#### Recomended pass through the study plan

## Name of the pass: Optics and Optometry 21/22, 22/23, 23/24, 24/25

Faculty/Institute/Others:

Department:

Pass through the study plan: Optics and Optometry

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch:

Program of study: Optics and Optometry

Type of study: Bachelor full-time

Note on the pass: Informaci o p edepsaném minimálním po tu PV p edm t pro konkrétní jednotlivé semestry

najdete v odpovídajícím studijmín plánu programu.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

#### Number of semester: 1

Code	Name of the course / Name of the group of courses (in case of groups of courses the list of codes of their members) Tutors, authors and guarantors (gar.)	Completion	Credits	Scope	Semester	Role
F7PBOAF1	Human Anatomy and Physiology I.  Jakub Tlapák <b>Jakub Tlapák</b> Jakub Tlapák (Gar.)	Z,ZK	4	2P+2C	Z	Z

17BOZP	Occupational Safety and Health, Fire Protection and First Aid	Z	0

======			
F7PBOAF1	Human Anatomy and Physiology I.	Z,ZK	4
	y part of studying is to gain an overview of the structure and composition of the human body. The aim of Physiology part of studying is		- 1
_	ed on the description of a cell and the exchange of chemicals, energy and information with the environment. Entry requirements of the		- 1
	competences: The course serves to understand the relationships between the structure and functions of the human body. The teaching a direct expression between the provided at the topics of expression between the provided at the topics of expressions and the functions of the human body.	-	
_	in a direct connection between the morphology and the functions of organ systems. Seminar teaching is closely linked to the topics of is. It focuses significantly on problems of program and uses activation methodologies to increase student motivation. The use of mode		
•	ers) is a matter of course. From a theoretical and practical point of view, the main emphasis will be on the morphology and function of	•	• • •
F7PBOAF2	Human Anatomy and Physiology II.	Z,ZK	4
	nology: definition, goals, history, disease, symptoms. Etiology and pathogenesis of the diseases at the organ, tissue, cellular and mole	,	
•	gin and development. Pathogenic stimuli. Wound healing. Inflammation as a defensive and autoaggressive phenomenon. Circulatory		
	Tumors. Specific features of pathological changes of the central nervous system, eye, optical pathways.	, , , , , , , , ,	,
F7PBOAFPO	Anatomy, Physiology and General and Special Pathology of Eye	ZK	2
	nistory, diseases, symptomatology. Etiology and pathogenesis of a disease on a tissular, cellular and molecular level. External factors	of the origin and o	development
of the disease. Path	nogenic impulses. Wound healing. Inflammation as a defensive and autoaggressive phenomenon. Circulatory disorders, atrophy, necro	sis. Tumours. Spe	cific features
	of pathological changes in the central nervous system, visual pathway and eye itself.		
F7PBOATO	Professional English Terminology for Opticians and Optometrists	Z	2
	The aim of this course is to improve and broaden communication skills and professional vocabulary and communication with the		
F7PBOBCH	Biochemistry for Optometrists	Z,ZK	2
	d at providing students with the basic knowledge of biochemistry, the structure and properties of biochemically important substances to		, , ,
	of metabolic and energy transformations in organisms. Emphasis is placed on understanding the importance of these substances to the	-	- 1
the knowledge gair	ned to the wider context. During the lectures, students will get to know the basics of biochemistry of organ systems and some importar paid to the biochemistry of vision.	it patriologies Atte	ention is also
F7PBOBLG	Biology for Optometrists	Z,ZK	4
	tudent will gain clear knowledge of general and cell biology, through the formation of cells and organelles (endosymbiotic theory) and		
	inic and organic substances, carbohydrates, fats, amino acids, biopolymers - NK and proteins), construction of non-cellular forms (esp		
prokaryotic (bacte	eria) and eukaryotic (plant, animal and fungal cells), they will also get acquainted with cell metabolism (anabolism and catabolism), gi	rowth and cell diffe	erentiation,
division (cell cycle	and its regulatory mechanisms) to after extinction by apoptosis and necrosis. They will get acquainted with the basics of microbiology	y (viral and bacteri	ial diseases
of man) and applica	tions in technical and medical fields. He will gain detailed knowledge about the internal structure of the eukaryotic cell, its endomembrane	e system and semi	autonomous
	processes that take place in them. Following in the field of molecular biology, they will get acquainted with the basic processes that are ne		
_	on, the processes of replication, transcription, translation (ie proteosynthesis) and gene expression, the genetic code. In general genetics	_	
	assing genetic information from parents to offspring according to Mendel's and Morgan's laws, changing genetic information in the forn ell. Human genetics (clinical genetics) includes basic examination methods and human genetic diseases (autosomal dominant, reces		-
=	ondrial and others). Following the great development of molecular biology and biochemistry techniques, the student is acquainted with	=	
	cally modified organisms and their preparation, as well as tissue cultures and biotechnologies. Applied biology in technical and medic		Ŭ
_	s and mechanisms in modern technology and medicine. The conclusion consists of issues related to the field of animal cells and tissues		
	of biocompatibility.

