Studijní plán

Název plánu: Bachelor Specialization, Software Engineering, 2021

Sou ást VUT (fakulta/ústav/další): Fakulta informa ních technologií Katedra: Obor studia, garantovaný katedrou: Úvodní stránka Garant oboru studia.: **Program studia: Informatics** Typ studia: Bakalá ské prezen ní P edepsané kredity: 155 Kredity z volitelných p edm t : 25 Kredity v rámci plánu celkem: 180 Poznámka k plánu: This version of the study plan is intended for students who have been enrolled for study from the academic year 2021/2022 into the full-time form of study of the bachelor's program. . Guarantor: Ing. Michal Valenta, Ph.D., email: michal.valenta@fit.cvut.cz Název bloku: Povinné p edm ty programu Minimální po et kredit bloku: 110 Role bloku: PP Kód skupiny: BIE-PP.21 Název skupiny: Compulsory Courses of Bachelor Study Program Informatics, version 2021 Podmínka kredity skupiny: V této skupin musíte získat 110 kredit

Podmínka p edm ty skupiny: V této skupin musíte absolvovat 21 p edm t

Kredity skupiny: 110

Poznámka ke skupině: If you plan to profile yourself in the specialization Information Security, Computer Networks and Internet, Computer Systems and Virtualization, or Software Engineering, enroll in the course BIE-PSI.21 in your 2nd semester of study. If you plan to profile yourself in the specialization Computer Engineering, or Computer Science, enroll in the course BI-PSI.21 in your 4th semester of study. - On the basis of the certificate of knowledge of English at the B2 level, which is stated in the conditions for admission to study, you can have the subject BIE-EEC recognized for 4 credits.

Charakteristiky p edmet této skupiny studijního plánu: Kód=BIE-PP.21 Název=Compulsory Courses of Bachelor Study Program Informatics, version 2021

BIE-AG1.21	Algorithms and Graphs 1	Z,ZK	5
The course covers the b	asics from the efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every comp	uting curriculum. I	t is interlinked
with the concurrent BIE-	AAG and BIE-ZDM courses in which the students gain the basic skills and knowledge needed for time and space complexity	of algorithms and	learn to handle
practically the asymptot	c mathematics.		
BIE-AAG.21	Automata and Grammars	Z,ZK	5
Students are introduced	to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of fir	nite automata, reg	ular expressions
and regular grammars, t	ranslation finite automata, construction and use of pushdown automata, hierarchy of formal languages, relationships betwee	n formal language	s and automata.
Knowledge acquired thr	ough the module is applicable in designs of algorithms for searching in text, data compression, simple parsing and translatio	n, and design of o	ligital circuits.
BIE-BPR.21	Bachelor Project	Z	1
At the beginning of the	semester the student will contact the supervisor of the bachelor thesis he has booked. They will discuss the partial tasks that	student will perfo	rm during the
semester. If he fulfill the	se tasks, the supervisor will award him / her at the end of the semester with the BI-BPR course.		
BIE-BAP.21	Bachelor Thesis	Z	14
BIE-PSI.21	Computer Networks	Z,ZK	5
The course introduces s	tudents to the principles of computer networking. It covers basic technologies, protocols, and services commonly used in loc	al networks and i	n the Internet as
well. The lectures will be	amended by proseminars that introduce students into network programming and demonstrate the abilities of advanced netw	work technologies	. Students
practically verify configu	rations and management of network devices in the lab within the environment of the operating systems Linux and Cisco IOS	S.	
BIE-SAP.21	Computer Structures and Architectures	Z,ZK	5
Students understand ba	sic digital computer units and their structures, functions, and hardware implementation: ALU, control unit, memory system, in	nputs, outputs, da	ta storage and
transfer. In the labs, stud	lents gain practical experience with the design and implementation of the logic of a simple processor using modern digital d	esign tools.	
BIE-KAB.21	Cryptography and Security	Z,ZK	5
Students will understand	d the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able t	o use cryptograpł	nic keys and
certificates in systems b	ased on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in a	pplications. Within	n labs, students
will gain practical skills i	n using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedure	s of cryptanalysis	. Students are
expected to be compete	nt programmers in C/C++ (on a small scale). Basic Python knowledge is an advantage.		
BIE-DBS.21	Database Systems	Z,ZK	5
Students get acquainted	with the architecture of the database engine and typical user roles. They learn to design the structure of a smaller data stor	e (including integ	rity constraints)
using a conceptual mod	el and then implement them in a relational database engine. They get acquainted with the SQL language and also with its the	oretical basis - rel	ational database
model. They will get acq	uainted with the principles of relational database schema normalization. They understand the basic concepts of transaction	processing and co	ontrol of parallel
user access to a single	data source. At the end of the course, students will be introduced to alternative nonrelational database models.		
BIE-DML.21	Discrete Mathematics and Logic	Z,ZK	5
Students will get acquai	nted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts	from set theory v	vill be explained.
Special attention is paid	to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The co	ourse also lays do	wn the basics of
combinatorics and number	per theory, with emphasis on modular arithmetics.		
BIE-TDP.21	Documentation and Presentation	KZ	3
The course is focused o	n the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typical	ly final university	heses. Students
learn to create text of a	technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically pr	esent it in front of	classmates and
the teacher. The course	is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 1	4 days of teachin	g. Within the
exercises of the course,	an active approach to the creation of individual parts of the bachelor's thesis is assumed.		
BIE-EEC	English language external certificate	Z	4
The BIE-ECC course ca	n be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in E	nglish comparable	to or exceeding
the B2 level of the Com	non European Framework of Reference for Languages.		
BIE-LA1.21	Linear Algebra 1	Z,ZK	5
We will introduce studer	ts to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the fie	eld of real and cor	nplex numbers
	s. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian eli		,
the connection with lines	ar manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eige	nvalues and eiger	vectors of a
matrix. We will also dem	onstrate some applications of these concepts in computer science.		

