## Characteristics of the courses of this group of Study Plan: Code=NG20230001 Name=Geodézie a kartografie, spec. Inženýrská geodézie, 1. semestr

101MM4G Mathematics 4G Z,ZK 4 https://mat.fsv.cvut.cz/bobok/ 124UPST Introduction to Civil Engineering ΖK 2 Basic classification of building structures, basics of building structures - construction elements, construction systems, construction technology, construction process. Technical documentation - levels of technical documentation, principles of technical documentation. Foundation structures of buildings - construction trenchs, surface foundations, deep foundations. Substructure - construction, expansion, waterproofing. Load-bearing tructures of buildings - vertical land horizontal oad-bearing structures, roof structures - building technical solutions. Overhanging structures, stairs and ramps - structural and material solutions. Completion construction - types, technology, construction technical solutions. 154ACIG AutoCAD for Engineering Surveying ΚZ 2 Basics of AutoCAD - working with files, file types, compatibility, user interface, control, drawing, grips, tracing, levels, measurements, dimensions, blocks, tables, external references, working with rasters, auxiliary commands. 154ING2 Engineering Surveying 2 Z,ZK 5 Planning and evaluating of precision of the geodetic activities, evaluation of precision of measurement and setting-out of distances, angles and verticals including sources of errors. Geodetic setting-out networks positional, altimetric and spatial (derivation of precision), evaluation of precision of positional and altimetric setting-out of elementary parts of a building structure, derivation of main elements of transition curve including solution of circular arcs with transition curves, evaluation of precision and provableness of building structures shifts and deformations.

155DPRZ	Remote Sensing	Z,ZK	5				
The subject is focused on explanation of physical bases allowing to use remote sensing, on technical explanation of methods of data collection/			vior of individual				
materials/land covers as	s an interaction with electromagnetic radiation, and on possibility to use RS for many applications.						
155GPL2	Survey Sketches 2	KZ	2				
Students will learn about	It the preparation of geometric plans through practical exercises. It is mainly about the orientation of changes for updating the	e cadastral registe	r by various				
measuring technologies	and the subsequent processing of geometric plans as a technical basis for the introduction of these changes into the cadastra	al register in location	ons with different				
technical conditions - ar	nalogue cadastral map, digital cadastral map (DKM, KMD, etc.)						
155KAT3	Cartography 3	Z,ZK	5				
Advanced cartography,	web map services and applications, dynamic maps, spatial data formats, data sources, standardization, web maps, trends in	cartography.					
155TGD3	Theoretical geodesy 3	Z,ZK	5				
Vector and scalar description of gravitational field of the Earth. Properties of gravitational potential and its derivatives for basic bodies. Description of gravity field of the Earth. Normal							
gravity field of normal bodies. Approximation of the shape of the Earth in form of geoid or level ellipsoid. Stokes' and Molodensky's solution of the shape of the Earth. Consequences							
of this procedures for ge	of this procedures for geodesy (geoid, quasigeoid, heights). Construction and models of (quasi)geoid. Physical priciples of gravity surveying.

# Characteristics of the courses of this group of Study Plan: Code=NG20180002 Name=Geodézie a kartografie, spec. Inženýrská geodézie, 2. semestr

