## Study plan

## Name of study plan: Electrical Engineering, Power Engineering and Management - Electrical Engineering and Management

Faculty/Institute/Others: Faculty of Electrical Engineering

Department:

Branch of study guaranteed by the department: Welcome page

Garantor of the study branch:

Program of study: Electrical Engineering, Power Engineering and Management

Type of study: Bachelor full-time

Required credits: 171
Elective courses credits: 9
Sum of credits in the plan: 180

Note on the plan:

Name of the block: Compulsory courses in the program

Minimal number of credits of the block: 155

The role of the block: P

Code of the group: 2015\_BEEMBAP Name of the group: Bachelor Project

Requirement credits in the group: In this group you have to gain 15 credits Requirement courses in the group: In this group you have to complete 1 course

Credits in the group: 15 Note on the group:

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
BBAP15	Bachelor thesis	Z	15	15s	L,Z	Р

Characteristics of the courses of this group of Study Plan: Code=2015\_BEEMBBE Name=Safety of the bachelor's studies

BEZB	Safety in Electrical Engineering for a Bachelor's Degree	Z	0					
The purpose of the safe	he purpose of the safety course is to give the students basic knowledge of electrical equipment and installation as to avoid danger arising from operation of it. This introductory course							
contains fundamentals	of Safety Electrical Engineering. In this way the students receive qualification of instructed person that enables them to work	on electrical equip	pment.					
BEZZ	Basic Health and Occupational Safety Regulations	Z	0					

The guidelines were worked out based on The Training Scheme for Health and Occupational Safety designed for employees and students of the Czech Technical University in Prague, which was provided by the Rector's Office of the CTU. Safety is considered one of the basic duties of all employees and students. The knowledge of Health and Occupational Safety regulations forms an integral and permanent part of qualification requirements. This program is obligatory.

Code of the group: 2015\_BEEMH

Name of the group: Humanities subjects

Requirement credits in the group: In this group you have to gain at least 4 credits (at most 28)

Requirement courses in the group: In this group you have to complete at least 1 course (at most 9)

Credits in the group: 4 Note on the group:

Characteristics of the courses of this group of Study Plan: Code=2015 BEEMH Name=Humanities subjects

B0B16ET1	Ethic 1	KZ	4						
Aim of this subject is	o provide the students an orientation not only in general problems of ethics but above all to offer instructions for solving various	situations of hum	an life. Essential						
parts of the subject are discussions in which students can react to lectures but also to actual questions coming with news and look for the communal answers.									
B0B16FIL	Philosophy	ZK	2						
We deal with the most important persons, schools and ideas of ancient philosophy. We are concerned especially on transdisciplinary nature of philosophy and connection of old									
philosophical though	s with recent problems of science, technology, economics and politics.								
B0B16FI1	Philosophy 1	KZ	4						
We deal with the mo	t important persons, schools and ideas of ancient philosophy. We are concerned especially on transdisciplinary nature of philo	sophy and connec	tion of old

of the results of the analysis and simulation of electrical circuits by means of software tools. B1B15EN1 Power Engineering 1 Z,ZK 6 B1B15EN2 Z,ZK Power Engineering 2 5 B1B17EMP Z,ZK Electromagnetic Field 5 This course gets its students acquinted with principles and applied electromagnetic field theory basics. ΚZ B1B34EPS Elektronics for Heavy-current engeneering 4 Knowledge of current basic passive and active electronic components. Structure, physical and circuit properties of components. Component behavior when working with both small and large analog, digital and optical signals. More complex circuit systems and communication technologies. Measuring the most important applications of modern semiconductor devices. B1B02FY1 Z,ZK Physics 1

and the second one is the electric and magnetic field. Within the framework of the classical mechanics, the students study the particle kinematics; dynamics of the mass particle, system of mass particles and rigid bodies. The students should be able to solve basic problems dealing with the description of mechanical systems, which they can meet during their further studies. The classical mechanics is followed by the relativistic mechanics, electric and magnetic field - both stationary as well as non-stationary. The students can use the facts gained in this course in the study of electrical circuits, theory of electrotechnical materials or radioelectronics. Apart of this, the knowledge gained in this course is required for the study of the consecutive course Physics 2.

The basic course of physics at the Faculty of Electrical Engineering - Physics 1, is devoted to the introduction into two important areas of physics. The first one is a classical mechanics