BIE-MA1.21 Mathematical Analysis 1	Z,ZK	5
We begin the course by introducing students to the set of real numbers and its properties, and we note its differences with the set of machine number	I ' I	real sequences
and real functions of a real variable. We gradually introduce the notions of limits of sequences and functions, continuous functions, and derivatives of fu	-	
is then applied to root-finding problems (iterative method of bisection and Newtons method), construction of cubic interpolation (spline), and formulation	and solution of sin	ple optimization
problems (i.e., the issue of finding extrema of functions). The course is closed with the Landaus asymptotic notation and methods of mathematical desc	ription of complex	ity of algorithms.
BIE-MA2.21 Mathematical Analysis 2	Z,ZK	6
The course completes the theme of analysis of real functions of a real variable initiated in BIE-MA1 by introducing the Riemann integral. Students wi	Il learn how to inte	egrate by parts
and use the substitution method. The next part of the course is devoted to number series, and Taylor polynomials and series. We apply Taylors theorem	n to the computation	on of elementary
functions with a prescribed accuracy. Then we study the linear recurrence equations with constant coefficients, the complexity of recursive algorithms	, and its analysis u	using the Master
theorem. Finally, we introduce the student to the theory of multivariate functions. After establishing basic concepts of partial derivative, gradient, and	Hessian matrix, v	ve study the
analytical method of localization of local extrema of multivariate functions as well as the numerical descent method. We conclude the course with the in	tegration of multiv	ariate functions.
BIE-OSY.21 Operating Systems	Z,ZK	5
In this course that is a follow-up of the Unix-like operating systems course students deepen their knowledge in areas of OS kernels, process and thread	implementations,	race conditions,
critical regions, thread scheduling, shared resource allocation and deadlocks, management of virtual memory and data storages, file systems, OS m	nonitoring. They ar	e able to design
and implement simple multithreaded applications. General principles are illustrated on operating systems Solaris, Linux, or MS Windows.		
BIE-PST.21 Probability and Statistics	Z,ZK	5
Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random variable	s. They will be ab	e to apply basic
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical induction	they will be able to	o perform
estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing statisti	cal hypotheses ar	nd determining
the statistical dependence of two or more random variables.		
BIE-PA1.21 Programming and Algorithmics 1	Z,ZK	7
Students learn to construct algorithms for solving basic problems and write them in the C language. They master data types (simple, pointers, struct	ured), expression	s, statements,
and functions presented in C language. They understand the principle of recursion and basics of algorithm complexity analysis. They know fundame	ntal algorithms for	searching,
sorting, and manipulating linked lists and trees.		
BIE-PA2.21 Programming and Algorithmics 2	Z,ZK	7
Students know the instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (stack,	queue, enlargeab	le array, list, set,
table). They learn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented programming (e.g., template pro	gramming,
copying/moving of objects, operator overloading, inheritance, polymorphism).		
BIE-GIT.21 SW Development Technologies	Z	3
This course is aimed at one of the rudimental team software development technology - version control. To be more specific, we will introduce studen	ts to Git, the inform	mation manager
from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use.		
BIE-TZP.21 Technological Fundamentals of Computers	Z,ZK	5
Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how compute	er structures look	ike at the lowest
level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to re	educe the consum	ption; what the
limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a d	computer power s	upply looks like
(in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica.		
BIE-UOS.21 Unix-like Operating Systems	KZ	5
Unix-like operating systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative	functions of mult	user operating
systems for computers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic prop	erties of this OS fa	amily, such as
processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level	el of advanced us	ers who are not
only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting interface	, called shell.

Charakteristiky p edmet této skupiny studijního plánu: Kód=BIE-SI-PS.21 Název=Compulsory Courses of the Specialization Software Engineering, version 2021 **BIE-KOM.21 Conceptual Modelling** Z,ZK 5 The course is focused on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key terms in a domain, the ability to categorize and specify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological structural modeling in the OntoUML notation. Next, they learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data representation in the Internet. They also learn the foundations of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The DEMO method and the BPMN notation will be taught. The course is designed with the respect to continuation in software implementations. **BIF-IDO 21** Introduction to DevOps Z.ZK 5 The course deals with the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of systems and services. The course covers the tools to support software development, testing and compilation. It also focuses on tools for automating infrastructure management and building and deploying software to the Cloud. It is an introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquainted with modern technologies used in practice. BIE-TJV.21 Java Technology Z,ZK 5 The aim of the course is to provide knowledge and skills needed for the development of smaller and larger information systems. Students will get acquainted with general theoretical concepts and will be able to apply these concepts using libraries and tools from the ecosystem of the Java programming language. After completing the course students will be able to participate in the development of software systems on the Java platform. Students are assumed to be acquainted with the following topics (they are used and not taught in this course): Java language syntax, SQL, git version control system, Docker, continuous integration. BIE-OOP.21 **Object-Oriented Programming** Z,ZK 5 Object-oriented programming has been used in the last 50 years to solve computational problems by using graphs of objects that collaborate together by message passing. In this course students get acquainted with the main principles of object-oriented programming and design, used in modern programming languages. The emphasis is on practical techniques for developing software, which includes testing, error handing, refactoring, and application of design pattern. **BIE-PPA.21 Programming Paradigms** Z.ZK The course deals with basic paradigms of high-level programming languages, including their basic execution models, benefits, and limitations of particular approaches. Functional programming paradigm and its basic principles are explained in details. Logic programming is introduced as another way of declarative programming. The principles are demonstrated on lambda calculus and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern mainstream programming languages such as C++ and Java **BIE-SWI.21** Software Engineering Z,ZK Students get acquainted with methods of analysis and design of larger software projects that are typically designed and implemented in teams. They consolidate and practically verify their knowledge during the analysis and design of larger software systems that will be developed in the concurrent course BIE-SP1. Students get hands-on experience with CASE tools using the visual language UML for modeling and solving software problems. Students learn the basics of object-oriented analysis, architecture design and testing. Within the course, students also gain a theoretical basis in the field of project management, estimation of costs of software projects, and methods of their development. BIE-SP1.21 Team Software Project 1 ΚZ 5 Students gain hands-on experience with the analysis, design, and prototyping of a large-scale software system. Theoretical support is provided in the BIE-SWI course that runs concurrently and that teaches students necessary techniques and principles. Teams consisting of 4-6 students will work on a specific project. The teacher, in the role of the team and project leader, regularly consults with the team (at the seminars) both the formal and material aspects of the software design. The resulting software artefact will be further developed and finished in the BIE-SP2 course.