136UDST	Introduction to Transportation Facilities Engineering	ZK	2		
The subject is designed	as a course containing basic knowledge of transport construction. The lectures are divided into two parts, road (9 lectures) a	nd railway (4 lect	ures). In the road		
part, students will learn	about the Road Act and related legislative and technical regulations, their impact on road design. Design categories of roads	s and highways, d	lesign speed,		
alignment and elevation	, road and highway layout in cross section, earthwork - dimensions, shapes, drainage. Urban roads, division and designation, (	definition of MK s	pace, differences		
in design, operation and	l equipment. Pavement, division, design principles. Safety equipment, junctions and crossings. In the lectures devoted to rail	transport, basic to	erminology from		
the field of rail transport	, design parameters of the track, basic shapes of the earth body, composition of the railway top and bottom, including the Ac	t on Railways, wil	l be presented.		
Furthermore, the basic	design parameters of urban rail transport - trams and subways, history, principles and principles of tram line and subway con	struction will be p	presented. The		
interaction of rail transpo	ort with the environment will be mentioned. The final lecture will be devoted to railway geodesy, geodetic foundations for ensu	uring the spatial lo	ocation of the		
track.					
154ING3	Engineering Surveying 3	Z,ZK	5		
Legislative regulations f	or geodetic activities in the capital construction, technical standards, geodetic ground for designing, geodetic activities in the	building structure	s, transportation		
engineering, water reso	urce management, industry and energetics (specificities of setting-out, check of geometrical parameters of structures, rectific	cation of technolo	gical equipment		
etc.).					
154SPG	Land Surveying in Civil Engineering and Industry	Z,ZK	5		
Subject 154SPG belong	s to the group of engineering geodesy subjects. It builds on previous studies. It is devoted to the issue of surveying work in som	ne specific areas o	of documentation		
and preparation of recor	nstruction of historic and other construction, transport, water management and industrial objects.				
154VYIG	Engineering Surveying Fieldwork Training (2 weeks)	KZ	2		
Measurement and calcu	llation of the geodetic micronetwork for industry purposes, precise height measurements, method of the temporary station, c	alculation of the s	setting out data,		
setting out of the constr	uction with check measurement, setting out of the road with arcs and transition curves, measurement and processing of the	cross sections an	d longitudinal		
profile. Measurement ar	nd calculation of the 3D network with use of the electronic tachymeter.				
155FTG2	Photogrammetry 2	Z,ZK	5		
Aerial photogrammetry.	Relative and absolute orientation of aerial photos. Analogue, analytic and digital interpreting devices, computer support. Phot	ogrammetric meth	nods in mapping.		
Orthophoto, its accuracy. Photo triangulation, AAT, block and bundle adjustments, analytical photogrammetry. Digital photogrammetry, digital orthophoto, digital photogrammetric					
stations, optical correlat	ion systems, aerial laser scanning, using of drones (RPAS).				
155PKAR	Project - Cartography	KZ	5		
Map creation in GIS, ge	odatabase, data model, symbology, compositional elements of maps, geographical nomenclature, errors in maps.				

155TG4	Theoretical geodesy 4	Z,ZK	5		
Theoretical Geodesy 4 introduces students to the field of space geodesy, i.e. using satellite observations of the Earth to define and maintain global coordinate systems, the Earth					
orientation parameters, models of the Earth's gravity field and ocean topography. The outputs of space geodesy form the basis from which one of the most widely used measurement					
techniques in geodesy	- GNSS – is based.				
155VTTG	Fieldwork Training in Theoretical Geodesy	KZ	1		
Landsurveying in terrain is intended for the practice of measurement methods of geodesy and data processing work in the creation of a point field. Includes tasks: Long Range					
Triangulation and Trilateration (TRG) Determining the course of the quasi-geoid (GEO) Remeasurement and adjustment of height points with very precise leveling (VPN) Azimuth					
determination using the gyrotheodolite, gravimetric measurements

#### Characteristics of the courses of this group of Study Plan: Code=NG20230003 Name=Geodézie a kartografie, spec. Inženýrská geodézie, 3. semestr

