Recomended pass through the study plan

Name of the pass: Bachelor specialization Computer Graphics, in Czech, 2021

Faculty/Institute/Others:

Department:

Pass through the study plan: Bachelor specialization Computer Graphics, in Czech, 2021

Branch of study guranteed by the department: Welcome page

Guarantor of the study branch: Program of study: Informatika Type of study: Bachelor full-time

Note on the pass: Vedle ist volitelných p edm t si m žete zapsat jako volitelné p edm ty i povinné p edm ty sousedních specializací. Chcete-li splnit skupinu "BI-ZKA.21 Zkouška z angli tiny 2021" p edložením certifikátu, který prokazuje vaši znalost angli tiny srovnatelnou nebo p evyšující úrove B2 Spole ného evropského referen ního rámce pro jazyky, m žete tak u init v kterémkoliv aktivním semestru b hem studia.

Coding of roles of courses and groups of courses:

P - compulsory courses of the program, PO - compulsory courses of the branch, Z - compulsory courses, S - compulsory elective courses, PV - compulsory elective courses, F - elective specialized courses, V - elective courses, T - physical training courses

Coding of ways of completion of courses (KZ/Z/ZK) and coding of semesters (Z/L):

KZ - graded assesment, Z - assesment, ZK - examination, L - summer semester, Z - winter semester

Number of semester: 1

List of courses of this pass:

Code	Name of the course	Completion	Credits
BI-3DT.1	3D Printing	KZ	4
BI-A2L	English language, preparation for the B2 level exam	Z	2
The content of the co	ourse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement	- students are due	to: -Take an
active part in the la	nguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both	the midterm and the	e final term
tests with the succes	ss rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by inc class of the term.	dividual teachers du	ring the first
BI-AAG.21	Automata and Grammars	Z,ZK	5
Students are introdu	ced to basic theoretical and implementation principles of the following topics: construction, use and mutual transformations of finite	automata, regular e	expressions,
and regular gramma	rs, context-free grammars, construction and use of pushdown automata, and translation grammars and transducers. They know the	e hierarchy of forma	al languages
and they	understand the relationships between formal languages and automata. They are introduced to the Turing machine and complexity	classes P and NP.	
BI-ACM	Programming Practices 1	KZ	5
•	This course is presented in Czech.	·	
BI-ACM2	Programming Practices 2	KZ	5
	This course is presented in Czech.		'
BI-ACM3	Programming Practices 3	KZ	5
	This course is presented in Czech.		
BI-ACM4	Programming Practices 4	KZ	5
	This course is presented in Czech.		
BI-ADW.1	Windows Administration	Z,ZK	4
	This course is presented in Czech. However, there is an English variant in the program Informatics (B1801 / 4753).		
BI-AG1.21	Algorithms and Graphs 1	Z,ZK	5
	the basics of efficient algorithm design, data structures, and graph theory, belonging to the core knowledge of every computing computin		
•	edge from the course BI-DML.21, in which students acquire the knowledge and skills in combinatorics necessary for evaluating the	•	mplexity of
	thms. The course also follows up knowledge from BI-MA1.21, the practical usage of asymptotic mathematics, in particular, the asy	· ·	
BI-ALO	Algebra and Logic	Z,ZK	4
	The course extends and deepens the study of topics touched upon in the basic course in logic.		1
BI-AND.21	Programming for the Android Operating System	KZ	4
	This course is presented in Czech.		1
BI-ANG	English Language, Internal Certificate	ZK	2
	Course information and teaching materials can be found at https://moodle-vyuka.cvut.cz/course/search.php?search=BI-Al		ı
BI-ANG1	English Language Examination without Preparatory Courses	Z,ZK	2
BI-ANGK	English language, contact preparation for the B2 level exam	Z	2
	ourse corresponds to the preparation for the English exam at the B2 level. Requirements for course credit. Academic Achievement		
•	nguage instructionMeet the requirements for writing assignments - Summary, Abstract, Argumentation PaperSucceed in both		
tests with the succes	ss rate set at 70%80% and over in BOTH tests means ORAL EXAM ONLY (no written part). Requirements will be specified by inc	dividual teachers du	ring the first
DLADI		7.71/	4
BI-APJ	Aplication Programming in Java This course is presented in Czech. Advanced technologies in Java.	Z,ZK	4
BI-ARD	Interactive applications on Arduino	KZ	4
The subject is design	ned for students of first grade of bachelor study as introduction to embedded systems. Students will learn how to design simple applica-	ations for modern pr	ogrammable
	ied peripherals with help of available libraries. The goal of the subject is to show varied software approaches to control embedded	•	
not only on display	of a PC. Thanks to possible control on higher (objective) layer, this platform is frequently used for artist performance and therefore	e is suitable even fo	r Web and
	Software Engineering students.		

