Seznam p edm t tohoto pr chodu:

Kód	Název p edm tu	Zakon ení	Kredity
BIE-CCN	Compiler Construction	Z,ZK	5
This is an introdu	ctory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles	of compilers for st	udents to
understa	nd the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	theme of the class	S.
MI-SCE1	Seminá po íta ového inženýrství l	Z	4
	ého inženýrství je výb rový p edm t pro studenty, kte í se cht jí zabývat hloub ji tématy íslicového návrhu, spolehlivosti a odolnosti		
	nci p edm tu p istupuje individuáln a každý student i skupinka student eší n jaké zajímavé aktuální téma s vybraným školitelem.	-	
v deckými lánky a	jinou odbornou literaturou a/nebo práce v laborato ích K N. Kapacita p edm tu je omezena možnostmi u itel seminá e. Probíraná t	émata jsou pro ka	ždý semestr
	nová.	7 71/	
MIE-MZI	Mathematics for data science	Z,ZK	4
	tudents are introduced to the domains of mathematics necessary for understanding the standard methods and algorithms used in da near algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princ		•
include mainly. In	selected notions from probability theory and statistics.	ipie, gradient met	ious) and
MIE-SEP	World Economy and Business	Z,ZK	4
	ices students of technical university to the international business. It does that predominantly by comparing individual countries and k	•	-
	know about different religions and cultures, necessary for doing business in diverse societies as well as indexes of economic freedom		
	n are needed for the right investment decision. Seminars help to improve on the knowledge in the form of discussions based on indiv	· · ·	
	take bachelor level of this course BIE-SEP as a prerequisite.		
NI-AML	Pokro ilé techniky strojového u ení	Z,ZK	5
P edm t sezna	muje studenty s vybranými pokro ilými tématy strojového u ení a um lé inteligence a jejich aplikace na reálné problémy. Témata p e	dstavují techniky v	/ oblasti
doporu ovacích sy	stém, zpracování obrazu, ízení i propojení fyzikálních zákon s oblastí strojového u ení. Cílem cvi ení je podrobn seznámit stude	enty s probíranými	metodami.
NI-DID	Digital drawing	Z	2
	p iblížit student m základní principy digitální kresby a grafické tvorby. Studenti získají pov domí o základech kompozice, perspektivy		
	svých samostatných pracích. Studenti také získají zkušenosti s kresbou v pr b hu praktických cvi ení. Kurz je vhodný pro kohokoli		
	edílnou sou ástí výuky. P edm t bude organizovaný formou tematických cvi ení pokrývajících ást teorie a tv r ích cvi ení, která jsc	bu zamena na p	
NI-DSW	Design Sprint	Z	2
	acovat metodou design sprint, vyvinutou p vodn spole ností Google, díky které lze b hem 5 dn p ejít od nápadu p es testování až		
-	m kurzu se seznámí s metodou Design Sprint z pohledu ú astníka. Na praktickém problému si vyzkouší celý 5ti denní proces od výz íky za azení p ed za átek semestru mají studenti možnost vyzkoušet si metodu, která vyžaduje kontinuáln jší asovou alokaci než b	-	гргоютур.
NI-GLR	Games and reinforcement learning	Zina vyuka. Z,ZK	4
	cement learning is very hot recently, because of advances in deep learning, recurrent neural networks and general artificial intelligen	•	-
	give you both theoretical and practical background so you can participate in related research activities. Presented in English		
NI-GRI	Grid Computing	Z,ZK	5
	Grid computing and gain knowledge about the world-wide network and computing infrastructure.	_,	Ŭ
NIE-ADM	Data Mining Algorithms	Z,ZK	5
	on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students	,	ine learning
basics. The emphas	sis is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation syst	ems) and models	(e.g., kernel
	methods).		
NIE-ADP	Architecture and Design patterns	Z,ZK	5
	se is to provide students with practical knowledge of the basic principles of object-oriented design and its analysis, together with an un	•	
	promises associated with advanced software design. In the first part of the course, students will review and deepen their knowledge of		
	commonly used design patterns, which represent the best practices for solving typical software design problems. In the second part		
Introduced to the pr	inciples of design and analysis of software architecture including classical architectural designs, component systems and some adva large distributed systems. If you need to contact the teacher of NIE-ADP, please write an e-mail to Ing. Jiri Borsky borskjir@fit.cv		nitectures of
NIE-AIB	Algorithms of Information Security		5
	í s algoritmy bezpe ného generování klí a kryptografickým zpracováním chybových (nejen biometrických) dat. Dále se studenti sezr	Z,ZK	-
	otokol (identifika ních, autentiza ních a podpisových schémat). Získají znalosti o metodách detekce malware a použití strojového u		
	Taktéž se seznámí s metodami vytvá ení steganografických záznam , s metodami pro jejich vyhledávání a s útoky na n		aigentineenii
NIE-AM1	Middleware Architectures 1	Z,ZK	5
	y new trends, concepts, and technologies in the area of service-oriented architectures. The will gain an overview of information syste		
	ication servers. The will also study principles and technologies for middleware focused on application integrations, asynchronous comm		
	of applications. This course replaces the course MIE-MDW.		