o. Schest						
154BIMG BIM in Surveying	Z,ZK	2				
Basic information about BIM and the link to geodetic measurements. Ways of obtaining and processing geodetic data for the BIM model. Measurement	nt methods in rela	ition to LOG and				
LOD. Creation of a simple BIM model.						
154EZKA Economy in Land Surveying and Cadastre of Real Estates	Z,ZK	3				
The subject summarizes general economic terms with a specialization in the field of geodesy and cartography.						
154ING4 Engineering Surveying 4	Z,ZK	5				
The subject deals with the topic of mining surveying in Czechia.						
154KOME Control Measurement	KZ	2				
Accuracy of geometric parameters in construction, control measurement of construction objects, accuracy of geodetic methods in control measurement a	nd determination	of displacements				
of construction and natural objects, determination of stability of reference points. Interpretation of displacement measurement results and relevance	for monitoring geo	ometric and				
physical properties and for diagnostics of structures and natural objects. Links to other non-geodetic monitoring methods.						
154LSK Laser Scanning	KZ	2				
Principles and theory of laser scanning systems (LSS), main types of LSS, influences impact on the accuracy of measuring, general sequence of po	int cloud process	ing, information				
about the most important LSS, practical applications in civil engineering and related branches, economical advantages, work safety.						
154MC3D Microstation 3D	KZ	2				
Drawing in the system Bentley Microstation, creation, editing and visualisation of objects. A subject is concluded by a project, and it is a base for the	classification of s	tudents.				
154MEGE Metrology in Geodesy	KZ	2				
The basis of the course is metrological terminology and statistical tests used in geodesy. The course is focused on application of standard ISO 1712	3 Optics and optic	al instruments				
- Field procedures for testing geodetic and surveying instruments. Participants get both practical and theoretical experience with testing of geodetic	instruments. They	perform				
measurements with total stations and levelling instruments in the field and they also use statistical methods for determining precision of the instruments.						
155MSPD Modern Methods of Spatial Data Acquisition	Z,ZK	5				
The course focuses on new modern and unconventional methods of geospatial data collection and presentation. Contains information on terrestrial, aerial and mobile laser scanning,						
about remote sensing and its methods, about hyperspectral imaging. Further, it focuses on the progressive method in geomathics - on RPAS. It informs about types, usage, legislation						
as well as about sensors and software for automatically processing for image data. Finally, geophysical methods and virtual reality technologies are presented.						

155PKAZ	Law in Cadastre and Surveying	ZK	2	
Public and private, subs	tantive and procedural law. Overview of legal regulations governing the cadastre of real estate (CN) and land surveying. Prede	cessors of surveyi	ing and cadastral	
authorities in the past.	Surveying and cadastral authorities today. Thing, thing in the legal sense, division of things, immovable things, part of a thing	and accessories	of a thing. Land,	
parcel of land, land in jurisprudence, building, building in jurisprudence, small buildings, temporary buildings, building, unit. Origin of the CN and its predecessors, the Cadastral Act				
and implementing regul	ations, definition and purpose of the CN. Content of the CN, cadastral register, registration of rights in the CN, basic provisio	ns. Rights entered	d into the CN by	
deposit, title deed, prop	osal for deposit, annexes to the proposal, deposit procedure. Deposit procedure, record, note. Administration of the CN, entr	es of other data,	acceptance of	
data, time limits for entr	y in the CN, deposit of documents in the collection of documents, revision of the CN, correction of errors, obligations of owner	ers and other bene	eficiaries,	
municipalities and publi	c authorities. Surveying activities and geometrical plans, publicity of the CN, provision of CN data, offences, common, transit	onal and final pro	visions of the	
Cadastral Act. Real esta	ate contracts. Previous legislation on land surveying, Land Surveying Act, introductory provisions, surveying activities. Rights	and obligations in	n carrying out	
surveying activities, ver	fication of results of surveying activities, geodetic reference systems and state mapping works, offences. Visit to the land regis	ter in the building	of the Surveying	
and Cadastral Authoritie	es in Prague Kobylisy.			
155VFG	Photogrammetry -Project	KZ	5	
practical metrical docur	nentation of historical objects and sites, technology of documentation and data processing by modern methods