BI-AVI.21	Algorithms visually	Z,ZK	4
	ments other algorithm courses at FIT. It brings knowledge about particular important algorithms from different fields of the computer scient in RIAC4 and RIAC5. A wide scene of equated subject to made accepted due to unique placetime by Algorithms Fix Algorithms (a way) algorithms are RIAC5.		
knowledge presente	ed in BI-AG1 and BI-AG2. A wide scope of covered subject is made possible due to using visualization bz Algovision (www.algovision.org< that make understanding the principles of algorithms easy.	"mtp.//www.aigovis	olon.org>,)
BI-BAP.21	Bachelor Thesis	Z	14
BI-BLE	Blender	Z,ZK	4
	ds knowledge of opensource program Blender from BI-MGA (Multimedia and Graphics Applications) course. It is intended for those in		phics and
	ffers a complete and practically oriented introduction to Blender environment. Students may continue to BI-PGA (Programming graph	ics applications) c	
BI-BPR.21	Bachelor project	Z	1
=	g of the semester, the student reserves the topic of the bachelor's thesis and connects with the supervisor. He / she will arrange the p semester to process the assignment. If he completes these tasks, the supervisor will award him a credit from the subject BI-BPR at the		
-	enters the information on granting the credit using the form "Granting credit from the external supervisor of the final thesis" (http://fit.cvut		
The completed a	nd signed form will be handed over by the student to the head of the Department of Defense, who will record the credit in KOS. 3. If the	ne topic of the wor	k that the
student has reserv	ved is formulated more generally, the tasks assigned to him by the supervisor for the semester should be aimed primarily at fine-tuning	g the assignment	so that the
BI-CCN	assignment can be supplemented and approved at the end of the semester. Compiler Construction	Z.ZK	5
	Compiler Construction	, 1	
	nd the design and implementation of programming languages. Seeing and actually understanding self-compilation is the overarching	•	
BI-CS1	Programming in C#	KZ	4
•	urse is to introduce .NET Framework as a multi-language development platform. Then, programming language C#, its fundamental co		
	s, loops, definitions and calls of functions will be discussed. Attention is focused on the object oriented programming in C# - class defi ods, properties, static members, Garbage Collector, inheritance and polymorphism, collections, delegates, and generics. Debugging		- 1
constructors, metri	well as work with files are emphasized.	and exception pro-	ocooning, ao
BI-CS2	C# language and data access	KZ	4
	and data access course objective is to introduce students several data access technologies - database, XML, NoSQL - on the Micros	•	
-	s used to retrieve data - Connection, Command, Data Reader and DataAdapter v ADO.NET. Next, they will learn to use current techr rying and updating data, integrated directly with the .NET platform languages, which enable LINQ use with Objects, XML and SQL (L	_	
). Another objective is the Entity Framework - an object-relational mapper that enables .NET developers to work with relational data u	•	
	f the course introduces Code First, Database First, Model First approaches. The students will also get to know the Conceptual Model.	•	
	(XML description).		
BI-CS3	Language C# - design of web applications	KZ	4
The students will be	e introduced to current technologies in web application development on the .NET platform.They will acquire a comprehensive overview on thisplatform. They will learn to create WebAPI and to use it by client programs.	t the development	possibilities
BI-DBS.21	Database Systems	Z,ZK	5
	oduced to the database engine architecture and typical user roles. They are briefly introduced to various database models. They learn		_
	constraints) using a conceptual model and implement them in a relational database engine. They get a hands-on experience with the		
