Recomended pass through the study plan

Name of the pass: Master program, unspecified branch, in Czech, 2020

Faculty/Institute/Others:

Department:

Pass through the study plan: Mgr. programme, for the phase of study without specialisation, ver. for 2020 and higher

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Informatika

Type of study: Follow-up master full-time

Note on the pass: Spole ný magisterský plán p ed p i azením do oboru, verze 2020.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assessment, Z - assessment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role

List of courses of this pass:

Code	Name of the course	Completion	Credits						
BI-AG2.21	Algorithms and Graphs 2	Z,ZK	5						
This course, prese	This course, presented in Czech, introduces basic algorithms and concepts of graph theory as a follow=up on the introduction given in the compulsory course BI-AG1.21. It further delves into advances data structures and amortized complexity analysis. It also includes a very light introduction to approximation algorithms. For English version of the course see								
	BIE-AG2.21.								
BI-APS.21	Architectures of Computer Systems	Z,ZK	5						
Students will lear	n the construction principles of internal architecture of computers with universal processors at the level of machine instructions. Spec	ial emphasis is giv	en on the						
	processing and on the memory hierarchy. Students will understand the basic concepts of RISC and CISC architectures and the prince	-							
	processors, but also in superscalar processors that can execute multiple instructions in one cycle, while ensuring the correctness of	•							
	e further elaborates the principles and architectures of shared memory multiprocessor and multicore systems and the memory cohe systems.	rence and consiste	ency in such						
BI-BEK.21	Secure Code	Z,ZK	5						
The students will lea	arn how to assess security risks and how to take them into account in the design phase of their own code and solutions. After getting fa	miliar with the thre	at modeling						
theory, students	gain practical experience with running programs with reduced privileges and methods of specifying these privileges, since not every	program needs to	run with						
	leges. Dangers inherent in buffer overflows will be practically demonstrated. Students will be introduced to the principles of securing								
-	database systems, web, remote procedure calls, and sockets in general. The module concludes with Denial of Service attacks and the	e defense against							
BI-BLE	Blender	Z,ZK	4						
	ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in	•							
animation. It o	ffers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	nics applications) c	1						
BI-CCN	Compiler Construction	Z,ZK	5						
	ictory class on compiler construction for bachelor students in computer science. The goal of the class is to introduce basic principles								
	nd the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching								
BI-EHA.21	Ethical Hacking	Z,ZK	5						
e e	purse is to introduce students to the field of penetration testing and ethical hacking. The course deals with cybersecurity threats, vuln		•						
exploitation in com	puter networks, web applications, wireless networks, operating systems, and others like the Internet of Things or cloud. The focus is	on hands-on exper	rience with						
	vulnerabilities testing and the following process of penetration test documentation.		_						
BI-FMU	Financial and Management Accounting	Z,ZK	5						
	se is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the pa	•							
	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification of provides and an automatic students with a legal modification of provides and an automatic students with a legal modification of provides and an automatic students with a legal modification of provides and an automatic students with a legal modification of provides and an automatic students with a legal modification of provides at the course provides at the students with a legal modification of provides at the students with a legal modification of provides at the students with a legal modification of provides at the students with a legal modification of provides at the students with a legal modification of the students with a legal modification		•						
	ations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manage Business Inteligence moduls in Business information systems.	ment accounting at	re base or						
		774	5						
BI-FTR.1	Financial Markets This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	Z,ZK	5						
		774	5						
BI-JPO.21	Computer Units their basic knowledge of digital computer units acquired in the obligatory course of the program (BIE-SAP), get acquainted in detail v	Z,ZK	-						
	puter units and processors and their interactions with the environment, including accelerating arithmetic-logic units and using approp								
-	e organization of main memory and other internal memories (addressable, LIFO, FIFO and CAM) will be discussed in detail, including								
	el and serial data transmissions. They will also get acquainted with the methodology of controller design, with the principles of comm	-							
	d the architecture of the bus system. The problems will be practically evaluated in the labs and with the help of the educational micropro								
	and programmable hardware design kits (FPGA).	0							
BI-MPP.21	Methods of interfacing peripheral devices	Z,ZK	5						
	ed on methods for interfacing of peripheral devices. Interfacing of real peripheral devices is focused on techniques based on Universa	I ' I	-						
	ide and peripheral devices side. Labs are practically oriented. Students gain experience with implementation of relevant parts of USE	, ,							
	drivers, simple application development, and APIs of selected devices.								