(endothelial) microscope, devices for subjective investigation of astigmatism, devices for investigation of ocular movements, corneal topohraphs, testing of refractive balance, eikonometer, POLA-test, ortopic machines, Hertel exophthalmometer, devices for color vision testing. F7PBOOGB Geometric and Opthalmic Optics Z.ZK 5 This course focuses on basics of geometrical optics and its applications in the field of optical design of simple optical elements and systems (lenses, mirrors, prisms, telescopes, etc.). The second part of the course deals with a description and analysis of a human eye as an optical imaging system. The design and analysis of various types of spectacle lenses for correction of refraction errors is presented. F7PBOOK1 Z,ZK Opthalmology - Pathology, Clinic I. The course focuses on the basic symptoms of diseases of the eye and its surroundings, the individual parts of the eye and the ocular adnexa are gradually discussed, and a large number of slides are used to instruct students on the clinical examination of individual pathologies and their basic characteristics. Interpretation links students to the integration of anatomy, pathological anatomy and physiology with the fundamentals of effective pharmacotherapy. The teaching follows modern trends in the diagnosis and treatment of pathological conditions and is supplemented by video presentations of interesting cases. Interesting case studies from clinical practice are also demonstrated. Theoretical teaching is closely linked to the topics of lectures and connected with practical exercises aimed at acquiring skills in investigation. With the help of quizzes, students can continuously check their knowledge and ability to remember the lectured material. In terms of theory and practice, the main emphasis is on the student's ability to acquire the most important knowledge that they will be able to use in practical life in their future profession. Part of the training course is a full-day practical block, which students complete in ON KLADNO under the direct supervision of an ophthalmologist. F7PBOOK2 Opthalmology - Patology, Clinic II. Z,ZK 3 The course focuses on basic retinal diseases, their conservative and surgical treatment, general diseases and their influence on the eye, congenital eye defects, eye diseases of childhood, neuro-ophthalmology and traumatology in ophthalmology. Instruction links students to the integration of anatomy, pathological anatomy and physiology with the fundamentals of effective pharmacotherapy. The teaching follows modern trends in the diagnosis and treatment of pathological conditions, and is supplemented by video presentations of interesting cases and demonstrations of interesting case reports from clinical practice. Theoretical teaching is closely linked to the topics of the lectures and connected with practical exercises aimed at acquiring knowledge and skills in practical investigation of a given pathology of the eye. Using quizzes, students can continuously check their knowledge and ability to remember the lectured material. In terms of theory and practice, the main emphasis is on the student's ability to acquire the most important knowledge that they will be able to use in practical life in their future profession as an optometrist. Exercises at the FBMI CTU will be followed by a tour of the departments of the Eye Clinic JL, where they participate in the operation at the patient's bedside and directly in the operating room. They will participate in cataract surgery procedures using modern technologies such as virtual navigation system and femtosecond laser. They will also be able to test their knowledge using a 3D virtual reality studio designed for ophthalmology training. They will have a guided tour of the MRI department. The students also participate in practical blocks at ophthalmology clinical departments (Ophthalmology Department of Kladno Hospital, Ophthalmology Clinic of the 1st Faculty of Medicine of the Charles University in Prague and Ophthalmology Department of Kolín Hospital), where they get acquainted with the organization of operation, instrumentation, participate in the examination of patients under the guidance of ophthalmologists in general and specialized departments such as retinal or glaucoma outpatient clinics. By completing the course, students gain a broad theoretical and practical overview of the problems and diagnosis of eye diseases, including their treatment or surgical intervention. F7PBOOP1 Optical Laboratory I. Practical course where students will learn the basics of spectacle lens and frames applications with respect to refractive status of the eye and practical needs of a customer. They will also practice the technology (cutting, grinding, edging, polishing) of spectacle lenses processing, centering the lens, bevelling the lens into frames and adjusting the spectacle frames. The course makes possible to apply theoretical knowledge from opthalmic optics in practice. F7PBOOP2 ΚZ Optical Laboratory II. 2 Practical course where students will learn the fundamental methods for practical dispensing of individual spectacle lenses. Students will practice the methods for measuring individual parameters of a client and of individual spectacle lenses processing. Dispensing progressive and degressive spectacle lenses. The course makes possible to apply theoretical knowledge from opthalmic optics in practice. Z.ZK F7PBOOPAT Optical Aids and Assistive Technologies for the Visually Impaired 2 F7PBOOVP ΚZ Optometry in Practice 2 F7PBOP1 Professional Training I. 4 The aim of the course is to use the theoretical and practical knowledge acquired in lectures and exercises in real practice conditions. During classes, under the professional guidance of mentors (guaranteed by contract), the student gradually learns the correct procedures and adapts to work in the chosen field. Topics for professional practice are the sale, repair and adjustment of glasses, the grinding of spectacle lenses and the determination of objective and subjective refraction. F7PBOP2 Professional Training II. Ζ 20 **OPT Project** 5 The aim of the course is methodical guidance of students in scientific research or development activities in the field of Optics, Optometry or Ophthalmology. Control of continuous activity on the topic of the project, which will lead to the final Bachelor's Thesis (BP). The secondary objective of the course is to guide students in the systematic activity of documenting the solution of the assigned task, applying the practices of the field to the tasks or projects solved by the students, as well as deepening the communication skills of the students. Last but not least, deepening the knowledge of typographic rules, including proofreading marks, etc. F7PBOPP ΚZ First Aid 2 The course gives a brief overview of the main principles and procedures of providing emergency first aid with special attention to the procedures for failure of basic vital functions and life threatening situations. The subject also includes situations of mass casualty of victims in crisis situations and emergencies, including the phenomenon of CBRN. Programming Tools and Fundamentals of Data Processing The course is focused on the practical mastery of such software tools, which the student will use not only during their studies, but especially will use these tools and instruments in practice. The course aims to get acquainted with modern software and focuses on office applications, processing and visualization of experimental data and graphic presentation. Selected topics of the course are aligned with the syllabus of the internationally recognized concept of testing computer knowledge and skills ECDL (European Computer Driving License). Psychology and Communication F7PBOPSO K7 2 During the lectures, students will be acquainted with the problems of psychology of patients, with mental states in diagnostic - therapeutic activities, in providing psychological assistance to patients during treatment and in coping with chronic states of the disease. Students are provided with theoretical knowledge of basic psychological procedures in communication with patients with various types and degrees of damage to health, instructions on how to manage difficult situations in care about the individual needs of the sick, disabled and dying. and also emphasizes the importance of caring for the mental state of health professionals. F7PBOPTDK ΚZ Prospective Technologies for Diagnostics and Vision Correction Principles, present and future applications of modern methods for diagnostics of a human eye and correction of aberrations of an eye. Techniques of measurement of aberrations and geometric parameters of the eye, analysis of an influence of aberrations on vision and possibilities to apply these factors into the design of ophthalmic correction tools. Analysis of an influence of the cornea on optical properties and aberrations of an eye, possibilities of anterior segment analysis and its application for the correction of the eye. Trends in the development of ophthalmic corrective tools, methods and instruments for a superior diagnostics and analysis of properties of the eye. F7PBOPVZ K7 Sales Skills and Employee Management 2 F7PBOPZP