BIE-SP2.21 Team Software Project 2

Students gain hands-on experience with the iterative development process while working on a large-scale software project. The first iteration is the result of the BIE-SP1 course project. However, in this follow-up, the functionality, testing, and documentation of the software system being developed will be emphasized. Students will work in teams of 4-6 people. The teacher, in the role of the team and project leader, regularly consults with the team (at the seminars) the formal as well as material aspects of their solution.

Charakteristiky p edmet této skupiny studijního plánu: Kód=BIE-SI-VO.21 Název=Elective vocational Courses of the Bachelor Specialization Computer Science, ver. 2021

BIE-SPS.21	Administration of Computer Networks and Services	Z,ZK	5					
The aim of the course is to deepen the theoretical knowledge of network technologies and protocols in the environment of network servers administrated under the operating systems								
Linux and Windows. The course syllabus requires the knowledge at the level of courses BIE-PSI, BIE-VPS, and BIE-OSY. Practical skills will be gained by practical hands-on experience								
with real network infrast	ructure.							
BIE-AG2 Algorithms and Graphs 2 Z,ZK 5								
BIE-TAB.21	Applications of Security in Technology	Z,ZK	5					
The goal of the course	s to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Stu	, idents get a broad	der overview of					
cybersecurity application	ns and extend their knowledge from the cryptology, the secure code, and system, network, and hardware security.							
BIE-ASB.21	Applied Network Security	Z,ZK	5					
The aim of the course is	to introduce selected topics from computer networks in terms of cybersecurity. These topics extend the basic knowledge ga	ined in course BI	-PSI with actual					
security applications like	e the public key infrastructure, encrypted network protocols, link and network layer security or wireless networks. After finishin	ng the course stu	dent will get					
knowledge of security a	pplications in computer networks.							
BIE-APS.1	Architectures of Computer Systems	Z,ZK	5					
Students will learn the o	onstruction principles of internal architecture of computers with universal processors at the level of machine instructions. Spo	ecial emphasis is	given on the					
pipelined instruction processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the principles of instruction processing								
not only in scalar processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of the sequential model of programs.								
The course further elab	The course further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory coherence and consistency in such systems.							

BIE-ZUM.21	Artificial Intelligence Fundamentals	Z,ZK	5
	to the fundamental problems in the Artificial Intelligence, and the basic methods for their solving. It focuses mainly on the classic		
space search, multi-age be presented as well.	ent systems, game theory, planning, and machine learning. Modern soft-computing methods, including the evolutionary algori	thms and the neu	ral networks, will
BIE-ZRS.21	Basics of System Control	Z,ZK	5
	roduction to the field of automatic control. It focuses particularly on the control of engineering and physical systems. It covers	1 1	-
-	cal single-input-single-output systems. Students will learn the methods of creating descriptions of system models, basic linear	-	
-	of simple feedback PID, PSD, and fuzzy controllers. Attention is also given to sensors and actuators in control loops, issues of	stability of control	systems, single
	ent of the controller parameters, and certain aspects of the industrial implementations of continuous and digital controllers.		
BIE-ZSB.21	Basics of System Security	Z,ZK	5
-	s to provide introduction to basic concepts in security of computer systems. Further, the course introduces the basics of fore sis or incident response. After finishing the course student will get both theoretical and practical knowledge in the area of mo-	-	-
-	for independent work in the area of operating system security incident analysis.		,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
BIE-TPS.21	Computer Networks Technologies	Z,ZK	5
	tudents with basic and advanced technologies, components, and interfaces of contemporary computer networks at the physical structure of the st		
	provide theoretical foundations of these technologies and explain relevant physical principles. In the labs, the respective tech		
always with focus on high	ones students will get hands-on experience. Thematically, the course covers both local and long-range optical networks, Eth ah-speed networks.	iemet, modem wi	eless hetworks,
BIE-JPO	Computer Units	Z,ZK	5
	d with the internal structure and organization of computer units and their interfacing with the environment. They also learn the	I ' I	-
types (main memory, LI	FO, FIFO and CAM), design methodology of control units and basic principles of bus communication. Students get skills nee	ded for computer	engineers.
BIE-VES	Embedded Systems	Z,ZK	5
-	embedded systems and develop software for them. They get basic knowledge of the most common microcontrollers and emb	edded processors	, their integrated
BIE-EHA.21	ramming methods, and applications. They get practical skills with development kits and tools. Ethical Hacking	Z,ZK	5
	s to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vu	I ' I	-
-	networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus		
vulnerabilities testing ar	nd the following process of penetration test documentation.		
BIE-HWB	Hardware Security	Z,ZK	5
	ardware resources used to ensure security of computer systems including embedded ones. The students become familiar w		
	the security features of modern processors, and storage media protection through encryption. They will gain knowledge abo attacks and tampering with hardware during manufacture. Students will have an overview of contact and contactless smart card		
-	ulti-factor authentication (biometrics). Students will understand the problems of effective implementation of ciphers.	a technology includ	ang applications
BIE-IOT.21	Internet of Things	Z,ZK	5
	an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an		s and actuators,
	technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT arch		
areas. Within the compu software - Arduino, Ras	tter labs, students will gain practical experience with developing simple IoT systems using common development environment and the procession of the statement of	nts (hardware - AF	RM, ESP, STM;
BIE-UKB.21	Introduction to Cybersecurity	Z,ZK	5
	s to provide students with the introduction of basic concepts in modern approach to cybersecurity. Students will get a basic		-
	s, security mechanisms in networks, operating systems and applications, as well as of basic cyberspace regulations.		
BIE-LA2.21	Linear Algebra 2	Z,ZK	5
	heir knowledge gained in the BIE-LA1 introductory course, where only vectors in the form of n-tuples of numbers were consid		
	tract form. The notions of a scalar product and a linear map will enable to demonstrate the profound link between linear alge n topic will be numerical linear algebra, in particular problems with solving systems of linear equations on computers. The iss		-
	ainly on the matrix factorization problem. Selected applications of linear algebra in various fields will be presented.	sues of numerical	illieal algebra
BIE-LOG.21	Mathematical Logic	Z,ZK	5
	the basics of propositional and predicate logic. It starts from the semantic point of view. Based on the notion of truth, satisfial		
	formulas are defined. Methods for determining the satisfiability of formulas, some of which are used for automated proving, a	-	
	blean functions in propositional logic. In predicate logic, the course further deals with formal theories, such as arithmetics, an		e syntactic
BIE-MPP.21	cal logic is demonstrated on the axiomatic system of propositional logic and its properties. Gödel's incompleteness theorems Methods of interfacing peripheral devices	Z,ZK	5
	n methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Univ	I ' I	-
	nd peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of l		,
drivers, simple applicati	on development, and APIs of selected devices.		
BIE-SIP.21	Network Programming	Z	5
	amental topics of programming network applications. It consists of 4 parts. The introductory part is focused on low-level prog		
	to designing communication protocols and their verification. The third part introduces the principles and applications of middl n models of distributed computing - P2P and blockchain. All topics will be first explained theoretically and then practices in c	•	
programming language			g a chocch
BIE-PNO	Practical Digital Design	KZ	5
-	w of the contemporary digital design flow and learn practical skills to use synchronous design techniques. They understand	1 1	HDL language,
	hnologies FPGA and ASIC.	· · · ·	
BIE-PJP	Programming Languages and Compilers	Z,ZK	5
	nethods of implementation of common high-level programming languages. They get experience with the design and impleme ng language: data types, subroutines, and data abstractions. Students are able to formally specify a translation of a text that		
	er based on such a specification. The notion of compiler in this context is not limited to compilers of programming languages	-	-
	ing text in a language defined by a LL(1) grammar.		
BIE-SRC.21	Real-time systems	Z,ZK	5
	ic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issu		-
the BIE-VES course and	entally verified in department specialized labs. The course is mainly focused on embedded RT systems, therefore the desigr	I KITS IN THE IAD ARE	me same as in