Students learn back	Programming Languages and Compilers	Z,ZK	5
	asic compiling methods of programming languages. They are introduced to intermediate representations used in current compilers G		
create a specificat	ion of a translation of a text that conforms a given syntax, to a target code and also to create a compiler based on the specification. T only a programming language but any text in a language generated by a given LL input grammar.	ne compiler can tra	anslate not
BI-PMA	Programming in Mathematica	Z,ZK	4
	rking with modern technical and scientific software. Students will learn how to use different programming styles (functional programm etc.), how to create dynamic interactive applications and visualisations, data processing and presentations.		ogramming,
BI-SOJ	Machine Oriented Languages	Z,ZK	4
	rse will gain an ability to create their own programs in the assembly language of the most common PC platform focusing on optimal us		
and efficient cooper	ration of software with hardware. Next, there will be discussed x86 specifics of the majority of OSes from the application point of view lin	nked to higher level	languages.
BI-SRC.21	This knowledge will be used during reverse engineering, optimization, and evaluation of code security. Real-time systems	Z,ZK	5
	he basic knowledge in the real-time (RT) system theory and in the design methods for RT systems including the dependability issues		-
	perimentally verified in computer labs. The course is mainly focused on embedded RT systems, therefore the design kits in the lab and		-
	course.		
BI-SVZ.21	Machine vision and image processing	Z,ZK	5
	are becoming a common part of life by being universally available. Related to this phenomenon is the need to process and evaluate in s to different types of camera systems and a variety of methods for image and video processing. The course is focused on practical use	-	
	problems of practice that the graduates may encounter.	or camera systems	s ior solving
BI-VHS.21	Virtual game worlds	Z,ZK	5
In the course stude	nts learn methods to create a complex virtual world. It is a follow-up course of basic courses of the PG specialization (BIE-MGA, BIE-P		knowledge
of the theory of gam	ne design, of principles of writing dialogues and characters in order to create a functional virtual world. Within the labs they get practical	skills within team d	evelopment
	work on the semester project.	771	
BI-VMM	Selected Mathematical Methods geometric properties of linear spaces with inner product. Next, we introduce and analyze the discrete Fourier transform (DFT) and i	Z,ZK	4
	th differential calculus of functions involving multiple variables. We present methods for the localization of extreme values of functions		
	es and quadratic forms. In addition, we introduce the least square method. The last part of the course is devoted to optimization and c		
	and the Simplex method is analyzed in more detail.		
NI-ADM	Data Mining Algorithms	Z,ZK	5
	s on algorithms used in the fields of machine learning and data mining. However, this is not an introductory course, and the students		-
basics. The emphas	sis is put on advanced algorithms (e.g., gradient boosting) and non-basic kinds of machine learning tasks (e.g., recommendation syst methods).	tems) and models (e.g., kernel
NI-ADP	Architecture and Design patterns	Z,ZK	5
	s course is to provide students with both work knowledge about the underlying foundations of object-oriented design and analysis as		-
the challenges, issu	ues, and tradeoffs of advanced software design. In the first part of the course, the students will refresh and deepen their knowledge o	f object-oriented pr	rogramming
-	n the commonly used object-oriented design patterns that represent the best practices for solving common software design problems. I	-	
will be introduced to	the principles of software architecture design and analysis. This includes the classical architectural styles, component based systems architectures used in large-scale distributed systems.	, and some advanc	ed software
NI-AFP	Applied Functional Programming