Education and training - integration. Social and legal problems. Psychological care for persons with visual impairment. Organizations of seriously vision handicapped people. In relation to the organisational systems, they will also learn about the principles of health care financing, both preventive and curative, not only in the Czech Republic and the EU, but also in the world as the principles of health care financing.
optics using selected numerical problems. Emphasis is placed on getting acquainted with the content and basic concepts of further study.  F7PBOVKM Selected Chapters from Mathematics for Optometrists Z,ZK 4  The course summarizes and systematizes the secondary school curriculum and builds on them. Students will get acquainted with the basics of linear algebra, differential and integral calculus of real functions of one real variable in applications. Emphasis is placed on the requirements of further study - solving equations of various types and their systems, modification of trigonometric expressions and geometry of conic sections and the mutual position of the sphere and the plane.  F7PBOVLZ Fundamentals of Public Health Care and Legislation in Health Care

Application of Act No. 258/2000 Coll. in relation to supervision. Supervision of the provisions of the Labour Code, particularly in the area of occupational health and safety preventic
The procedure and methods of decision-making of supervisory bodies in the event of breaches of generally applicable regulations, including internal management acts relating to hea
protection. Interpretation of labour law relations between the employee and the employer, rights and obligations. Legal responsibilities in the health sector.
F7PBOVZF Diagnostic of Visual Functions KZ 2
The course focuses on the examination of the visual functions of the eye. It explains the importance of individual examinations and their physiological nature. It also explains their
changes in various ocular abnormalities. Great emphasis is placed on the practical mastery and understanding of each examination.
F7PBOZFO Foundations of Physiological Optics ZK 2
Fundamentals of optical imaging. Physiological structure of human eye, its geometric and physical properties. Visual perception. Sensitivity of eye. Optical system of human eye. Ax
and pupils of eye. Schematic optical models of human eye. Photometric parameters of optical system of eye. Accommodation and aging of eye. Monochromatic and chromatic aberratio
of human eye. Resolving power and depth of field. Influence of aberrations on image quality. Contrast sensitivity. Ametropy. Astigmatism. Aphakia. Amblyopy. Physiology of eye
movement, methods of eye tracking. Basic principles of binocular and stereoscopic vision.
F7PBOZPE Fundamentals of Pedagogy and Education KZ 2
Education as a scientific discipline, basic educational categories and their interrelationships. After completing the lessons, the student should understand the methods of general are
special education.
F7PBOZSM Fundamentals of Statistics and Measurement Processing KZ 3