NIE-AM2	Middleware Architectures 2	Z,ZK	5
	new trends and technologies on the Web including theoretical foundations. They will gain an overview of Web application architecture		echnologies
	for microservices, distrubuted cache and databases, smart contracts, realtime communication and web security.		

NIE-ARI	Computer arithmetic	Z,ZK	4
	Students will learn various data representations used in digital devices and will be able to design arithmetic operations implementations		
NIE-BKO	Error Control Codes	Z,ZK	5
	Is the basic knowledge of security codes used in current systems for error detection and correction. It provides the necessary mathen des and codes for the correction of multiple errors, clusters of errors and whole syllables (bytes). Students will also learn how to imple		-
	rections for different types of transmissions (parallel, serial) when storing data in memory and when transmitting over telecommunica		
NIE-BLO	Blockchain	Z,ZK	5
	stand the foundations of blockchain technology, smart contract programming, and gain an overview of most notable blockchain platforr	,	
code and deploy a	secure decentralized application, and assess whether integration of a blockchain is suitable for a given problem. The course places a	an increased emph	asis on the
relationship betwe	en blockchains and information security. It is concluded with a defense of a research or applied semester project, which prepares the	students for imple	menting or
	supervising implementation of blockchain-based solutions in both academia and business.	7 71/	4
NIE-BPS	Wireless Computer Networks n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad	Z,ZK	4 Iticast and
	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle		
	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab	• •	
NIE-BVS	Embedded Security	Z,ZK	5
	knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of crypto		
and software (in err	bedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources	for securing interr	al functions
	of computer systems.		_
NIE-CPX	Complexity Theory	Z,ZK	5
Students will lear	n about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the (in)tractability of difficult problems.	theory concerning	g practical
NIE-DDW	Web Data Mining	Z,ZK	5
	arn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain		
	crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overvie		-
	in the field of social web and recommendation systems.		
NIE-DIP	Diploma Project	Z	30
NIE-DSV	Distributed Systems and Computing	Z,ZK	5
	uced to methods for coordination of processes in distributed environment characterised by nondeterministic time responses of computing		
channels. They lear	rn basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that s data and services, and safety in case of failures.	upport high availa	bility of both
NIE-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
	to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with	•	-
	of this discipline, and to be able to solve simple algorithmic problems with a geometric component.		
NIE-EHW	Embedded Hardware	Z,ZK	5
-	basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the		
systems, that profit	from their specialized structure for effective computation and acceleration. Design of fast custom computing machines is discussed,	including standard	ized means
	of internal communication, parallelism extraction and utilization in special structures and system architectures.	7 71/	
NIE-EPC	Effective C++ programming v to use the modern features of contemporary versions of the C++ programming language for software development. The course focus	Z,ZK	5 of offoctivity
	iciency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor t		ig enectivity
NIE-ESW	Embedded Software	Z,ZK	5
	e course acquainted students with the specifics of software development for embedded systems. The course covers the areas from the ba		
in C language and	d code optimizations, through typical areas as the reliable software development, embedded operating systems, signal processing, up	o to sophisticated t	echniques
	combined with artificial intelligence.		
NIE-EVY	Efficient Text Pattern Matching	Z,ZK	5
Students get knowl	edge of efficient algorithms for text pattern matching. They learn to use so called succinct data structures that are efficient in both access	s time and memory	complexity.
NIE-FME	They will be able to use the knowledge in design of applications that utilize pattern matching. Formal Methods and Specifications	Z,ZK	5
	o describe semantics of software formally and to use sound reasoning for construction of correct software. They learn to use some so		
	basic properties of software.		