NI-BKO	Error Control Codes	Z,ZK	5
The goa	al of the course is to present various ways to detect or correct individual errors and burst errors in data stored into memories or transm	nitted via channels.	
NI-BML	Bayesian Methods for Machine Learning	KZ	5
	sed on practical use of basic Bayesian modeling methods in the dynamically evolving machine learning theory. In particular, it studies t		
	description of real phenomena, as well as their subsequent use, e.g., for forecasting of future evolution or learning about the hidden v		
-	tions etc.). The emphasis is put on understanding of explained principles and methods and their practical adoption. For this purpose, a i will be presented to students, for instance, 2D/3D object tracking, radiation source term estimation, or separation in medical imaging.		-
	some of them.		, 10 00110
NI-BPS	Wireless Computer Networks	Z,ZK	4
Students will lear	n about the modern technologies, protocols, and standards for wireless networks. They will understand the routing mechanisms in ad	hoc networks, mult	ticast and
broadcast mecha	nisms, and data flow control mechanisms. They will also learn about principles of communication in sensor networks. They get knowle	• ,	chanisms
	for wireless networks and get skills of configuration of wireless network elements and simulation of wireless networks using suitab		
NI-BUI	Business Informatics rse is to focus on operational, tactical and strategic management of business informatics. Students will gain knowledge in the areas of bu		5
	architectures in enterprise informatics. They will also learn about the principles, models and standards (ITIL, COBIT) in IT manageme	-	-
	ind resource management (sourcing). Students will learn the process of creating and implementing information strategy, IT Governance		-
business and the	ne context of information strategy with global business strategy. They will also gain knowledge in the areas of economic IT manageme	nt, revenue and inve	estment
	management, IT investment evaluation and human resources management in IT (roles CIO, CEO, CFO).		
NI-BVS	Embedded Security	Z,ZK	5
-	c knowledge in selected topics of cryptography and cryptanalysis. The course focuses particularly on efficient implementations of crypto nbedded systems). Students gain a good overview of functionality of (hardware) cryptographic accelerators, smart cards, and resources	- · ·	
	of computer systems.		
NI-CCC	Creative Coding and Computational Art	KZ	4
Students work on	practical tasks, get acquainted with creative and yet proven methods of visualizing various types of data. The course freely follows the		
	duces students to suitable visualization methods for traditional as well as for open data. It combines well-known visualization technique		0
rnoaern technolog	ies. The aim is to create an interesting visualization project. It is planned to work closely with IPR CAMP (Center of Architecture and N (Institute of Intermedia FEL).	ietropolitan Plannin	ig) and IIM
NI-CPX	Complexity Theory	Z,ZK	5
	rn about the fundamental classes of problems in the complexity theory and different models of algoritms and about implications of the		-
	(in)tractability of difficult problems.		
NI-CTF	Capture The Flag	KZ	4
	The course is designed to introduce students to CTF competitions and let them gain practical experience in the field of cyber se		
NI-DDM	Distributed Data Mining	KZ	4
	n state-of-the-art approaches for distributed data mining and parallelization of machine learning algorithms. Students will gain hands c amework Apache Spark and with existing distributed DM / ML algorithms. They will learn principles of their parallel implementations a	-	-
	anework Apache Spark and with existing distributed DM/ ML algorithms. They will learn philoples of their parallel implementations a approaches to parallelize other algorithms. The course is prezented in czech language.	nu wiii be capable i	o propose
NI-DDW	Web Data Mining	Z,ZK	5
Students will lea	arn latest methods and technologies for web data acquisition, analysis and utilization of the discovered knowledge. Students will gain	·	mining
techniques for Web	o crawling, Web structure analysis, Web usage analysis, Web content mining and information extraction. Students will also gain an overview	w of most recent dev	elopments/
	in the field of social web and recommendation systems.	7	
NI-DID	Digital drawing roduce students to the basic principals of digital drawing and graphical design. Students will gain understanding of composition, persp	Z	2
	y apply in their own design works. Students will also gain experience in drawing and painting with digital and analog tools. The course		
	r learn drawing and painting. The course is organized as a thematic practices covering parts of theory and practical exercise to practic		
NI-DIP	Diploma Project	Z	30
NI-DNP	Advanced .NET	Z,ZK	4
	equire an overview of platform .NET and will gain knowledge about technologies ASP.NET, Entity Framework, WPF, .NET MAUI and al	-	
DevOps and GI	T. Students will get practical experience in semestral work where they will create a client-server application utilizing technologies ASP. (Blazor, .NET MAUI or WPF) and also Azure DevOps and GIT.	NET, Entity Framew	vork and
NI-DPH	Game Design	Z,ZK	5
	ements the NI-APH (Architecture of Computer Games) and BI-VHS (Virtual gaming worlds) course, while focusing primarily on game d		
interested in deep	per knowledge of the principles used for games design, such as: level design, gameplay design, character design, game mechanics d	esign, storytelling, a	and game
development cycle	. The students will get an overview of game development from the designer's perspective, from theoretical concepts to practical impler	nentation applied to	semestral
	projects.	7 71/	-
NI-DSS	Decision Support Systems rse is to provide students with knowledge and skills in decision support systems, their classification (Powerova), selected principles of	Z,ZK	5 el-oriented
	ented decision support systems. Students will also gain knowledge of multicriterial decision-making methods and game theory. They will		
-	conceptually and ontologically oriented decision support systems and the basics of distribution, optimization and evolution methods a		
NI-DSV	Distributed Systems and Computing	Z,ZK	5
	uced to methods for coordination of processes in distributed environment characterised by nondeterministic time responses of computing		
channels. They lea	rn basic algorithms that assure correctness of computations realized by a group of loosely coupled processes and mechanisms that s	upport high availab	ility of both
NI-DSW	data and services, and safety in case of failures. Design Sprint	Z	2
	on projects using the Design Sprint method, developed by Google. THanks to this method the teams are able to go from idea to validat		
	udents will get familiar with the method as participants. Through practical challenges they will try the whole 5 day process starting with		
	testing the prototypes (plus final presentation).		
NI-DVG	Introduction to Discrete and Computational Geometry	Z,ZK	5
I The second defendence			
The course intends	s to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with		ntal notions
	s to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with of this discipline, and to be able to solve simple algorithmic problems with a geometric component.	the most fundamen	
NI-DZO	s to introduce the students to the discipline of Discrete and Computational Geometry. The main goal of the course is to get familiar with	the most fundamen	4