BIE-BEK	Secure Code	Z,ZK	5					
Studenti se nau í posuz	Studenti se nau í posuzovat a zohled ovat bezpe nostní rizika p i návrhu svého kódu a ešení v b žné inženýrské praxi. Od teorie modelování bezpe nostní rizik p istoupí k praxi,							
ve které si vyzkouší b h	ve které si vyzkouší b h program pod nižšími oprávn ními a jak tato oprávn ní stanovovat, protože ne každý program musí nutn b žet s administrátorským oprávn ním. Budou také

V záv ru se budou v no	ovat útok m typu DoS (Denial of Service) a obran proti nim.							
BIE-VPS.21	Selected Topics in Computer Networking	Z,ZK	5					
The course builds upon	the Computer Networks course (BI-PSI), obligatory for the program. Students will learn in detail principles, protocols, and techn	, hologies used in n	nodern computer					
networks from local are	a networks up to Internet, with focus on switching, routing, security, and virtualization. The emphasis will be on gaining practi	cal experience wi	ith real network					
devices in the lab and le	earning important methods of local area and wide area networks from the viewpoint of functionality, performance, and securit	iy.						
BIE-ADU.1	Unix Administration	Z,ZK	5					
Students became familia	ar with the internal structure of Unix-like systems, with the administration of their basic subsystems and with the principles of the	eir protection agai	nst unauthorized					
use. In the seminars the	ay will verify the information from the lectures on real life examples from practice. They will understand the differences betwee	en user and admir	nistrator roles.					
They gain theoretical ar	nd practical knowledge of tools for tracking, analyzing, debugging and securing systems, implementing and managing file syst	ems, disk subsyst	tems, processes,					
memory, network servic	es, shared file systems, name services, remote access, and system boot.							
BIE-VDC.21	Virtualization and Data Centers	Z,ZK	5					
The aim of the course is	to familiarize students with technology basis of cloud computer systems. It shows principles and techniques used in design a	and implementati	on of data center					
infrastructure, such as v	rarious kinds of virtualization and high availability of servers, storages, and software layers. The course guides through data of	center technologie	es from private					
to public and hybrid clos	uds. Student learn current trends in the architecture of IT infrastructure and its configuration for classic and cloud applications	s. Students will ur	nderstand the					
design, validation, and operation of complex infrastructures for modern applications with respect to scalability and protection against overloads, outages, and data losses.								
BIE-AWD.21	Web and Database Server Administration	Z,ZK	5					
Students will get acquai	nted with the administration of database and web servers and services. They will be able to install, configure, operate, test, a	ind backup compl	ex database and					
web service systems. T	he principles will be demonstrated on the PostgreSQL relational database engine and Apache will be used as an example of	a web server.