NIE-GAK	Graph theory and combinatorics	Z,ZK	5
	ss is to introduce the most important topics in graph theory, combinatorics, combinatorial structures, discrete models and algorithms.		be not only
-	e basic principles but also on applications in problem solving and algorithm design. The topics include: generating functions, selected top		
coloring, Ramsey t	heory, introduction to probabilistic method, properties of various special classes of graphs and combinatorial structures. The theory w of combinatorics on words, formal languages and bioinformatics.	ill be also applied	in the fields
NIE-GPU	GPU Architectures and Programming	Z,ZK	5
	nowledge of the internal architecture of modern massively parallel GPU processors. They will learn to program them mainly in the CUI		
-	videspread programming technology of GPU processors. As an integral part of the effective computational use of these hierarchical com		
	will also learn optimization programming techniques and methods of programming multiprocessor GPU systems.		
NIE-HMI	History of Mathematics and Informatics	Z,ZK	3
	es on selected topics from calculus, general algebra, number theory, numerical mathematics and logic - useful for today computer sci	-	
	ome relations between computer science and mathematical methods. Some examples of applications of mathematics to computer science and mathematical methods.		
NIE-HSC	Side-Channel Analysis in Hardware	Z,ZK	4 milior with
	dicated to so-called side-channel information leakage in hardware devices. It focuses on both theoretical analysis and practical attack ide channels and they get deeper insight in power attacks. Students learn to implement various profiled and non-profiled attacks and		
	he shares and any get deeper magnum power attacks ordering carries and analyzing the amount and characteristics of the side-channel	-	-
NIE-HWB	Hardware Security	Z,ZK	5
	es the knowledge needed for the analysis and design of computer systems security solutions. Students get an overview of safeguard	•	
-	eans. They will be able to safely use and integrate hardware components into systems and test them for resistance to attacks. Studen	-	edge about
the cry	vptographic accelerators, PUF, random number generators, smart cards, biometric devices, and devices for internal security functions	of the computer.	

NIE-KOD	Data Compression	Z,ZK	5
	oduced to the basic principles of data compression. They will learn the necessary theoretical background and get an overview of data		•
used in practice. T	he overview covers principles of integer coding and of statistical, dictionary, and context data compression methods. In addition, stude	ents learn the fund	amentals of
	lossy data compression methods used in image, audio, and video compression.		-
NIE-KOP	Combinatorial Optimization	Z,ZK	6
The students will	gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not onl	ly to select and imp	plement but
	also to apply and evaluate heuristics for practical problems.	7 71/	_
NIE-KRY	Advanced Cryptology	Z,ZK	5
	n the essentials of cryptanalysis and the mathematical principles of constructing symmetric and asymmetric ciphers. They will know ti generators. They will have an overview of cryptanalysis methods, elliptic curve cryptography and quantum cryptography, which they c		•
random namber	their own systems or to the creation of their own software solutions.		Sylution
NIE-MCC	Multicore CPU Computing	Z,ZK	5
	cquainted in detail with hardware support and programming technologies for the creation of parallel multithreaded computations on mu		-
-	ed memory, which are today the most common computing nodes of powerful computer systems. Students will gain knowledge of archi	-	
	preduce the decrease in computing power due to the widening performance gap between the computational requirements of multi-cor		
	throughput. On specific non-trivial multithreaded programs, students will also learn the basics of the art of creating these application	ations.	
NIE-MKY	Mathematics for Cryptology	Z,ZK	5
	ubší znalosti o algebraických postupech ešících nejd ležit jší matematické problémy, na kterých je založena bezpe nost šifer. Zejmé		
soustavy polynom	iálních rovníc nad kone ným t lesem, problém faktorizace velkých ísel a problém diskrétního logaritmu. Problém faktorizace bude s	peciáln ešen i na	a eliptických
	k ivkách. Studenti se rovnež seznámí s moderními šifrovacími systémy založenými na po ítání na m ížce.		
NIE-MPI	Mathematics for Informatics	Z,ZK	7
	s on selected topics from general algebra with emphasis on finite structures used in computer science. It includes topics from multi-variate		•
	e integration. The third large topic is computer arithmetics and number representation in a computer along with error manipulation. The	-	
numerical algoritr	hm and their stability analysis. The topics are completed with the demonstration of applications in computer science. The course focus	ses on clear preser	ntation and
	argumentation.	7	7
NIE-MPR	Master Project	Z	7
	g of the semester, a student reserves her/his final thesis topic and gets together with its supervisor. Together they decide on partial ta ter. If the requirements they agreed upon are met, the supervisor awards the student an assessment for the course MI-MPR at the en		
0	Γ) supervisor fills his/her assessment into the paper "Form to award assessment by an external Final theses (FT) supervisor" (for the		
	ts, then, ensure that the assessment is registered into the information system (IS) by asking their internal FT opponent to award the a		
	f the external MT supervisor. In the case the FT opponent is external as well, the assessment will be registered to the IS by the head		
for the topic of the	MT. 3. If the FT topic that the student has reserved is rather general, the immediate tasks the supervisor assigns to the student for the	ne upcoming seme	ster should
	aim at fine-tuning the FT topic so that the FTT will be complete and approvable at the end of the semester.		
