

Study plan

Name of study plan: 15 141 NSTI MCH 2012 základ

Faculty/Institute/Others:

Department:

Branch of study guaranteed by the department: Welcome page

Garantor of the study branch:

Program of study: Mechanical Engineering

Type of study: Follow-up master

Required credits: 124

Elective courses credits: 0

Sum of credits in the plan: 124

Note on the plan:

Name of the block: Compulsory courses in the program

Minimal number of credits of the block: 121

The role of the block: P

Code of the group: 12NS*1P-MCH

Name of the group: 2012 NSTI 1.sem povinné MCH

Requirement credits in the group: In this group you have to gain 31 credits

Requirement courses in the group: In this group you have to complete 8 courses

Credits in the group: 31

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) <i>Tutors, authors and guarantors (gar.)</i>	Completion	Credits	Scope	Semester	Role

2361035	Theory and Construction of Instruments <i>Jan Hošek Jan Hošek Jan Hošek (Gar.)</i>	Z,ZK	3	2P+1C	*	P

Characteristics of the courses of this group of Study Plan: Code=12NS*1P-MCH Name=2012 NSTI 1.sem povinné MCH

2013054	Mathematics for Mechanics Summary: Tensor calculus. Introduction to functional analysis. Calculus of variations. • Orthogonal transformation of coordinate systems. • Afinne orthogonal tensors and tensor operations. • Tensor as linear operator and bilinear form. • Metrics and metric spaces. Convergence. Completeness. • Linear normed space. Banach space. • Linear space with scalar product (unitary space). Hilbert space. • Contractive operators and Banach fixed point theorem. • Function spaces in examples. • Operators and functionals. Linear, continuous and bounded operator/functional. • Derivative of a functional in the given direction. Gateaux differential and derivative. • Necessary and sufficient conditions for extremes of a functional. • Convex set and convex functional. Minimum of convex functional. • Extremes of functional of different types. Euler equation. Necessary and sufficient conditions for extrema. • Discrete methods for approximation of the minima of an functional. Ritz method.	Z	4
2311075	Mechanics of Mechanisms	ZK	4
2141093	Microelectronics Basic characteristics of logic circuits and programmable logical systems, input and output circuits - voltage and current matching, D/A and A/D converters, coding, lines and protocols of communications, electronic and optoelectronic parts for microelectronics, microprocessor system applications.	Z,ZK	3
2121043	Computational Fluid Mechanics This course extends the knowledge gained in the course of Fluid Mechanics about the knowledge of computational fluid dynamics. Emphasis is placed on understanding the basic principles of computational fluid dynamics based on using commercial codes. Selected problems of internal and external aerodynamics are solved.	ZK	4
2313111	Project I.	Z	5
2312017	Controlled mechanical systems I.	KZ	3

2361035	Theory and Construction of Instruments	Z,ZK	3
Subject gives knowledge about basics of instruments design in order student would be able to design different kinds of mechanical instruments.			

Code of the group: 12NS*2P-MCH

Name of the group: 2012 NSTI 2.sem povinné MCH

Requirement credits in the group: In this group you have to gain 30 credits

Requirement courses in the group: In this group you have to complete 9 courses

Credits in the group: 30

Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
2142028	Electrical Engineering for Mechatronics Jan Chyský Jan Chyský Jan Chyský (Gar.)	KZ	3	2P+0C+1L	*	P
2311074	Vibrations of Mechanical Systems Václav Bauma, Zbyněk Šíka, Michael Valášek, Jan Závěra Michael Valášek Václav Bauma (Gar.)	ZK	4	3P+0C	*	P
2313023	Mechatronics Václav Bauma, Zbyněk Šíka, Michael Valášek, Jan Závěra, Pavel Steinbauer Michael Valášek Michael Valášek (Gar.)	Z	2	2P+0C	*	P

2311076	Simulation of Mechatronic Systems Václav Bauma, Zbyněk Šíka, Michael Valášek, Jan Závěra, Jan Pelikán Michael Valášek Václav Bauma (Gar.)	ZK	3	2P+0C	*	P
2121055	Thermodynamics Tomáš Hyhlík	ZK	4	3P+0C	*	P

