Recomended pass through the study plan

Name of the pass: Bachelor specialization Information Security, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor specialization Information Security, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the	course corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement	students are due	to: -Take ar
active part in the la	anguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both th	e midterm and the	e final term
tests with the succe	ess rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by indi class of the term.	vidual teachers du	ring the firs
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introdu	uced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite a	utomata, regular e	expressions
and regular gramma	ars, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the	hierarchy of forma	al language
and the	by understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5
'	This course is presented in Czech.		'
BI-ACM2	Programming Practices 2	KZ	5
ı	This course is presented in Czech.	l	!
BI-ACM3	Programming Practices 3	KZ	5
ı	This course is presented in Czech.	l.	'
BI-ACM4	Programming Practices 4	KZ	5
'	This course is presented in Czech.		'
BI-ADU.21	Unix Administration	Z,ZK	5
Students will learn th	he internal structure of the UNIX operating system, with the administration of its basic subsystems and with the security principles. They		difference
between user and a	administrator roles. They will get theoretical and practical knowledge of user management and administration, of users access rights,	file systems, disk s	subsystems
processes, memo	ry, network services and remote access, and in the areas of system deployment and virtualization. In the labs, they will verify the known	owledge from the l	ectures on
	specific examples from practice.		
BI-ADW.1	Windows Administration	Z,ZK	4
·	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).	•	
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
The course cover	s the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing cur	riculum. It links an	d partially
•	ledge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the	•	mplexity of
algor	rithms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asymptotic mathematics in the particular mathem	ptotic notation.	
BI-ALO	Algebra and Logic	Z,ZK	4
	The course extends and deepens the study of topics touched upon in the basic course in logic.	•	

	Programming for the Android Operating System This course is presented in Czech.	KZ	4
BI-ANG	English Language, Internal Certificate Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-ANt	ZK	2
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-ANGK	English language, contact preparation for the B2 level exam	Z	2
The content of the c	ourse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement -	students are due	e to: -Take an
	nguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both th is rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by indir

ı	This course is presented in Czech.	, ,	
BIE-CSI	Introduction to Computer Science	Z	2
This is an introductory of	ass on Elementary Computer Science for broad audiences: bachelor students in computer science, students majoring in other fie	elds but interested	in compute
science, high-school s	udents, anybody with a background in basic math and the desire to understand the absolute basics of computer science. The go	al of the class is to	o introduce
	les of computer science for students to understand, early on, what computer science is, why things such as high-level programm		
	and even how, on a basic yet representative and practically relevant level. After taking the class, students are able to answer not	-	
questions but also ques	tions about themselves such as which courses to take next and which books to follow up with, ideally realizing if they are interes:	ted in computer so	ience more
DIE EEC	than expected, or even less than before.	7	4

Course focuses on stat	This course is presented in Czoch		
Course focuses on stat data processing frame	This course is presented in Czech.	フフレ	
Course focuses on stat data processing frame NI-DSP	Digital Image Processing	Z,ZK	4
Course focuses on state data processing frame NI-DSP NI-DZO This course presents a	·	orithms that are bo	oth easy to

frequency domain, abstraction, hybrid images, gradient domain editing, seamless image stitching and cloning, digital photo-montage, color-to-gray conversion, context enhancement, interactive as-rigid-as-possible image deformation, free-form image registration, texture synthesis, interactive segmentation, colorization, painting, adding depth, alpha matting. NI-IAM Z,ZK Internet and Multimedia The NI-IAM course is focused on principles and modern technologies for network transmissions of audiovisual (AV) signals. The syllabus includes acquisition of AV signals (input), presentation of AV signals (output), network communication protocols, device interfaces, codecs, data formats and stereoscopy. We will look at practical use case scenarios of real-time audiovisual transmissions. Within the labs, students will practically assemble AV transmission chains using HW and SW technologies and verify the effect of various components on the quality and latency of AV transmissions. Students will learn how to build Internet infrastructure for end-to-end AV transmissions from the recording the scene up to the presentation for audience. NI-LSM Statistical Modelling Lab ΚZ The subject is oriented on a single and multi-target tracking. The student both learns the existing methods and tries to implement them. The stress is put on the effective use of the available information and its modeling using numpy and scipy. The second half of the semester is focused on the design of methods and algorithms, and analyses of their properties. At this point, the subject is on the border of own research and may result in the topic of final work (diploma or bachelor thesis). Modern Object-Oriented Programming in Pharo NI-MOP Object-oriented programming is currently one of the most widespread paradigms of software creation, especially enterprise information systems, where its ability to natural abstraction is used to build complex modern applications. In this course, we build on the knowledge acquired in the course BI-OOP and aim to further deepen the skills of design and implementation of object systems in modern pure object system Pharo (https://pharo.org). The course focuses on individual approach to students, their development needs and areas of interest. In addition to deepening object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work on interesting projects and OO technologies in terms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involvement in the Pharo Consortium. NI-MPL Managerial Psychology ZK 2 NI-MSI Mathematical Structures in Computer Science Z,ZK 4 Mathematical semantics of programming languages. Data types as continuous lattices, Scott topology. Procedures as continuous mappings. The Scott model of lambda calculus. Introduction to category theory. Linux Drivers The Linux operating system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining powerful processors and FPGAs increase the variability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development for master's students. The course provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical experience. NI-PDD **Data Preprocessing** Students learn to prepare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data sources, such as images, texts, time series, etc., and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteristics from images or from web pages. NI-PSD Public Services Design The course will introduce students to specifics of UX, Service design and development for public sector. We will look into the design and development process from the perspective of suppliers (devs and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration with client representatives. Course is aimed at students-designers as well as clients. NI-PSL Programming in Scala Z,ZK 4 The course introduces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language features - e.g.pattern matching and advance standard library. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and libraries e.g. Play, Cassandra, Scalaz, etc. NI-REV Reverse Engineering Students will get acquainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before and after the main function is called. Students will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated to reverse engineering of applications written in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be dedicated to debuggers: how debuggers and debugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer malware scene. The focus of the course is on the seminars, where students will solve practically oriented tasks from the real world. Z,ZK NI-SYP Parsing and Compilers 5 The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of various variants and applications of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. NI-TSP Testing and Reliability Z.ZK Students will gain knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prepare a test set with the help of the intuitive path sensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with built-in-self-test equipment. They will be able to compute, analyze, and control the reliability and availability of the designed circuits. NI-VCC Virtualization and Cloud Computing Z,ZK Students will gain knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and organizations. They will get acquainted with virtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficiently operate and optimize the performance parameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effective technology today for the management of complex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in the use of modern integration and development tools (Continuous integration and development). NI-VYC Computability Z,ZK 4 Classical theory of recursive functions and effective computability.