	ation - the relational database model. They learn the principles of normalizing a relational database schema. They understand the fundal Iling parallel user access to a single data source, as well as recovering a database engine from a failure. They are briefly introduced t	-	
	ases with respect to speed of access to large quantities of data. This introductory-level course does not cover: Administration of database engine from a failure. They are briefly fill outdoor in		
	optimizing database applications, distributed database systems, data stores.		00 0
BI-DML.21	Discrete Mathematics and Logic	Z,ZK	5
	equainted with the basic concepts of propositional logic and predicate logic and learn to work with their laws. Necessary concepts from		
Special attention is	paid to relations, their general properties, and their types, especially functional relations, equivalences, and partial orders. The course combinatorics and number theory, with emphasis on modular arithmetics.	e also lays down tr	ne basics of
BI-EJA	Enterprise Java	Z,ZK	4
	dvanced technologies in the Java programming language. The focus is on technologies for development of enterprise information sys		nnected to
51.5.17	a database and are accessed through the web interface.		
BI-EJK	Enterprise Java and Kotlin dvanced technologies in the Java and Kotlin programming languages. The focus is on technologies for developing enterprise informati	Z,ZK	4
The course is on a	architecture, that can be deployed to the cloud.	on systems with it	licioseivice
BI-EP1.24	Effective programming 1	KZ	4
	The course is taught in Czech.		
BI-EP2	Efficient Programming 2	KZ	4
Continuation of Ef	ficient Programming 1. Students will practice implementation of algorithms by solving typical problems. Various ways of solving indivic with the aim to choose the best one and avoid implementation errors.	lual problems are	discussed,
BI-FMU	Financial and Management Accounting	Z,ZK	5
	rse is explanation of basic terms in the theory of accounting, the principles of balancing the property amounts and liabilities in the par		
•	unts and accounting statements including opening and closing of bookkeeping. The course provides students with a legal modification		
of economic oper	rations based on current methods of double-entry bookkeeping for enterprising subjects in the Czech Republic. Principles of manager	nent accounting ar	re base of
BI-GIT	Business Inteligence moduls in Business information systems. Version control system GIT	KZ	2
	troduced to basic principles of version control systems. These principles will be then shown on DCVS Git both theoretically and practi	I	
even the i	mplementation details will be shown. Students will be challenged to use Git as users, project managers, team leaders as well as Git s	erver administrato	rs.
BI-GIT.21	SW Development Technologies	Z	3
This course is aime	ed at one of the rudimental team software development technology - version control. To be more specific, we will introduce students to from hell, as Linus Torvalds nicknamed it, and provide a comprehensive guide into its depths, as well as for day-to-day use		on manager
BI-HAM	HW accelerated network traffic monitoring	KZ	4
	duces students to modern and widely used technologies and principles in the area of network infrastructure and traffic monitoring. The	1	
network traffic are	mandatory skills to network operators (planning and development of resources and infrastructure) and security analysts alike (as a security analysts)	ource of informatio	n and data
for analysis). The g	oals of the course are to acquaint students with the modern trends and cornerstone principles in the area of monitoring network traffic	c on a hardware a	nd software
	level and to develop their practical abilities in this field.		