	processing. This course will introduce algorithms solving the following practical applications: edge-aware editing, tone mapping, HDR abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conv		-
	gid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, ac		
NI-EDW	Enterprise Data Warehouse Systems	Z,ZK	5
	ta Warehouses course focuses on the area of business intelligence. Students will be introduced to business intelligence methods and		-
not only in design	ing warehouses and various architectures, but also their deployment and maintenance. This course also includes an introduction to t visualization.	he area of reporting	g and data
NI-EHW	Embedded Hardware	Z,ZK	5
	basic laws that govern digital design and basic techniques to use them. It deals with both large and small scale systems. This is the		-
systems, that profit	t from their specialized structure for effective computation and acceleration. Design of fast custom computing machines is discussed, of internal communication, parallelism extraction and utilization in special structures and system architectures.	including standard	ized means
NI-EPC	Effective C++ programming	Z,ZK	5
	v to use the modern features of contemporary versions of the C++ programming language for software development. The course focu		ng effectivity
	ficiency in the form of writing maintainable and portable source code and creating correct programs with low memory and processor t		
NI-ESC	Experimental Project Course	KZ	8
	ect course offers a holistic exploration of the design process, providing students with a well-rounded understanding of the principles, n plogy-driven solutions that are user-centric and industry-relevant. Throughout the semester, students will work on real-world design pro-	-	
	n to integrate theory with practical application. Through a hands-on, project-based learning approach, students will develop their skills		
	user experience evaluation, as well as gain experience working in a team to design and prototype a functional solution."		
NI-ESW	Embedded Software	Z,ZK	5
	e course acquainted students with the specifics of software development for embedded systems. The course covers the areas from the back of a contract and a contract on the specific of software development of an added accuration outcome size of a contract of the specific of software development of the specific of the specific of software development of the specific of software development of the specific of software development of the specific of the specific of software development of the specific of the

	combining knowledge of various courses like nature inspired algorithms, data mining algorithms, image recognition and web techn	nologies	
NI-KOD	Data Compression	Z,ZK	5
Students are intr	oduced to the basic principles of data compression. They will learn the necessary theoretical background and get an overview of data	compression meth	ods being
used in practice. T	he overview covers principles of integer coding and of statistical, dictionary, and context data compression methods. In addition, stude	ents learn the fundation	amentals of
	lossy data compression methods used in image, audio, and video compression.		
NI-KOP	Combinatorial Optimization	Z,ZK	6
			-
The students will	gain knowledge and understanding necessary deployment of combinatorial heuristics at a professional level. They will be able not only	y to select and imp	lement but
	also to apply and evaluate heuristics for practical problems.		
NI-KTH	Combinatorial Theories of Games	Z,ZK	4
Traditional game	e theory is a branch of mathematics, which has broad applications in economy, biology, politics and computer science. This theory stud	lies the behaviour	of agents
(players) of a cer	tain competitive process by designinng a mathematical model and investigating the strategies. The traditional task of classical game the	neory is to find the	equilibria,
which are the state	es of the game where no player wants to deviate from his strategy. Historically, the second big development in game theory of two-player	r full-information co	mbinatorial
games, was by C	onway, Berlekamp and Guy. They developed a theory, originally used for solving end-games in Go, into a full fledged field. The idea is	to evaluate games	such that
otherwise incom	patible games can be added, that is, played simultaneously. This led to the algrebraic approach to study combinatorial games. The thir	d most important s	step is the
	established the theory of positional games (like tic-tac-toe and hex). In analysis of these game, one cannot escape the brute-force tra		-
	k introduced the "false probabilistic method", which aims to tackhle this problem. In this course we build the foundation of the theory o	-	
	on theoretical analysis of games and building the theory, not on the programming aspects of game solving algorithms. The course requ		-
-	v analyse, think and proof. The course is also suitable for bachelors student in the third year, who attended introduction to graph theory	-	-
to mathematically	looking for research topics.		J Sludenis