BIE-EPP.21	Economic Business Processes	Z,ZK	5			
The aim of the course is	The aim of the course is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and financial aspects of busines					
in the market environme	ent of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of t	he company's life	cycle, from the			
establishment of the co	mpany, through the management of property and capital structure, financing of the company, determining the cost function of	f the company and	d labor costs, to			
evaluating the financial	health of the company and its eventual rehabilitation or termination.					
BIE-PAI.21	Law and Informatics	ZK	5			
The aim of the course is	to introduce students into the basic legal instruments that they will encounter in their practice. Students will gain knowledge	of doing business	s in the Czech			
Republic and will be ale	rted to the pitfalls that await them in business from the point of view of law. They will understand the process of concluding or	ontracts in real an	d Internet			
environment, will know	their responsibilities in working with the Internet, will be familiar with the institutes of intellectual property law, and will be able	to use commerci	al license types			
and open-source licenses. Emphasis will also be put on the legal protection of data on the Internet, the registration of Internet domains and protection against their misuse. Students						
will also be alerted to se	uch behaviour in the field of IT that can be classified as criminal under the Czech law. The course will also include analyses of	f real cases from	practice.

BIE-CCN Compiler Construction	Z,ZK	5
This is an introductory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles		
understand the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching theme		
BIE-SCE1 Computer Engineering Seminar I	Z	4
The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance	1	ttacks. Students
are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of t		
articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar tead	hers. The topics a	are new for each
semester.		
BIE-SCE2 Computer Engineering Seminar II	Z	4
The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resistance	e to failures and a	ttacks. Students
are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Part of t	he subject is work	with scientific
articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the seminar tead	hers. The topics a	are new for each
semester.	r	
BIE-CZ0 Czech Language for Foreigners	KZ	2
Course Czech for foreigners offers the basic topics of conversation: Introductions, Orientation, Shopping, Work / Study, Travel, Time, Family.		
BIE-CZ1.21 Czech Language for Foreigners II	KZ	2
The course is intended for Students of English programmes who have completed BIE-CZ0 course or have basic knowledge of the Czech language.		r expands the
basic vocabulary and clarifies the structure of the Czech language structure with regard to the practical needs of Students residing in the Czech Rep		
UKCJP eština pro pokro ilé	Z,ZK	2
Kurz pokro ilé eštiny pro ukrajinské studenty, kte í mají status uprchlíka. Zkouška potvrdí znalost eštiny na úrovní B2 s platností pro VUT.		
BIE-DIF Differential equations	Z,ZK	5
This course provides a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essentia	al solution method	s like separation
of variables. Key theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered to		
polynomial analysis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world application	-	
partial differential equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODE	s and PDEs, incl	uding implicit
and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		4
BIE-EPR Economic project	Z	1
This course is an extension of the course Introduction to European Economic History (BIE-EHD).	7 71/	5
BIE-FTR.1 Financial Markets	Z,ZK	5
Financial sector has been deeply transformed in the recent years, which led to a development of structured financial products, a new point of view or alabelization of market activities. The panel to use and properly apply mathematical and technical techni		
globalization of market activities. The need to use and properly apply mathematical and technical tools is emphasized. To manage their financial activities from technical schools who have sufficient knowledge ICT and mathematics, and who have at the same time an understanding of the functioning of	-	-
Markets course thus englobes both a description of financial markets and related economic theories, and an overview of mathematical and statistica

BIE-CSI Introduction to Computer Science	Z	2
This is an introductory class on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in othe	1	
science, high-school students, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The		
and relate basic principles of computer science for students to understand, early on, what computer science is, why things such as high-level progra	- mming languages	and tools are
done the way they are, and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer	not just basic con	puter science
questions but also questions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interested and the second secon	rested in compute	er science more
than expected, or even less than before.		
BIE-EHD Introduction to European Economic History	Z,ZK	3
The course introduces a selection of themes from European economic history. It gives the student basic knowledge about forming of the global economic	omy through the d	escription of the
key historical periods. As European countries have been dominant actors in this process it focuses predominantly on their roles in economic history.	From the large ec	onomic area of
the Roman Empire to the fragmentation of the Middle Ages, from the destruction of WWII to the current affairs, the development of modern financial	institutions is deci	phered. The
course does not cover the detailed economic history of particular European countries but rather the impact of trade and the role of particular events,	institutions and o	rganizations in
history. Class meetings will consist of a mixture of lectures and discussions.		