BI-HAS	Human Aspects in Cryptography and Security	Z,ZK	5
his course is for st	tudents interested not only in technical scope of computer science, but also in making products usable - for users and for developers	s. Students of this	course ca
DILIMI	use their gained knowledge to design, plan and analyse their own projects in the context of human-centered security.	Z,ZK	3
BI-HMI	History of Mathematics and Informatics This course is presented in Czech.	Z,ZR) 3
BI-IOS	Fundamentals of iOS Application Development for iPhone and iPad This course is presented in Czech.	KZ	4
BI-KAB.21	Cryptography and Security	Z,ZK	5
	erstand the mathematical foundations of cryptography and gain an overview of current cryptographic algorithms. They will be able to	•	_
	ms based on them and learn the basics of safe use of symmetric and asymmetric cryptographic systems and hash functions in appli		-
will gain prac	ctical skills in using standard cryptographic methods with an emphasis on security and will also get acquainted with the basic procedure.	dures of cryptanaly	/sis.
BI-KOT	Programing in Kotlin	Z,ZK	4
	statically-styled object-functional language that exploits the extensive Java language ecosystem while delivering a number of advangy Java compliant and allows for mixed projects that preserve existing parts written in Java, and continue with the development of a rewith minimum of boiler-plate code. Last but not least, Kotlin is suitable for designing of DSLs (Domain-Specific Languages)	nodern, object-fun	
BI-KSA	Cultural and Social Anthropology	ZK	2
I	ourse aims to acquaint students with the basics of social and cultural anthropology as a scientific discipline dealing with the diversity	of the world - exa	amples fr
nthropological rese	earch from our "exotic" cultures (topics: kinship, religion, social exclusion, migration, globalization, , material culture, language, health	n, history, death, et	tc) will
	shown. The course is presented in Czech.		
BI-LA1.21	Linear Algebra 1	Z,ZK	5
	udents to the basic concepts of linear algebra, such as vectors, matrices, vector spaces. We will define vector spaces over the field		
	ields. We will present the concepts of basis and dimension and learn to solve systems of linear equations using the Gaussian elimina h linear manifolds. We define the regularity of matrices and learn to find their inversions using GEM. We will also learn to find eigenv	•	•
the connection with	matrix. We will also demonstrate some applications of these concepts in computer science.	aldes and eigenve	201013 01 1
BI-LA2.21	Linear Algebra 2	Z,ZK	5