NI-MTI	Modern Internet Technologies	Z,ZK	5
SYNOPSIS The s	ubject "Modern Internet Technologies" is designed on four major pillars of networking: 1. Unified Communication and Collaboration -	A single network, c	riented on
TCP/IP is able to c	arry whatever types of protocols for whatever purposes. This architecture is able to be protocol independent and carries voice, video	and data to achiev	e seamless
-	. 2. Design of Extremely Scalable Networks - This provides the insights of network architectures which can accommodate hundreds of		
	there is a paradigm switch from LANs (Local Area Networks) to SPs (Service Providers). 3. Traffic Segregation, Traffic Matching and		
-	ow service providers to create private channels of communication between customers, with guaranteed parameters (bandwidth, dela		tocol). 4.
NI-MVI	eration Technologies - They allow traffic to be carried at the optimal speed and allow for graceful degradation of service parameters in		F
	Computational Intelligence Methods		5 (will loorn
Students will unde	erstand methods and techniques of computational intelligence that are mostly nature-inspired, parallel by nature, and applicable to m how these methods work and how to apply them to problems related to data mining, control, intelligen games, optimizations,		y will learn
NI-MZI	Mathematics for data science	Z,ZK	4
	ents are introduced to those fields of mathematics that are necessary for understanding standard methods and algorithms used in data		
	near algebra (matrix factorisations, eigenvalues, diagonalization), continuous optimisation (optimisation with constraints, duality princ		
,	selected notions from probability theory and statistics.	1 - , 3	,
NI-NMU	New media in art and design	ZK	3
The course introd	luces students to the issue of using new media in artistic and design work. Key topics are moving image, internet, computer game an	d sound. The main	goal is to
familiarize the stud	lent with the largest possible range of creative approaches in new media. The subject emphasizes dialogue with students, especially	in lectures devoted	to specific
	art projects.		
NI-NON	Nonlinear Continuous Optimization and Numerical Methods	Z,ZK	5
	roduced to nonlinear continuous optimization, principles of the most popular methods of optimization and applications of such method		-
	inite element method and the finite difference method used for solving ordinary and partial differential equations in engineering. They		-
linear algebraic ec	juations that arise from discretization of the continuous problems by direct and iterative algorithms. They will also learn to implement	these algorithms so	equentially
NI-NSS	as well as in parallel.	ZK	5
	Normalized Software Systems the foundations of normalized systems theory that studies the evolvability of modular structures based on concepts from engineering		-
	from thermodynamics. Students will understand a set of principles that indicate where violations of stability and entropy-related issue	· ·	
	second part of the course, students learn how to construct software architectures using a set of 5 design patterns called elements. The		
	mation systems in terms of storing data, executing actions, workflows, connectors, and triggers, while handling violations of the stability	-	
	This knowledge allows students to realize new levels of evolvability in software architectures.		
NI-NUR	User Interface Design	Z,ZK	5
Students will under	stand the theorical background of human-computer interaction and user interface (UI) design, will learn formal description of UIs, forma	user models, the f	undamental
	ocesures. They get acquainted with graphical, speech, and multimodal UIs. Thanks to the gained knowledge, the students will be able	e to design advance	ed Uls.
NI-OLI	Linux Drivers	Z,ZK	4
	g system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining po	-	
	ability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development		ents. The
	urse provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practice		
NI-OSY	Operating Systems and Systems Programming	Z,ZK	5
	system programming in UNIX environment. Emphasis is given on kernel development with focus on kernel architecture and kernel d ment, memory management, file operations and architecture of modern file systems, device drivers and network programming. The c		
	ss, upgrades of existing kernels, kernel booting, debugging using dynamic instrumentation, and techniques to guarantee portability.		
	eal-time operating systems are also discussed. Theoretical and general principles are demonstrated on the LINUX kernel. Within labs.	-	
	focused on development of LINUX kernel modules.		
NI-PAM	Efficient Preprocessing and Parameterized Algorithms	Z,ZK	4
There are many o	pptimization problems for which no polynomial time algorithms are known (e.g. NP-complete problems). Despite that it is often necess		problems
exactly in practice.	We will demonstrate that many problems can be solved much more effectively than by naively trying all possible solutions. Often one	e can find a commo	on property
	nputs from practice-e.g., all solutions are relatively small. Parameterized algorithms exploit that by limiting the time complexity expone		
	the input size (which can be huge). Parameterized algorithms also represent a way to formalize the notion of effective polynomial tir		
	sible in the classical complexity. Such a polynomial time preprocessing is then a suitable first step, whatever is the subsequent solution eterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pro-		
	eterized algorithm design methods and we will also show how to prove that for some problem (and parameter) such an algorithm (pro will also not miss out the relations to other approaches to hard problems such as moderately exponential algorithms or approximation		I GAISL VVE
NI-PAS	Advanced Aspects of Business	Z,ZK	4
	burse is to provide students with advanced (compared to the bachelor's degree) knowledge and skills needed to establish and run the	I ' I	
	management, especially in law, administration (necessary steps and documents), business economics, foreign trade and related		