FITE-EHD	Introduction to European Economic History	Z,ZK	3

	ainted with the architecture of the database engine and typical user roles. They learn to design the structure of a smaller data store (model and then implement them in a relational database engine. They get acquainted with the SQL language and also with its theored		-
	et acquainted with the principles of relational database schema normalization. They understand the basic concepts of transaction pro		
	user access to a single data source. At the end of the course, students will be introduced to alternative nonrelational database n	-	
BIE-DIF	Differential equations	Z,ZK	5
	es a foundational overview of differential equations, starting with basic motivation and examples of ODEs and progressing to essential s		-
-	theorems on existence and uniqueness establish when solutions can be guaranteed. Linear and system-based ODEs are covered wi		
	vsis, followed by examples of non-linear models such as predator-prey and epidemiological models to showcase real-world applicatio equations (PDEs) extends these concepts to multi-variable contexts. The course will also cover numerical methods for solving ODEs		
	and explicit Euler methods, Runge-Kutta methods, and finite element methods for both ODEs and PDEs.		ng implicit
BIE-DML.21	Discrete Mathematics and Logic	Z,ZK	5
	cquainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts fro	· · · ·	explained.
Special attention is	paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The course	se also lays down th	ne basics of
	combinatorics and number theory, with emphasis on modular arithmetics.		
BIE-EEC	English language external certificate	Z	4
	se can be recognized for any active semester after the submission of a certificate certificate that demonstrates their proficiency in Engli the B2 level of the Common European Framework of Reference for Languages.	sh comparable to o	rexceeding
BIE-EHA.21	Ethical Hacking	Z,ZK	5
	ourse is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vuln		
exploitation in con	nputer networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus is	on hands-on exper	ience with
	vulnerabilities testing and the following process of penetration test documentation.		
BIE-EHD	Introduction to European Economic History	Z,ZK	3
	ces a selection of themes from European economic history. It gives the student basic knowledge about forming of the global economy ods. As European countries have been dominant actors in this process it focuses predominantly on their roles in economic history. Fro	-	-
	re to the fragmentation of the Middle Ages, from the destruction of WWII to the current affairs, the development of modern financial in	-	
	over the detailed economic history of particular European countries but rather the impact of trade and the role of particular events, in	-	
	history. Class meetings will consist of a mixture of lectures and discussions.	_	
BIE-EPP.21	Economic Business Processes	Z,ZK	5
	Irse is to present typical processes related to the usual life cycle of a company. The course focuses mainly on the basic economic and		
	ronment of the Czech Republic and the basics of management. In the course, students are acquainted with the typical phases of the ne company, through the management of property and capital structure, financing of the company, determining the cost function of th		
	evaluating the financial health of the company and its eventual rehabilitation or termination.	e company and lab	01 00313, 10
BIE-EPR	Economic project	Z	1
	This course is an extension of the course Introduction to European Economic History (BIE-EHD).	1 1	
BIE-FTR.1	Financial Markets	Z,ZK	5
	has been deeply transformed in the recent years, which led to a development of structured financial products, a new point of view or		
-	rket activities. The need to use and properly apply mathematical and technical tools is emphasized. To manage their financial activitie	-	-
	nools who have sufficient knowledge ICT and mathematics, and who have at the same time an understanding of the functioning of fin se thus englobes both a description of financial markets and related economic theories, and an overview of mathematical and statistic		
BIE-GIT.21	SW Development Technologies	Z	3
	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to	ı — ı	-
	from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		-
BIE-HAS	Human Factors in Cryptography and Security	Z,ZK	5
-	tudent m, které zajímá nejen matematická a technická stránka v ci, ale i p emýšlení nad tím, jestli výsledný produkt bude použitelný pro		
sirry po uzivatele	aplikací). Studenti budou moci využít nabyté v domosti z tohoto kurzu k návrhu, plánování a analýze svých vlastních projekt v konte zam ené na lov ka.	exiu kyperneticke b	e∠pe nosti
BIE-HWB	Hardware Security	Z,ZK	5
	s with hardware resources used to ensure security of computer systems including embedded ones. The students become familiar with	I ' I	
	ules, the security features of modern processors, and storage media protection through encryption. They will gain knowledge about v		-
including side-char	anel attacks and tampering with hardware during manufacture. Students will have an overview of contact and contactless smart card teo		applications
	and related topics for multi-factor authentication (biometrics). Students will understand the problems of effective implementation of	cinhers	

	Introduction to DevOps	Z,ZK	5
	vith the topic of DevOps and prepares future developers and administrators for a modern culture of development and operation of system		
	support software development, testing and compilation. It also focuses on tools for automating infrastructure management and build		
the Cloud. It is an	introduction to technologies that will then be discussed in more detail in related follow-up courses. The student will also get acquaint	ed with modern teo	chnologies
	used in practice.		
BIE-IMA	Introduction to Mathematics	Z	4
Students refresh a	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a	able to apply them i	in particular
	examples.		
BIE-IMA2	Introduction to Mathematics 2	Z	2
	nd extend knowledge of elementary functions and their properties. Students understand basic mathematical principles and they are a	able to apply them i	
	examples.		1
BIE-IOT.21	Internet of Things	Z,ZK	5
	on an overview of technologies and development tools used in the field of the Internet of Things (IoT). Lectures are devoted to an over		
	cation technologies designed primarily for this area, and appropriate programming methods. They include an overview of IoT archited		
	computer labs, students will gain practical experience with developing simple IoT systems using common development environments		
	software - Arduino, Raspberry Pi OS).	(Ilaluwale - ARIVI,	ESF, STIVI,
		7 71/	-
BIE-JPO	Computer Units	Z,ZK	5
	ainted with the internal structure and organization of computer units and their interfacing with the environment. They also learn the or	-	-
	nory, LIFO, FIFO and CAM), design methodology of control units and basic principles of bus communication. Students get skills need		-
BIE-KAB.21	Cryptography and Security	Z,ZK	5
Students will und	lerstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	use cryptographic	keys and
certificates in syste	ems based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in appl	lications. Within lab	s, students
will gain practical	skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedures of	of cryptanalysis. Stu	udents are
	expected to be competent programmers in C/C++ (on a small scale). Basic Python knowledge is an advantage.		
BIE-KOM.21	Conceptual Modelling	Z,ZK	5
The course is focu	sed on developing abstract thinking and precise formulation skills using conceptual models. Students learn skills of discerning key te	rms in a domain, th	ne ability to
categorize and spe	cify correct relations in complex systems of social reality, mostly enterprises and institutions. Students learn basics of ontological struc	tural modeling in th	e OntoUML
notation. Next, they	r learn how to express business rules and constraints using the OCL language and foundations of OWL/RDF semantic data represent	tation in the Interne	t. They also
learn the foundation	ns of enterprise engineering, being a discipline for conceptual modelling of enterprises and institutes and their processes. The DEMO n	nethod and the BPI	MN notation
	will be taught. The course is designed with the respect to continuation in software implementations.		
BIE-LA1.21	Linear Algebra 1	Z,ZK	5
	students to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field	, · ,	-
	fields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimination of the Gaussian elimination elimination of the Gaussian elimination elimination eliminat		
	ith linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenvectors		-
	matrix. We will also demonstrate some applications of these concepts in computer science.	allee alle eigenre