e course is an introduction to the fundamentals of complex analysis and its applications. Particularly to solving differential and difference opequations.	2400000			
the theory of waves—will give to the students basic insight into the properties of waves and maken in paile of the waves baried to the paile of the waves and the subject of the following section. Caushum mechanics and clear physics will complete the student's general education in physics. The knowledge gained in this course will help to the student's general education in physics. The knowledge gained in this course will help to the student's location of the waves he course is an introduction to the furdimentals of complex analysis.  So course is an introduction to the furdimentals of complex enalysis and its applications. The basic principles of Fourier, Laplace, and Z-transform are explained, including their plications, particularly to solving differential and difference equations.  BIDILAG Linear Algebra Paries.  The calculation of matrices (seleminansis, inverse marticise, and since map, eigenvalues and eigenvectors, diagonalisation, etc) is covered ene ch. The applications including system of linear equations, the generalty of a 30 space (including the scalar product and the vector product) and SVD.  BIDIGAME Macro and Microelkonomics.  BIDIGAME Macro and Microelkonomics of the matrices of the intension of the course is to introduction; to the during system, monetary both, laborator, because the fundamental and integral calculus of functions of one variable.  BIDIGAME Macro and Microelkonomics of the course is to introduce students to basists of differential and integral calculus of functions of one variable.  BIDIGAME Macro and Microelkonomics of the course is to introduce students to basics of differential and integral calculus of functions of one variable.  BIDIAMAE Macro and Microelkonomics of the course is to introduce students to basics of differential and integral calculus of functions of one variable. e course provides the basic terms and knowledge in electric drives and in the issues related to this discipline as well. The lectures are focused on the basic of electric drives log attrol, continuous control and also discrete control, and on the characteristics of used controllers in practice. Further, the basic control structures of drives with DC and AC machines explained.  IB14ZSP Electric Machines and Apparatuses Basics Z,ZK 5  e course explains the principles of machines for convertsion of mechanical energy to electrical and back. It discusses the principles of basic functions and properties of rotating in-rotating electric machines. Following the behavior of electrical machines are discussed basic devices for protection and switching, including behavioral and switching problems are course extends necessary knowledge of the technical documentation, technical text and its presentation. The second half of the semester is focused on an explanation and practic basics electrotechnics so that knowledge of students are increased to the level needed in the next semesters.  IB14ZVE Power Electronics Z,ZK 4	B1B13PPS The subject is focused at a processing, softwandamental block of B0B01STP The aim of the course nathematical tools to B1B13VST Troduction systems in an impregnation procechnologies using plate B1B15VYA B1B13VVZ The topic of the subje	Industrial computer systems In on basic knowledges about computer control systems used in electrotechnic engineering and energetics. Students works with a retrools and application examples. There are presented elementary digital circuits, the representation of numbers and their interprocessor and microcomputer. The single chip microcomputer, embedded application, industrial PC and design to industrial Statistics and Probability is to introduce students to the fundamentals of probability theory and mathematical statistics, their computational methods a practical examples.  Technology in Electrical Engineering electrical engineering electrical engineering will be characterized, their arrangement and basic technologies for mechanical joints and plastic parts examples will also been presented. Next part of a course will be focused on basic technologies for semiconductors including possum, packaging and basic assembly technologies will also been presented.  Computational Applications  Manufacturing of Power Devices at is focused on manufacturing of power electrical machines and devices from construction and technological point of wiev. Note that the present of th	th hardware for data reprocessing in microstrial condition are processing as well as application. So were integration. I) The B2 English Exam is a compulsory subject for all Faculty of Electrical Engineering students at the Czech Technical University. According to the Study and Examination Rules and Regulations for Students at CTU (Part III, Article 4), a compulsory subject is one whose completion is a necessary condition in order to successfully complete the study programme. In addition, this requires the passing of an examination evaluated on the scale A, B, C, D, or E (SERR Part III, Article 6). II) According to the Common European Framework of Reference for Languages (CEFR), an international standard for describing language ability, the definition of an English language learner who has achieved the B2 (Upper-Intermediate) level is one who can understand the main ideas of complex text on both concrete and abstract topics, including technical discussions in his/her field of specialisation. Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party. Can produce clear, detailed text on a wide range of subjects and explain a viewpoint on a topical issue giving the advantages and disadvantages of various options. III) Students who have successfully passed an approved international exam within the past five years may present their certificate to the Department of Languages, Faculty of Electrical Engineering. Upon approval, students are then exempt from both the Written Test and the Oral Part. For a list of approved international exams go the department website: http://jazyky.fel.cvut.cz/

## List of courses of this pass:

Code	Name of the course	Completion	Credits
A003TV	Physical Education	Z	2
B0B01DRN	Differencial Equations and Numerical Analysis	Z,ZK	4
	ces students to the classical theory of ordinary differential equations (separable and linear ODEs) and also to bsics of numerical met	*	
stability, numerica	I solutions of algebraic and differential equations and their systems). The course takes advantage of the synnergy between theoretic	al and practical po	int of view.
B0B01KAN	Complex Analysis	Z,ZK	5
The course is an	introduction to the fundamentals of complex analysis and its applications. The basic principles of Fourier, Laplace, and Z-transform	are explained, inclu	iding their
	applications, particularly to solving differential and difference equations.		
B0B01LAG	Linear Algebra	Z,ZK	8
The course covers t	he initial parts of linear algebra. Firstly, the basic notions of a linear space and linear mappings are covered (linear dependence and ind	ependence, basis,	coordinates,
etc). The calculus	of matrices (determinants, inverse matrices, matrices of a linear map, eigenvalues and eigenvectors, diagonalisation, etc) is covered		ons include
	solving systems of linear equations, the geometry of a 3D space (including the scalar product and the vector product) and S	VD.	
B0B01MA1	Mathematical Analysis 1	Z,ZK	7
	The aim of the course is to introduce students to basics of differential and integral calculus of functions of one variable.		
B0B01MA2	Mathematical Analysis 2	Z,ZK	7
The subject cover	s an introduction to the differential and integral calculus in several variables and basic relations between curve and surface integrals	. Other part contain	ns function
	series and power series with application to Taylor and Fourier series.		
B0B01STP	Statistics and Probability	Z,ZK	5
The aim of the co	purse is to introduce students to the fundamentals of probability theory and mathematical statistics, their computational methods as	well as applications	s of these
	mathematical tools to practical examples.		
B0B04A21	English Language A2-1	Z	
,	The course is open to students who are beginners in their second language. Course objective: Achieving competence in basic E	nglish.	,
B0B04A22	English Language A2-2	Z	0
The course is ope	en to students who are beginners in their second foreign language. The course objective is to develop and sustain their basic knowle	dge of the English	language.
B0B04B11	English Language B1-1	Z	0
Course objective: B	roadening the basic knowledge of general English; mastering basic specialised language; focusing on text analysis and vocabulary exp	pansion; understan	ding spoken
	English.		
B0B04B12	English Language B1-2	Z	0