NI-PDB Advanced Database Systems	Z,ZK	5
Students orient themselves in problems of evaluation and optimization of SQL queries. The next part of the course deals with new concepts of databas		
databases), with the related new data models (XML, graph databases, column databases) and languages for working with them (XQuery, XPath, CYPH the course deals with performance evaluation of database machines.	IER, Gremlin). The	last part of
NI-PDD Data Preprocessing	Z,ZK	5
Students learn to prepare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data s		-
time series, etc., and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteris	tics from images or	from web
NI-PDP Parallel and Distributed Programming	Z,ZK	6
21st century in computer architectures is primarily influenced by the shift of the Moore's law into parallelization of CPUs at the level of computing core:		-
are becoming a ubiquitous commodity and parallel programming becomes the basic paradigm of development of efficient applications for these platfor		
with architectures of parallel and distributed computing systems, their models, theory of interconnection networks and collective communication ope	rations, and langua	ges and
environments for parallel programming of shared and distributed memory computers. They get acquianted with fundamental parallel algorithms and or	-	-
learn the techniques of design of efficient and scalable parallel algorithms and methods of performance evaluation of their implementations. The course	includes a semeste	er project of
practical programming in OpenMP and MPI for solving a particular nontrivial problem.		
NI-PG1 Computer Grafics 1	ZK	4
The course builds on graphic courses (mainly BI-PGA and BI-PGR) and the knowledge from these courses is deepened by state-of-the-art knowledge. The interested in advanced computer graphics. Students will gain practical knowledge with realistic texturing and raytracing methods. An integral part of the	-	
articles and their subsequent implementation. The course will be followed by a course PG2 supplementing the knowledge of PG1 on other areas and		
NI-PIS Enterprise Information Systems	Z,ZK	5
The course is focused on the current IT requirements of large companies in the Czech Republic (Top 100). The basis is Data management, storage of b		
in BI (Business Intelligence). The principles of solving the overall architecture of information systems in the banking, insurance and telecommunication		
real examples. Furthermore, students will get acquainted with the life cycle of information systems in the company / organization and its impact on the bus	iness strategy of th	e company.
Students will be acquainted with technologies that have proven themselves in the elimination of basic risks in the planning, implementation and operation	n of information sys	tems in the
company / organization.		
NI-PON Selected Topics in Optimization and Numerical mathematics	Z,ZK	5
The course focuses on optimization problems that appear in the field of machine learning and artificial intelligence. Students broaden their knowledge of co in the course Mathematics for informatics. The methods are explained and described along with the details on how they are implemented on computers		
of numerical matematics, mainly numerical linear algebra, are explained too.	. Hence, the feleval	ii concepts
NI-PSD Public Services Design	KZ	4
The course will introduce students to specifics of UX, Service design and development for public sector. We will look into the design and development p		
suppliers (devs and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboratio		
Course is aimed at students-designers as well as clients.		
NI-PSL Programming in Scala	Z,ZK	4
The course introduces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language feature	es - e.g.pattern mai	tching and
advance standard library. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and	l libraries e.g. Play,	Cassandra,
Scalaz, etc.		
NI-PVR Advanced Virtual Reality	KZ	4
The course introduces advanced parts of the virtual reality. It is a continuation of the already running graphic objects, especially the creation of 3D mode things, it introduces students to their application in virtual reality. Lectures will focus on virtual reality technology, its use in various applications and will also		°
in available 3D engines (mainly Unity3D). The course is freely connected with the subject VHS (virtual game worlds), students will be able to apply the kr	-	
in virtual reality, or directly create a complex game for VR.		
NI-PVS Advanced embedded systems	Z,ZK	4
The course is focused on ARM processors and microcontrollers and their usage in wide range of applications. The course includes a series of advance	d topics like securi	ty support,
working with mass storage devices, motor control, system control and industrial communication. The students obtain both theoretical and also practical	l experiences with e	embedded
systems.		
NI-PYT Advanced Python	KZ	4
The goal of this course is to learn various advanced techniques and methods in Python. The course indirectly continues where Programming in Python	,	
very hands-on and it has only tutorials, everything is demonstrated on examples. Classification is based on work in class as well as semestral coursework teachers from Red Hat.	. The course is lead	by external
NI-ROZ Pattern Recognition	Z,ZK	5
The aim of the module is to give a systematic account of the major topics in pattern recognition with emphasis on problems and applications of the si		
recognition. Students will learn the fundamental concepts and methods of pattern recognition, including probability models, parameter estimation, a		
NI-RUB Programming in Ruby	KZ	4
This course is presented in Czech.		
NI-RUN Runtime Systems	Z,ZK	5
As the abstraction level of programming languages steadily rises, modern programs require greater and greater support during their runtime. This course	2,21	s to various
aspects of the runtime support, such as runtime-effective program description, memory management support and garbage collection, just-in-time complete support and garbage collection, just-in-time comp	introduces student	
other languages and systems.	introduces student	rability with