BI-TS3 Theoretical Seminar III Ζ Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. BI-TS4 Ζ Theoretical Seminar IV Theoretical seminar is intended for students which want to come in deeper contact with contemporary theoretical computer science. It is mostly a classical reading group. The students are treated individually and concern themselves with interesting topics from the latest research in the area. Therefore, an integral part of the course is a work with scientific papers and other scholarly literature. The capacity is limited by the the potentials of the teachers of the seminar. BI-TUR.21 User Interface Design Z,ZK Students gain a basic overview of methods for designing and testing common user interfaces. They get experience to solve the problems where software and other products do not communicate with the user optimally, since the needs and characteristics of users are not taken into account during product development. Students gain an overview of methods that bring users into the development process to ensure optimal interface for them. BI-TZP.21 Technological Fundamentals of Computers Students get acquainted with the fundamentals of digital and analog circuits, as well as basic methods of analyzing them. Students learn how computer structures look like at the lowest level. They are introduced to the function of a transistor. They will understand why processors generate heat, why cooling is necessary, and how to reduce the consumption; what the limits to the maximum operating frequency are and how to raise them; why a computer bus needs to be terminated, what happens if it is not; how a computer power supply looks like (in principle). In the labs, students model the behavior of basic electrical circuits in SW Mathematica. BI-ULI 2 Introduction to Linux 7 Students become familiar with the basics of the Linux operating system using e-learning form. They learn to work with the command line and become familiar with basic commands and techniques of a Unix-like system. Topics can be studied first theoretically and then practically verified in a virtual machine (terminal) Unix-like Operating Systems ΚZ Unix-like operating systems represent a large family mostly open-source codes that kept bringing during the history of computers efficient innovative functions of multiuser operating systems for computers and their networks and clusters. The most popular OS today, Android, has a unix kernel. Students get overview of basic properties of this OS family, such as processes and threads, access rights and user identity, filters, or handling files in a file system. They learn to use practically these systems at the level of advanced users who are not only able to utilize powerful system tools that are available to users, but are also able to automatize routine agenda using the unix scripting interface, called shell BI-VAK 21 Selected Applications of Combinatorics The course aims to introduce students in an accessible form to various branches of theoretical computer science and combinatorics. In contrast to the basic courses, we approach the issue from applications to theory. Together, we will first refresh the basic knowledge needed to design and analyze algorithms and introduce some basic data structures. Furthermore, with the active participation of students, we will focus on solving popular and easily formulated problems from various areas of (not only theoretical) informatics. Areas from which we will select problems to be solved will include, for example, graph theory, combinatorial and algorithmic game theory, approximation algorithms, optimization and more. Students will also try to implement solutions to the studied problems with a special focus on the effective use of existing tools. **BI-VHS** Virtual game worlds The course leads students to create a complex virtual world. The course is a continuation of basic graphical courses (MGA, PGR, BLE,...). This current students knowledge is furthermore complemented by the theory of game design, principles of writing dialogues and characters in order to create a functional and complex virtual world. The course can be followed by the course MI-PVR with the task of converting scenes and their dynamics into a fully virtual environment suitable for VR devices BI-VHS.21 Virtual game worlds In the course students learn methods to create a complex virtual world. It is a follow-up course of basic courses of the PG specialization (BIE-MGA, BIE-PGR). Students gain knowledge of the theory of game design, of principles of writing dialogues and characters in order to create a functional virtual world. Within the labs they get practical skills within team development work on the semester project. Selected Mathematical Methods We start reviewing geometric properties of linear spaces with inner product. Next, we introduce and analyze the discrete Fourier transform (DFT) and its fast implementation (FFT). Further we deal with differential calculus of functions involving multiple variables. We present methods for the localization of extreme values of functions. For this purposes, we study normed linear spaces and quadratic forms. In addition, we introduce the least square method. The last part of the course is devoted to optimization and duality. The linear programming and the Simplex method is analyzed in more detail. BI-VR1 Virtual reality I Introduction to Virtual Reality (VR), virtual reality operating system and virtual reality creation. Another objective is to meet the rules and requirements of virtual worlds communication. The course focuses on the ways of teaching using virtual reality technologies and interactive activities in educational virtual 3D worlds. It improves computational thinking, empathy and shared social activities. BI-VR2 Virtual reality II K7 3 Continuation of the course Virtual Reality I. The new course focuses on collaborative telepresence, spatial computing and social life of avatars. The objective is to develop applications for computer science and gamification in various social metaverse and desktop engines. **BI-ZIVS** Intelligent Embedded System Fundamentals ΚZ Intelligent embedded system fundamentals course is focused on high-level technology embedded systems integrating artificial intelligence. The aim of the course is to teach students modern humanoid robot control and development of applications in a graphical development environment. Lectures provide fundamentals of motion control, sensor reading, application interfaces, robot navigation and development tools. In labs, students program a set of basic task by using the robot simulator and real hardware to get practical experience with these technologies **BI-ZNF** PHP Framework Nette - basics ΚZ 3 Students will gain the basics of PHP framework Nette. They will learn how to practically work with MVP architecture and various libraries of this Czech popular framework. The resulting knowledge should serve for the efficient creation of a web backend in PHP language. BI-ZPI Process engineering Students will learn fundamentals of process engineering in this subject. Students will get necessary foundations for understanding formal principles of process modelling and they will learn basics of the used notations (UML, BPMN, BORM). The focus in this subject lies in training of practical skills of formalisation and modelling of business processes using modern CASE tools. The role of process engineering for information systems development is discussed as well as its importance in the overall context of information and business strategy of an enterprise **BI-ZRS** Basics of System Control Z,ZK The course gives an introduction to the field of automatic control. Students will gain knowledge in this rapidly evolving field of great future. We will focus our attention particularly on control of engineering and physical systems. We will provide basic information from the feedback control of linear dynamical SISO systems, description methods of system models, basic linear dynamic systems analysis and design verification, simple PID feedback, PSD, and fuzzy controllers. Students will learn the methods of creating a description of the system model, the basic linear dynamic systems analysis and design verification and simple PID feedback, PSD, and fuzzy controllers. Attention is also given to sensors and actuators in control loops, issues of stability in control systems, single and continuous adjustment of the controller parameters, and certain aspects of the industrial implementation of continuous and digital controllers and PLC control.