NIE-MTI	Modern Internet Technologies	Z,ZK	5
Students learn	advanced networking technologies and protocols for both local area networks and wide area networks. They get acquainted with rout	ing techniques and	d transfer
	technologies of modern internet, including multimedia data transfer, with various types of network virtualization, and with last-mile	security.	
			1

21st century in computer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing cores	Z,ZK	6
2 is centrally in compater architectures is primarily initiaticed by the shift of the woore's law into parallelization of CF os at the level of compating cores	. Parallel computin	g systems
are becoming a ubiquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor	-	-
with architectures of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication oper	-	-
environments for parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and or learn the techniques of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course	-	-
practical programming in OpenMP and MPI for solving a particular nontrivial problem.	includes a semeste	er project or
NIE-PIS Advanced Information Systems	Z,ZK	5
Students learn the notion of business process logic and its formalization, with business process roles, business rules, and data processing, with the notion	· · · ·	-
enterprise services and service solution of business logic. They get acquainted with these notions also for the other types of ISs. They learn about agili		
artificial intelligence methods for implementation of these ideas in ISs. They understand modern object-oriented methodologies for modelling of business	ss processes, busir	ness rules,
processed data, and enterprise ISs. They will get the rules and technologies for successful implementation of IS.		
NIE-PML Personalized Machine Learning	Z,ZK	5
Personalized machine learning (PML) is a sub-field of machine learning that aims to create models and predictions based on the unique characteristic entities. While PML is commonly used in applications such as recommender systems, which recommend items to users based on their personal interest		
to a wide range of other fields, including education, medicine, and chemical engineering. In this course, we will explore the latest PML methods from theore		
perspectives. Specifically, we will focus on cutting-edge models that are of interest to both the research and commercial commu	-	
NIE-REV Reverse Engineering	Z,ZK	5
Students will learn fundamentals of reverse engineering of computer software (methods of executing and initializing programs, organization of executal		
libraries). Special attention will be paid to C ++. Students will also become familiar with the principles of debugging tools, disassemblers and obfuscation	n methods. Finally,	the course
will focus on code compression and decompression and executable file reconstruction.		
NIE-ROZ Pattern Recognition	Z,ZK	5
The aim of the module is to give a systematic account of the major topics in pattern recognition with emphasis on problems and applications of the streeognition. Students will learn the fundamental concepts and methods of pattern recognition, including probability models, parameter estimation, ar		-
NIE-SBF System Security and Forensics	Z.ZK	5
Students will be introduced to various aspects of system security (principles of endpoint security, principles of security policies, security models, authenti	, , ,	-
also learn about forensic analysis as a tool for investigating security incidents (techniques used by malicious software or attackers, forensic analysis tec		
of memory or file system artifacts for attack analysis and detection).

Students gain knowledge of very of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. NIE-TES Systems Theory Today, humankind has the ability to develop systems of incredible complexity (e.g., trains, microprocessors, airplanes, nuclear power plants). However complexity and of ensuring the correct behavior of a given system have become critical. A key technique for mastering this complexity is the usage of m aspects of the systems that are	affic. The course for incipals of handling Z,ZK lodeling) levels and Z,ZK hnologies, methods graphs and their s Z,ZK arious variants and a Z,ZK r, the costs of mana odels that describe	efense. The cuses on g detected 5 d with the 5 s and best ystematic 5 applications 5 aging this e only those
course explains basic pricipals of security monitoring, packet-based and flow-based analysis, in order to detect anomalies and suspicious network tradexplanation and practical examples of various mechanisms of securing network infrastructure and detection in real time. The course covers general prosecurity events (i.e. incident handling and incident response). NIE-SIM Digital Circuit Simulation and Verification Aim of the course is to acquaint the students with principles of digital circuit simulation at RTL (Register Transfer Level) and TLM (Transaction Level N properties of proper tools. The course covers today recent verification methods, too. NIE-SWE Semantic Web and Knowledge Graphs The students will learn the most recent concepts and technologies of the Semantic Web. The course will provide an overview of the Semantic Web tect practices for modelling, integration, publishing, querying and consumption of semantic data. The students will also gain skills in creation of knowledge quality assurance. NIE-SYP Parsing and Compilers The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of various of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. NIE-TES Systems Theory Today, humankind has the ability to develop systems of incredible complexity (e.g., trains, microprocessors, airplanes, nuclear power plants).