its parameters, analyze its properties and use it for forecasting of future or intermediate values. The stress is put on understanding and adoption of the main principles based on practical real-world examples. Both the lab classes and the lectures exploit freely available software packages in order to provide easy and straightforward transfer of students' knowledge from

	the academic to the real world.		neuge nom		
NI-SEP	World Economy and Business	Z,ZK	4		
This course is p	bresented in Czech. However, there is an English variant in the program Informatics (N1801 / 4793). The course introduces students o	f technical univers	ty to the		
	iness. It does that predominantly by comparing individual countries and key regions of world economy. Students get to know about diff				
	g business in diverse societies as well as indexes of economic freedom, corruption and economic development, which are needed for				
	o improve on the knowledge in the form of discussions based on individual readings. It is advised to take bachelor level of this course				
NI-SIB	Network Security	Z,ZK	5		
NI-SIM	Digital Circuit Simulation and Verification	Z,ZK	5		
The aim of the cou	Irse is to acquaint the students with principles of digital circuit simulation at RTL (Register Transfer Level) and TLM (Transaction Level properties of proper tools. The course covers recent verification methods, too.	wodeling) levels a	na with the		
NI-SWE	Semantic Web and Knowledge Graphs	Z,ZK	5		
	learn the most recent concepts and technologies of the Semantic Web. The course will provide an overview of the Semantic Web tech	, ,			
	selling, integration, publishing, querying and consumption of semantic data. The students will also gain skills in creation of knowledge	-			
	quality assurance.				
NI-SYP	Parsing and Compilers	Z,ZK	5		
The module builds	upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of va	rious variants and	applications		
	of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing.				
NI-SZ1	Knowledge Engineering Seminar Master I	Z	4		
	r you will present a research paper from a top institute / research group to your peers. You will learn what is being cooked in top resea				
Additionally, you wi	Il learn how to properly present and read scientific papers. The work in the seminar will prepare you to attend (and profit from) top machin	ie learning and AI o	conterences