Characteristics of the courses of this group of Study Plan: Code=12NS*2P-MCH Name=2012 NSTI 2.sem povinné MCH

2142028	Electrical Engineering for Mechatronics	KZ	3
The purpose of the course is to give the student knowledge about different types of electrical drives for mechatronic systems and their practical use. Method for electromagnetic field approximative solution. The theory of linear and rotating drivers. Electromagnets supplied by AC and DC power. Static and dynamics parameters of electromagnets. Drives for rotating motion. DC motors. Mathematical description of their static and dynamic properties. Principle and function of stepper motor. AC induction motors. Mathematical description of their static and dynamic properties. Using MATLAB for drivers behaviour modelling.			
2311074	Vibrations of Mechanical Systems	ZK	4
2313023	Mechatronics	Z	2
2111035	Finite Element Method II.	ZK	3
2313112	Project II.	Z	5
2312027	Controlled Mechanical Systems II.	KZ	2
2311076	Simulation of Mechatronic Systems	ZK	3
2121055	Thermodynamics	ZK	4
The aim of the course is to expand the students' knowledge gained from the previous course Thermomechanics Alfa in the areas of the real gas thermodynamics, irreversible process thermodynamics, multiphase- and multicomponent system characteristics and thermodynamics cycles of the real heat engines and machines also.

Characteristics of the courses of this group of Study Plan: Code=12NS*4P-MCH Name=2012 NSTI 4.sem povinné MCH

2313998	Diploma project individual assignment	Z	10
2311091	System Identification	ZK	3
2351087	Industrial Robots and Manipulators Construction of industrial robots and manipulators, kinematic structures, various types of driving units, moving units, end effectors.	Z,ZK	3

2383062	Budget and Project Economic Assessment	Z	2
The goal of the course is to improve the knowledge gained within the basic bachelor's degree course Management and Economics of the Enterprise. The course focuses primarily on deepening of basic knowledge and skills in the creation and evaluation of the operational budget, proper preparation and evaluation of costing model for manufactured products and the economic evaluation of an investment project, as it corresponds to contemporary knowledge and the development of management methods and techniques. Students specify a simple fictional industrial or engineering company or its sub-section (preferably inspired by their practical experience, internships or training program in real company). The first student's task is to prepare a detailed plan and budget of a project (e.g. new product development, product or process innovation, etc.) focused on improvement of profitability, competitiveness or effectiveness of the company. The second task is cost calculation for chosen calculation unit. Last task within this course is the evaluation of economical effectiveness of the project described within the first task. The dynamic methods like Net Present Value (NPV), Internal Rate of Return (IRR) or Discounted Payback Period (DPP) are used for this evaluation. The quality of realization and presentation of the task's outputs together with the results of the test decides on granting / denial of credit.

2351087	Industrial Robots and Manipulators Construction of industrial robots and manipulators, kinematic structures, various types of driving units, moving units, end effectors.	Z,ZK	3
2361035	Theory and Construction of Instruments Subject gives knowledge about basics of instruments design in order student would be able to design different kinds of mechanical instruments.	Z,ZK	3
2383062	Budget and Project Economic Assessment	Z	2
The goal of the course is to improve the knowledge gained within the basic bachelor's degree course Management and Economics of the Enterprise. The course focuses primarily on deepening of basic knowledge and skills in the creation and evaluation of the operational budget, proper preparation and evaluation of costing model for manufactured products and the economic evaluation of an investment project, as it corresponds to contemporary knowledge and the development of management methods and techniques. Students specify a			

simple fictional industrial or engineering company or its sub-section (preferably inspired by their practical experience, internships or training program in real company). The first student's task is to prepare a detailed plan and budget of a project (e.g. new product development, product or process innovation, etc.) focused on improvement of profitability, competitiveness or effectiveness of the company. The second task is cost calculation for chosen calculation unit. Last task within this course is the evaluation of economical effectiveness of the project described within the first task. The dynamic methods like Net Present Value (NPV), Internal Rate of Return (IRR) or Discounted Payback Period (DPP) are used for this evaluation.

The quality of realization and presentation of the task's outputs together with the results of the test decides on granting / denial of credit.