### List of courses of this pass:

Code	Name of the course	Completion	Credits			
101MM4G	Mathematics 4G	Z,ZK	4			
	https://mat.fsv.cvut.cz/bobok/					
124UPST	Introduction to Civil Engineering	ZK	2			
Basic classifica	tion of building structures, basics of building structures - construction elements, construction systems, construction technology, cons	truction process. To	echnical			
documentation - lev	rels of technical documentation, principles of technical documentation. Foundation structures of buildings - construction trenchs, surface	foundations, deep	foundations.			
Substructure - con:	struction, expansion, waterproofing. Load-bearing tructures of buildings - vertical land horizontal oad-bearing structures, roof structure	s - building technic	al solutions.			
Over	hanging structures, stairs and ramps - structural and material solutions. Completion construction - types, technology, construction tec	chnical solutions.				
136UDST	Introduction to Transportation Facilities Engineering	ZK	2			
The subject is desi	gned as a course containing basic knowledge of transport construction. The lectures are divided into two parts, road (9 lectures) and	railway (4 lectures)	. In the road			
part, students wil	I learn about the Road Act and related legislative and technical regulations, their impact on road design. Design categories of roads a	and highways, desi	ign speed,			
alignment and elev	ation, road and highway layout in cross section, earthwork - dimensions, shapes, drainage. Urban roads, division and designation, defi	nition of MK space	, differences			
in design, operatio	n and equipment. Pavement, division, design principles. Safety equipment, junctions and crossings. In the lectures devoted to rail trai	nsport, basic termi	nology from			
the field of rail tran	sport, design parameters of the track, basic shapes of the earth body, composition of the railway top and bottom, including the Act o	n Railways, will be	presented.			
Furthermore, the	basic design parameters of urban rail transport - trams and subways, history, principles and principles of tram line and subway const	ruction will be pres	ented. The			
interaction of rail	transport with the environment will be mentioned. The final lecture will be devoted to railway geodesy, geodetic foundations for ensur	ing the spatial loca	tion of the			
	track.					
154ACIG	AutoCAD for Engineering Surveying	KZ	2			
Basics of AutoCA	Basics of AutoCAD - working with files, file types, compatibility, user interface, control, drawing, grips, tracing, levels, measurements, dimensions, blocks, tables, external references,					
	working with restore, auxiliary commands					

154BIMG	BIM in Surveying	Z,ZK	2
Basic information a	about BIM and the link to geodetic measurements. Ways of obtaining and processing geodetic data for the BIM model. Measurement n	nethods in relation	to LOG and
	LOD. Creation of a simple BIM model.		
154DPM	Diploma Thesis	Z	30

155TG4	Theoretical geodesy 4	Z,ZK	5		
Theoretical Geodesy 4 introduces students to the field of space geodesy, i.e. using satellite observations of the Earth to define and maintain global coordinate systems, the Earth					
orientation parameters, models of the Earth's gravity field and ocean topography. The outputs of space geodesy form the basis from which one of the most widely used measurement					
techniques in geodesy – GNSS – is based.					
155TGD3	Theoretical geodesy 3	Z,ZK	5		
Vector and scalar description of gravitational field of the Earth. Properties of gravitational potential and its derivatives for basic bodies. Description of gravity field of the Earth. Normal					
gravity field of normal bodies. Approximation of the shape of the Earth in form of geoid or level ellipsoid. Stokes' and Molodensky's solution of the shape of the Earth. Consequences					
of this procedures for geodesy (geoid, quasigeoid, heights). Construction and models of (quasi)geoid. Physical priciples of gravity surveying.					
155VFG	Photogrammetry -Project	KZ	5		
practical metrical documentation of historical objects and sites, technology of documentation and data processing by modern methods					
155VTTG	Fieldwork Training in Theoretical Geodesy	KZ	1		
Landsurveying in terrain is intended for the practice of measurement methods of geodesy and data processing work in the creation of a point field. Includes tasks: Long Range					
Triangulation and Trilateration (TRG) Determining the course of the quasi-geoid (GEO) Remeasurement and adjustment of height points with very precise leveling (VPN) Azimuth					
determination using the gyrotheodolite, gravimetric measurements