NI-TES	Systems Theory	Z,ZK	5		
	Id has the ability to develop systems of incredible complexity (e.g., trains, microprocessors, airplanes, nuclear power plants). However	,			
complexity and of	ensuring the correct behavior of a given system have become critical. A key technique for mastering this complexity is the usage of me	odels that describe	only those		
aspects of the syst	tems that are important for the task at hand, and automated tools for analyzing those models. This subject will present theory and algo	prithms that form th	ne basis for		
	the modeling and analysis of complex systems.				
NI-TKA	Category Theory	Z,ZK	4		
NI-TNN	Theory of Neural Networks	Z,ZK	5		
	study neural networks from the point of view of the theory of function approximation and from the point of view of probability theory. At				
	ial neural Networks, such as neurons and connections between them, types of neurons from the point of view of signal transmission, r s, network training, and the role of time in neural networks. In connection with network topology, we get acquainted with its transforma				
	n with somatic and synaptic mappings, with their composition into mappings computed by the Network, Finally in connection with trair				
	ining and to the fact that training is actually a specific optimization task, recalling the most typical objective functions and the most im				
employed for neura	al network training. We will see the meaninig of all these concepts in the context of common kinds of forward neural networks. Within the	topic approximatio	n approach		
	rks, we first notice the connection of neural networks to expressing functions of many variables using functions of fewer variables (Kol	-			
	ds, we will see how the universal approximation capacity of neural networks can be mathematically formalized as the sets of mappings				
	nportant Banach spaces of functions, in particular in the spaces of continuous functions, spaces of functions integrable with respect to				
	tinuous derivatives, and Sobolev spaces. Within the topic probabilistic approach, we first get acquainted with training based on expect Ind with probabilistic assumptions about training data with which those two kinds of neural networks can be employed. We will see how it	-			
-	al expectancy of network outputs conditioned by its inputs using the expectancy based learning. We recall the strong and the weak law	-			
	in analogy of the strong law of large numbers for neural networks and with the assumptions for its validity. Finally, we recall the central	-	-		
with its analogy	for neural networks, with the assumptions for its validity and with the hypothesis tests based on it. We will see how those tests can be	employed to search	ch for the		
	topology of the network.

NI-TSP Students will gain	Testing and Reliability	Z,ZK	5 the help of		
-	knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prep ensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with bui				
will be able to compute, analyze, and control the reliability and availability of the designed circuits.					
NI-TSW	Software Product Development	KZ	4		
	The course is presented in Czech.		-		

NI-TVR	Virtual Reality Technology	Z,ZK	3			
Students will be in	troduced to the basic concepts of virtual reality. Techniques for displaying virtual worlds (CAVE, HMD,) and the possibilities of contra	olling virtual avata	rs (position			
tracking, hand tracking, eye tracking) will be discussed. Furthermore, the concepts of mixed and augmented reality will be introduced. Finally, ways of using virtual and augmented						
	reality will be presented.					
NI-UMI	Artificial intelligence	Z,ZK	5			
The course cover	s search and inference algorithms in major formal paradigms used in artificial intelligence such as logic theories, constraint programmed	ning and automated	d planning.			
	The main principles and practical applications of discussed techniques will be illustrated.					
NI-VCC	Virtualization and Cloud Computing	Z,ZK	5			
-	in knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and	-				
	irtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficie		-			
	arameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effecti mplex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills ir		-			
Inanagement of co	and development tools (Continuous integration and development).	The use of model	rintegration			
NI-VMM	Retrieval from Multimedia	Z,ZK	5			
	s general knowledge regarding interfaces of portals providing multimedia content, the principles of similarity search, the methods of feat					
	objects, indexing, and structure of distributed search engines.					
NI-VOL	Elections	Z,ZK	5			
	We will cover the basics of (committee) elections and, in general, opinion aggregation.	_,	Ũ			
NI-VPR	Research Project	Z	5			
	Student obtains the credits for published scientific outputs. The details are at https://courses.fit.cvut.cz/NI-VPR/en.	- 1	Ũ			
NI-VSM	Selected statistical Methods	Z,ZK	7			
	the student through advanced probabilistic and statistical methods used in information technology praxis. Particularly it deals with mu		istribution,			
	tropy in coding theory, hypothesis testing (T-tests, goodness of fit tests, independence test). Second part of the course deals with rand					
	Markov chains. The high point of the course is the Queuing theory and its application in networks.					
NI-VYC	Computability	Z,ZK	4			
	Classical theory of recursive functions and effective computability.					
NI-ZS10	Master internship abroad for 10 credits	Z	10			
Each student can	once within his / her master's degree have a foreign internship at a foreign university or other foreign scientific and/or research institu	tion. Before the inte	ernship the