addition to deepening object programming skills, which are generally applicable in other OO languages, students will also gain the opportunity to work on interesting projects and OO technologies in terms of semestral work with the possibility of cooperation with practice and related bachelor, diploma, postgraduate our direct involvement in the Pharo Consortium. NI-MPL Managerial Psychology ZK NI-MSI Mathematical Structures in Computer Science Z,ZK Mathematical semantics of programming languages. Data types as continuous lattices, Scott topology. Procedures as continuous mappings. The Scott model of lambda calculus. Introduction to category theory. NI-OLI Z.ZK Linux Drivers The Linux operating system is an important operating system for personal computer and also for embedded systems. Systems on chip and combining powerful processors and FPGAs increase the variability of peripheral subsystems requiring specific software drivers. This course is an advanced course in the Linux driver development for master's students. The course provides knowledge of Linux operating system architecture, principles of development of various types drivers, including practical experience. NI-PDD Data Preprocessing Students learn to prepare raw data for further processing and analysis. They learn what algorithms can be used to extract information from various data sources, such as images, texts, time series, etc., and learn the skills to apply these theoretical concepts to solve specific problems in individual projects - e.g., extraction of characteristics from images or from web NI-PSD Public Services Design ΚZ The course will introduce students to specifics of UX, Service design and development for public sector. We will look into the design and development process from the perspective of suppliers (devs and designesr) as well as clients. In small teams students will work on projects from partner organizations and will try out collaboration with client representatives. Course is aimed at students-designers as well as clients. Programming in Scala The course introduces the modern programming language Scala which exploits object-functional paradigm. Scala comprises advance language features - e.g. pattern matching and advance standard library. Scala enables to use of applications functional patterns e.g. H-List, Monads, etc. Scala is used by many powerful frameworks and libraries e.g. Play, Cassandra, Scalaz, etc. NI-REV Reverse Engineering Students will get acquainted with the essentials of reverse engineering of computer software. They will learn how processes start and what happens before and after the main function is called. Students will understand how executable files are organized and how they interact with 3rd party libraries. Another part of the course is dedicated to reverse engineering of applications written in C++. Students will also understand principles of disassemblers and obfuscation techniques. A part of the course will also be dedicated to debuggers: how debuggers and debugging work and which methods can be used to detect it. One of the lectures will be dedicated to the latest trends on the computer malware scene. The focus of the course is on the seminars, where students will solve practically oriented tasks from the real world. NI-SYP Parsing and Compilers Z,ZK 5 The module builds upon the knowledge of fundamentals of automata theory, formal language and formal translation theories. Students gain knowledge of various variants and applications of LR parsing and are introduced to special applications of parsers, such as incremental and parallel parsing. NI-TSP Testing and Reliability Z.ZK Students will gain knowledge about circuit testing and about methods for increasing reliability and security. They will get practical skills to be able to prepare a test set with the help of the intuitive path sensitization and to use an ATPG for automatic test generation. They will be able to design easily testable circuits and systems with built-in-self-test equipment. They will be able to compute, analyze, and control the reliability and availability of the designed circuits. NI-VCC Virtualization and Cloud Computing Students will gain knowledge of architectures of large computer systems that are used in data centers and computer infrastructure of companies and organizations. They will get acquainted with virtualization principles, tools and technologies that serve to facilitate and automate configuration, testing and monitoring, and to efficiently operate and optimize the performance parameters of modern computer systems. Theoretically and practically, they will get acquainted with containerization as the most effective technology today for the management of complex computer systems and with specific technologies of cloud systems. Finally, they will learn the principles and gain practical skills in the use of modern integration and development tools (Continuous integration and development). NI-VYC Computability Z,ZK Classical theory of recursive functions and effective computability.