BIE-PA1.21 Programming and Algorithmics 1	Z,ZK	7
Students learn to construct algorithms for solving basic problems and write them in the C language. They master data types (simple, pointers,	structured), expressions, s	tatements,
and functions presented in C language. They understand the principle of recursion and basics of algorithm complexity analysis. They know fu	ndamental algorithms for s	earching,
sorting, and manipulating linked lists and trees.		
BIE-PA2.21 Programming and Algorithmics 2	Z,ZK	7
Students know the instruments of object-oriented programming and are able to use them for specifying and implementing abstract data types (st		-
table). They learn these skills using the C++ programming language and are introduced to all C++ features needed in object-oriented program	nming (e.g., template progi	ramming,
copying/moving of objects, operator overloading, inheritance, polymorphism).	71/	-
BIE-PAI.21 Law and Informatics The aim of the course is to introduce students into the basic legal instruments that they will encounter in their practice. Students will gain know	Index of doing business in	5 the Czech
Republic and will be alerted to the pitfalls that await them in business from the point of view of law. They will understand the process of conc		
environment, will know their responsibilities in working with the Internet, will be familiar with the institutes of intellectual property law, and will be	-	
and open-source licenses. Emphasis will also be put on the legal protection of data on the Internet, the registration of Internet domains and pro-		
will also be alerted to such behaviour in the field of IT that can be classified as criminal under the Czech law. The course will also include ar	-	
BIE-PJP Programming Languages and Compilers	Z,ZK	5
Students master basic methods of implementation of common high-level programming languages. They get experience with the design and impl	1 1	
for a simple programming language: data types, subroutines, and data abstractions. Students are able to formally specify a translation of a text	that has a certain syntax in	nto a target
form and write a compiler based on such a specification. The notion of compiler in this context is not limited to compilers of programming language	ages, but extends to all othe	er programs
for parsing and processing text in a language defined by a LL(1) grammar.		
BIE-PJV Programming in Java	Z,ZK	4
The course Programming in Java will introduce students to the object oriented programming in Java programming language. Beside of basics of		mental APIs
will also be presented, especially data structures, files, GUI, networking, databases and concurrent APIs.		
BIE-PKM Preparatory Mathematics	Z	4
The purpose of Preparatory Mathematics is to help students revise the most important topics of high-school math		
BIE-PNO Practical Digital Design	KZ	5
Students get an overview of the contemporary digital design flow and learn practical skills to use synchronous design techniques. They underst	and the basics of the VHD	L language,
and implementation technologies FPGA and ASIC.		
BIE-PPA.21 Programming Paradigms	Z,ZK	5
The course deals with basic paradigms of high-level programming languages, including their basic execution models, benefits, and limitations		
programming paradigm and its basic principles are explained in details. Logic programming is introduced as another way of declarative program		
on lambda calculus and on Lisp (Racket) and Prolog programming languages. Moreover, usage of these principles is demonstrated on modern	i mainstream programming	languages
such as C++ and Java.		_
BIE-PRR.21 Project management	Z,ZK	5
The aim of the course is to introduce students into the basic concepts and principles of project management, i.e. methods of planning, teamw		
project, communication, argumentation and meeting management. Students will practice project management techniques (e.g. SWOT analysis		-
Gantt charts, resource schedule, resource balancing, network graphs) and creation of project documentation. The course is designed especial deepening their knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management position of the course is designed especial deepening their knowledge outside IT, consider starting their own company, or have ambitions to work in middle or senior management position.	-	
also suitable for all those who will develop software or hardware in the form of team projects.	nis in large companies. The	
BIE-PS2 Programming in shell 2	Z,ZK	4
Students get a general overview of scripting languages, introduction into syntax, semantics, programming style, data structures, pros and cons.	,	
into Bourne Again shell and some other particular scripting languages and will get practical experience with shell script programming. Note to Era		
the lectures to provide even very basic Bourne shell usage. Depending on actual knowledge of the students, orientation in user filesystem tools		· ·
data filtering tools (cut, tr, sort, uniq) can be provided. The advantage of this module is that we do not stop at this point - we will show you a		
techniques used in practice.		
BIE-PSI.21 Computer Networks	Z,ZK	5
The course introduces students to the principles of computer networking. It covers basic technologies, protocols, and services commonly used	in local networks and in the	Internet as
well. The lectures will be amended by proseminars that introduce students into network programming and demonstrate the abilities of advan	ced network technologies.	Students
practically verify configurations and management of network devices in the lab within the environment of the operating systems	Linux and Cisco IOS.	
BIE-PST.21 Probability and Statistics	Z,ZK	5
Students will learn the basics of probabilistic thinking, the ability to synthesize prior and posterior information and learn to work with random val	riables. They will be able to	apply basic
models of random variable distributions and solve applied probabilistic problems in informatics and computer science. Using the statistical in		-
estimations of unknown distributional parameters from random sample characteristics. They will also be introduced to the methods for testing s	statistical hypotheses and d	letermining
the statistical dependence of two or more random variables.		_
BIE-SAP.21 Computer Structures and Architectures	Z,ZK	5
Students understand basic digital computer units and their structures, functions, and hardware implementation: ALU, control unit, memory syst		0
transfer. In the labs, students gain practical experience with the design and implementation of the logic of a simple processor using in the logic of a sin the		
BIE-SCE1 Computer Engineering Seminar I	Z	4
The Seminar of Computer Engineering is a (s)elective course for students who want to deal with deeper topics of digital design, reliability and resi		
are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Pa articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the semina		
semester.	leachers. The topics are h	ew ior each

are approached individually within the subject. Each student or group of students solves some interesting topic with the selected supervisor. Pa		
articles and other professional literature and/or work in K N laboratories. The capacity of the subject is limited by the possibilities of the semina		
semester.		2. 5001
BIE-SEG Systems Engineering	Z	0
This is an introductory class on systems engineering for bachelor students in computer science. The goal of the class is to introduce basic princ	1	-
to understand processor and memory virtualization. Seeing and actually understanding virtualization is the overarching theme of the class. After		
understand the difference between processes and threads as well as emulation and virtualization, what virtual memory is and how it works,	-	
parallelism, and how processes and threads synchronize efficiently to overcome concurrency for communica	tion.	

