis of electrical circuits. Circuit theorems, an analysis of DC circuits, AC circuits, first-order and second-order circuits are described. Finally, a brief description of more sophisticated methods of analysis (Laplace transform, pulse excitation) is done. The seminars are focused on getting a theoretical experience in analysis of electrical circuits, supplemented with simulations and simple measurement. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B31ZEO">http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B31ZEO</a>			
BE5B32PKS	Computer and Communication Networks	Z,ZK	6
The aim of the course is to familiarize students with current trends in the switched local networks and the key functions of routing protocols in IP networks. The course is aimed rather primarily practically than theoretically			
BE5B33ALG	Algorithms	Z,ZK	6
In the course, the algorithms development is constructed with minimum dependency to programming language; nevertheless the lectures and seminars are based on Python. Basic data types a data structures, basic algorithms, recursive functions, abstract data types, stack, queues, trees, searching, sorting, special application algorithms. Students are able to design and construct non-trivial algorithms and to evaluate their affectivity. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33ALG">http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33ALG</a>			
BE5B33KUI	Cybernetics and Artificial Intelligence	Z,ZK	6
The course introduces the students into the field of artificial intelligence and gives the necessary basis for designing machine control algorithms. It advances the knowledge of state space search algorithms by including uncertainty in state transition. Students are introduced into reinforcement learning for solving problems when the state transitions are unknown, which also connects the artificial intelligence and cybernetics fields. Bayesian decision task introduces supervised learning. Learning from data is demonstrated on a linear classifier. Students practice the algoritms in computer labs.			
BE5B33PGE	Programming for Engineers	Z,ZK	6
BE5B33PRG	Programming Essentials	Z,ZK	6
The course focuses on understanding and mastering basic design principles of algorithms. It develops data abstraction coupled with the essential programming patterns. The emphasis is on creating readable and reusable programs.			
BE5B33RPZ	Pattern Recognition and Machine Learning	Z,ZK	6
The basic formulations of the statistical decision problem are presented. The necessary knowledge about the (statistical) relationship between observations and classes of objects is acquired by learning on the raining set. The course covers both well-established and advanced classifier learning methods, as Perceptron, AdaBoost, Support Vector Machines, and Neural Nets. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33RPZ">http://www.fel.cvut.cz/anketa/aktualni/courses/AE4B33RPZ</a>			
BE5B34ELP	Electron Devices	Z,ZK	5
This course introduces the basic theory, principles of operation and properties of electron devices. Physical principles of operation, device structures and characteristics are explained together with adequate models for small- and large-signal. Basic applications in analogue and digital electronics are examined. In seminars and labs, students are introduced to basic principles of device simulation, measurement of device characteristics and extraction of device parameters. Operation of electron devices in electronic devices is then analyzed using the PSpice simulator. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B34ELP">http://www.fel.cvut.cz/anketa/aktualni/courses/AE2B34ELP</a>			
BE5B34MIK	Microcontrollers	Z,ZK	6
The goal of this course is to make students acquainted with recent interesting applications, smart sensors circuits and peripherals handled by microcontrollers. In a lab students will program their own application and measure its properties. Because of usage of a programming language C it will be possible to focus on the practical part of the realization.			
BE5B35APO	Computer Architectures	Z,ZK	6
Subject provides overview of basic building blocks of computer systems. Explanation starts from hardware side where it extends knowledge presented in the previous lectures of Structures of computer systems. Topics cover building blocks description, CPU structure, multiple processors interconnections, input/output subsystem and basic overview of network and buses topologies. Emphasis is placed on clarification of interconnection of hardware components with software support, mainly lower levels of operating systems, device drivers and virtualization techniques. General principles are more elaborated during presentation of examples of multiple standard CPU architectures. Exercises are more focused on the software view to the contrary. Students are lead from basic programming on CPU level to the interaction with raw hardware. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B36APO">http://www.fel.cvut.cz/anketa/aktualni/courses/AE0B36APO</a>			
BE5B35ARI	Automatic Control	Z,ZK	7
Foundation course of automatic control. Introduction to basic concepts and properties of dynamic systems of physical, engineering, biological, economics, robotics and informatics nature. Basic principles of feedback and its use as a tool for altering the behavior of systems and managing uncertainty. Classical and modern methods for analysis and design of automatic control systems. Students specialized in systems and control will build on these ideas and knowledge in the advanced courses to follow. Students of other branches and programs will find out that control is a inspiring, ubiquitous and entertaining field worth of a future cooperation. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B35ARI">http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B35ARI</a>			
BE5B35LSP	Logic Systems and Processors	Z,ZK	6
The course is an introduction to basic hardware structures of computing resources, their design, and architecture. It provides an overview of the implementation of data operations at hardware and the creation of embedded processor systems with peripherals on advance programmable logic FPGAs.			
BE5B38SME	Sensors and Measurement	Z,ZK	6
Basic circuits and instruments for measurement of electrical quantities, AD and DA converters, sensors focused to use in robotics and automation, intelligent sensors, methods of decreasing uncertainties. Výsledek studentské ankety p edm tu je zde: <a href="http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B38SME">http://www.fel.cvut.cz/anketa/aktualni/courses/AE3B38SME</a>			
BE5B99CPL	C Programming Language	Z,ZK	6
The course provides complete knowledge of the C programming language regarding a program structure operation, memory access, and multi-thread applications. The course emphasis a ?good? programming style to develop clean, easy-to-read, and re-usable code. Students are introduced into the process of the source code compilation and active debugging. Lectures introduce basic code structures and demonstration applications which link together partial constructs and practical coding aiming for cleanliness and structure of the source code, computational efficiency optimized using code profiling and debugging. Students are introduced into the fundamental principles of parallel multi-thread programming, synchronization mechanism and multi-thread application models. The end of the course presents introduction to principles of object oriented programming and C++.			

BE5B99PRO	Project	Z	10
BEEZB	Safety in Electrical Engineering for a bachelor's degree	Z	0
Školení seznamuje studenty všech programů s riziky a příčinami úrazu elektrickým proudem, s bezpečnostními předpisy pro obsluhu a práci na elektrických zařízeních, s ochranami před úrazem elektrickým proudem, s první pomocí při úrazu elektrickým proudem a dalšími bezpečnostními technickými opatřeními v elektrotechnice. Studenti získají potřebnou elektrotechnickou kvalifikaci pro inženýrskou práci na VUT FEL.			
BEEZZ	Basic health and occupational safety regulations	Z	0
Školení je součástí systému povinné péče fakulty o bezpečnost a ochranu zdraví při práci na VUT v Praze. Studenti všech programů bakalářského studia tímto absolvují povinné základní školení BOZP. Školení je povinné dle platné směrnice děkana.