BIE-SEP World Economy and Business	Z,ZK	4
The course introduces students of technical universities to international business. It does that predominantly by comparing individual countries and key region		
Students get to know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom, con	-	onomic
development, which are needed for the right investment decision. Seminars help to improve knowledge in the form of discussions based on individe BIE-SIP.21 Network Programming		5
BIE-SIP.21 Network Programming The course covers fundamental topics of programming network applications. It consists of 4 parts. The introductory part is focused on low-level programming	∠ a using BSD sor	
second part is devoted to designing communication protocols and their verification. The third part introduces the principles and applications of middleware te		
introduces basic modern models of distributed computing - P2P and blockchain. All topics will be first explained theoretically and then practices in comput	ter labs using a	chosen
programming language environment.		
BIE-SKJ.21 Scripting Languages	Z,ZK	4
Join us on a tour into the world of scripted programming. Together, we will unveil the power of Bourne Again shell and PERL as proven industry standards, as		
standard text processing utilities (AWK, sed), with some basic UNIX system tools, in many real-world situations like processing web feeds or logs. We will prof scripting languages and introduction into their pros and cons and students get practical experience with shell script programming. We will touch also ROF	•	
to get some insight into how your code documentation can be implemented. And if you know UNIX system-level scripting already, we can show you advanced		
and tricks that get overlooked frequently but increase code robustness or execution efficiency. The course is led by two veteran programmers in the scripting w		
lecturer in advanced shell programming, teaching developers from the IT industry in several CE countries. Jan is a skilled lecturer and developer whose cod	le contributes to	safe and
streamline operations of cloud service datacenters around the globe.		
BIE-SP1.21 Team Software Project 1	KZ	5
Students gain hands-on experience with the analysis, design, and prototyping of a large-scale software system. Theoretical support is provided in the BIE concurrently and that teaches students necessary techniques and principles. Teams consisting of 4-6 students will work on a specific project. The teacher, in		
project leader, regularly consults with the team (at the seminars) both the formal and material aspects of the software design. The resulting software artefact		
and finished in the BIE-SP2 course.		
BIE-SP2.21 Team Software Project 2	KZ	5
Students gain hands-on experience with the iterative development process while working on a large-scale software project. The first iteration is the result of the		
However, in this follow-up, the functionality, testing, and documentation of the software system being developed will be emphasized. Students will work in te	-	ple. The
teacher, in the role of the team and project leader, regularly consults with the team (at the seminars) the formal as well as material aspects of the		
BIE-SPS.21 Administration of Computer Networks and Services Administrated unc	Z,ZK	5 a systems
Linux and Windows. The course syllabus requires the knowledge of network technologies and protocols in the environment of network servers administrated and Linux and Windows. The course syllabus requires the knowledge at the level of courses BIE-PSI, BIE-VPS, and BIE-OSY. Practical skills will be gained by pract		
with real network infrastructure.		
BIE-SRC.21 Real-time systems	Z,ZK	5
Students obtain the basic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issues. The	oretical knowled	dge from
lectures will be experimentally verified in department specialized labs. The course is mainly focused on embedded RT systems, therefore the design kits in the previous sector of the p	he lab are the sa	ame as in
the BIE-VES course and FPGAs	Z

BIE-SWI.21 Software Engineering	Z,ZK	5
Students get acquainted with methods of analysis and design of larger software projects that are typically designed and implemented in teams. They consolid	date and practic	ally verify
their knowledge during the analysis and design of larger software systems that will be developed in the concurrent course BIE-SP1. Students get hands-on ex	•	
using the visual language UML for modeling and solving software problems. Students learn the basics of object-oriented analysis, architecture design and te	e e	e course,
students also gain a theoretical basis in the field of project management, estimation of costs of software projects, and methods of their deve BIE-TAB.21 Applications of Security in Technology	Z,ZK	5
The goal of the course is to introduce students to selected topics from cybersecurity technical applications that are utilized in different industries. Students g		
cybersecurity applications and extend their knowledge from the cryptology, the secure code, and system, network, and hardware secu	-	001
BIE-TDP.21 Documentation and Presentation	KZ	3
The course is focused on the basics of creating electronic documentation with emphasis on the creation of technical reports of a larger scope, typically final un		. Students
learn to create text of a technical report in the LaTeX system, process an electronic presentation using the LaTeX Beamer system, and practically present it i		
the teacher. The course is intended primarily for those students who have chosen the topic of their bachelor's thesis or will choose it within the first 14 days	s of teaching. Wi	ithin the
exercises of the course, an active approach to the creation of individual parts of the bachelor's thesis is assumed. BIE-TJV.21 Java Technology	Z,ZK	5
The aim of the course is to provide knowledge and skills needed for the development of smaller and larger information systems. Students will get acquainted		
concepts and will be able to apply these concepts using libraries and tools from the ecosystem of the Java programming language. After completing the cou	0	
to participate in the development of software systems on the Java platform. Students are assumed to be acquainted with the following topics (they are use	ed and not taugh	nt in this
course): Java language syntax, SQL, git version control system, Docker, continuous integration.		
BIE-TPS.21 Computer Networks Technologies	Z,ZK	5
The course introduces students with basic and advanced technologies, components, and interfaces of contemporary computer networks at the physical layer link layer. The lectures provide theoretical foundations of these technologies and explain relevant physical principles. In the labs, the respective technologies		-
with the most important ones students will get hands-on experience. Thematically, the course covers both local and long-range optical networks, Ethernet, m		
always with focus on high-speed networks.		,
BIE-TUR.21 User Interface Design	Z,ZK	5
Students gain a basic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where software and	nd other produc	ts do not
communicate with the user optimally, since the needs and characteristics of users are not taken into account during product development. Students gain an	overview of met	thods that
bring users into the development process to ensure optimal interface for them.		
BIE-TZP.21 Technological Fundamentals of Computers	Z,ZK	5
Students got acquainted with the fundamentals of digital and analog sizewite, as well as basis methods of analyzing them. Students learn how a structure to a tructure to a structure to a		the lowest
